THE HISTORY OF THE
CITY OF BOSTON
FROM 1630 TO 1800

The city of Boston, founded in 1630, has a rich and varied history. It was the first city in North America to have a city government, and it was the first city to have a city seal. The city was founded by a group of Puritan settlers, and it grew rapidly in the 17th century. It was the site of the Boston Tea Party in 1773, and it was the site of the Battle of Boston in 1775. The city was the center of the American Revolution, and it was the site of the signing of the Declaration of Independence in 1776. The city was the site of the Boston Massacre in 1770, and it was the site of the Boston Convention in 1780. The city was the site of the Boston Convention in 1780, and it was the site of the Boston Convention in 1780. The city was the site of the Boston Convention in 1780, and it was the site of the Boston Convention in 1780.

PRAEFATIO.

Librum Tibi offero, benevole lector! e studiis et laboribus assiduis multorum annorum ortum, in quo omnia, quae de familia Heliceorum ad hunc diem mihi innotuerunt — exclusis speciebus, quae statu fossili solummodo cognitae sunt —, ordine systematico redigere suscepi. Maximam partem specierum, quas descriptas invenies, ipse in collectione servo, permultas, quas nondum possideo, in Musaeis, praecipue Londinensibus, examinaui et novas, methodo adoptatae congruas, diagnoses earum conscripsi. Illas species, quas sufficienter exacte examinare mihi non contigit, cum originaria auctoris descriptione eo, qui aptus mihi videbatur, loco inserui, signoque † notavi. Cuidam reliquarum descriptioni indicationem adieci Musaei, in quo specimina typica reperiuntur, vel numerum, sub quo in collectione mea servantur.

Synonymiam, quantum fieri poterat, completam dedi, ommissa tamen, quo spatio parcerem, synonymorum antiquiorum et recentiorum copia a Cleminitzio, Lamareckio et Deshayesio jam citatorum. Ea tantum ex illis citavi opera, quae ad specierum cognitionem accuratiorem aut descriptionibus aut figuris bonis utiliter conferre possunt, vel nomine diverso species designarunt.

Mensurae singularum specierum in universum e speciminibus typicis desumtae sunt, ut proportiones longitudinis et latitudinis, vel diametri majoris, minoris et altitudinis, vel aperturae, ad specimina majora vel minora facile reduci possint. Mensura usus sum a Gallis nunc universaliter adoptata, quippe quae unica invariabilis et ubique nota mihi videbatur. Rationem progressus anfractuorum (conf. Pfr. Symb. II. p. 6.) in illis casibus addidi, quibus ad diguoscendas species affines majoris momenti eam esse observavi.

In testis heliciformibus a me descriptis diametrum majorem, minorem et altitudinem iudicavi, illum metiens a parte antica aperturae (incluso peristomate) ad punctum peripheriae anfractus ultimi illi oppositum; diameter minor mihi est dimensio testae angulum rectum cum illo formans; altitudinem in his mensus sum a vertice ad basin axis (nec ad basin aperturae). — In testis buliformibus longitudinem indicavi et diametrum, illam metiens a vertice ad basin aperturae (incl. perist.), diametrum autem nominavi lineam suturae subparallelam, a peristomatis margine supero usque ad convexitatem oppositam anfractus ultimi. — In testis fusiformibus plerumque locum indicavi, quo diametrum maximum, cum axi angulum rectum formantem, mensus sum: vel in medio testae vel in anfractu penultimo, etc.

Terminologia in describendis testis usus sum ab O. F. Müller primum exactius adhibita et a Rossmässler (Iconogr. I. p. 26—38.) optime exposita.

Quidquid de speciebus hodie parum vel omnino non cognitis tempus mihi docuerit, serius in supplemento Tibi proponam.

Praemissis his paucis librum Tibi trado, benevole lector, orans, difficultatum sis memor, quae in elaborando ejusmodi opere superandae fuerunt, et mendis vel erroribus indulgeas, quibus Monographiam meam haud expertem esse persuasus sum.

Cassellae, mense Augusti 1847.

L. Pfeiffer, Dr.

INTRODUCTIO.

§. 1.

Familiae Heliceorum definitio.

Helicea (sc. Mollusca) mihi sunt familia altera Gastropodum cocloporum gymnostomorum tetracerorum (Conf. Pfr. Symb. I. p. 4.), characteribus sequentibus ab omnibus aliis distincta:

Animal hermaphroditum, aërem pulmonibus spirans, cephalophorum, tentaculis 4 retractilibus, superioribus 2 majoribus, apice oculatis, inferioribus 2 minoribus (in speciebus nonnullis minutis generis Pupae s. Vertiginis [sed non in speciebus generis Partulae Fér.] vix conspicuis vel obsoletis) instructum, solea lata corporis glutinosi repens, visceribus in cono dorsali spirali, magis minusve elongato, testa spirali munito, positis.

Limacea, priorem ejusdem Tribus (Tetracerorum) familiam sistentia, modo testa spirali deficiente vel obsoleta ab Heliceis diversa sunt, reliquae autem Coelopnorum non operculatorum familiae, tribum *Dicerorum* constituentes, tentaculis 2 contractilibus (nec retractilibus), basi interna (*Auriculacea*) vel externa (*Limnaeacea*) oculatis facile distinguuntur.

§. 2.

Synonyma familiae.

Familia nostra fere ab omnibus auctoribus recentioribus eodem vel latiore sensu adoptata, sed variis nominibus designata, varioque modo divisa est:

1) Cl. Draparnaud 1806 (Hist. nat. p. 23.), qui nomini-bus familiarum nundum usus est, Gastropoda testa inoperculata (vel nulla) terrestria quadritentaculata divisit in: *a. nuda* (genus: *Limax*) et *b. testa munita* (genera: *Testacella*, *Vitrina*, *Helix*, *Succinea*, *Bulinus*, *Pupa*, *Clausilia*). — Sectio altera (excl. *Testacella*) = *Helicea* emend.

2) Primus Cl. Lamarck 1809 (Phil. zool.) sub nomine gallico: *Colymacés*, familiam constituit primam Gastropodum spirali-um absque siphone, genera complectentem sequentia: *Helicem*, *Amphibulimum*, *Holicinam* *), *Achatinam*, *Bulinum*, *Pupam*. —

*) De *Helicinæ* animalæ et operculo illo tempore nihil cognitum erat.

Anno 1812 (Extrait du Cours de Zool. du Mus. d'hist. nat.) celeberrimus auctor eandem familiam (primam Trachelipodum) divisit in: *a. quadricornia* (genera: Helix, Helicella, Helicina, Pupa, Bulimus, Amphibulimus, Achatina) et *b. bicornia* (genera: Cyclostoma, Vertigo, Auricula). — Simili modo auctor 1822 (Hist. nat. d. anim. s. vert. vol. VI. P. 2. p. 61, ed. Desh. vol. VIII. p. 10.) nomine: *Colimacés* primam familiam Trachelipodum phytophagorum sic divisit: *a. tentaculis 4* (genera: Helix, Carocolla, Anostoma, Helicina, Pupa, Clausilia, Bulimus, Achatina, Succinea), et *b. tentaculis 2* (genera: Auricula, Cyclostoma). — Vitrina a Lamarckio familiae Limaceorum adnumeratur. — Familia Lamarckiana sub nomine: *Colimacea* eadem latitudine a Jay (Catal. 1839) adoptata, ab aliis sensim depurata et emendata est.

3) Cuvier 1817 (Règne animal II. p. 404.) inter Pulmonata terrestria genus *Helicem* sensu lat. habet, cujus subgenera sunt: Helix, Vitrina, Bulimus, Pupa, Scarabus, Chondrus, Succinea, Clausilia et Achatina. In editione altera (1830.) Carocollam et Anostoma subgeneribus addit et Scarabum eliminat, qua emendatione genus familiae nostrae satis bene respondet.

4) Férussac 1819 (in Prodr. p. 18.) et 1821 (Tabl. syst. p. XXXI.) subordinem Pulmonatorum non operculatorum geophylorum in duas familias divisit, quarum altera: *Cochleae* exacte omnia genera a me in familia Heliceorum adoptata complectitur. Claro autem auctori genera sunt: *a. tetracera*: Helicarion, Helicolimax, Helix (subgenera: Helicophanta, Cochlohydra, Helicogena, Helicodonta, Helicigona, Helicella, Helicostyla, Cochlostyla, Cochlitoma, Cochlicopa, Cochlicella, Cochlogena, Cochlodonta, Cochlodina) et *b. dicera*: Vertigo, Partula. — Genus Polyphemus Montf. in tab. synopt. p. 19 adoptatum serius (p. 50. et tabl. syst. p. XXXII.) Helici iterum iungitur.

5) Schweigger 1820 (Naturgesch. p. 741.) in Coelopnois terrestribus genus *Helicem* adoptat, Cuvieriano simile, cujus subgenera sunt: Succinea, Scarabaea, Chondrus, Pupa, Bulimus, Helix, Vitrina.

6) Studer 1820 (Syst. Verz. p. 44.) familiam una cum Limaccis in genere *Glischri* comprehendit, cujus subgenera haec sunt: Limax, Hyalina, Tapada, Helix, Bulinus, Pupa, Torquilla, Clausilia.

7) W. Hartmann 1821 (Neue Alpina I. p. 200.) Helicea nostra et Limacea comprehendit in Gastropodibus Adelobranchiis terrestribus et amphibiiis. Genera ei sunt: Clausilia, Chondrus, Pupa, Bulinus, Helix, Limacina, Limax, Limacia et Amphibina. — Eodem anno (in Sturm's Fauna Deutschl. Abth. VI. H. 5. p. 54.) generibus addit Daudebardiam.

8) Blainville 1824 (Dict. d. sc. nat. tom. 32. p. 247.) et 1825 (Man. de Malac. p. 454.) tertiam familiam Pulmobranchia-

torum *Limacinea* habet. Genera sunt: a. *Succinea*, *Bulimus*, *Achatina*, *Clausilia*, *Puppa*, *Tomogerus*, *Helix* — b. *Helicolimax*, *Testacella*, *Parmacella*, *Limacella*, *Limax*, *Onchidium*.

9) Rizzo 1826 (Hist. IV. p. 58.) familiam *Helicidarum* in *Adelobranchiis* constituit, cujus genera sunt sequentia: *Succinea*, *Helicogena*, *Helix*, *Cantareus*, *Helicodonta*, *Helicigona*, *Hygromia*, *Helicella*, *Theba*, *Cochlicella*, *Bulimulus*, *Rumina*, *Cochlicopa*, *Ferrusacia*, *Acicula*, *Vediantius*, *Orbitina*, *Crenea*, *Saraphia*, *Clausilia*, *Pegea*, *Jaminia*.

10) C. Pfeiffer 1828 (Naturg. III. p. 3 et 55.) in universum methodum *Ferussacianam* adoptat. Male autem praeter *Helicophantam*, *Vitrinam*, *Succineam*, *Helicem* et *Vertiginem Cochlearum* generibus etiam adnumerat *Carychium* et *Cyclostoma*.

11) Menke 1828 (Synops. p. 8.) familiam *Helicearum* (secundam *Geophilidarum*) dividit in: a. *tetraceras* (genera: *Helicarion*, *Vitrina*, *Daudebardia*, *Succinea*, *Helix*, *Carocolla*, *Anostoma*, *Bulimus*, *Achatina*, *Clausilia*, *Pupa* et b. *diceras* (genera: *Vertigo*, *Partula*). — In secunda editione 1830 eadem distributio servata est mutatis nominibus in: *Geophila* et *Helicea*.

12) Fleming 1828 (Brit. anim. p. 255.) *Helicidas* priorem subfamiliam *Cochleadarum* inoperculatorum habet. Genera: *Carocolla*, *Helix*, *Bulimus*, *Achatina*, *Succinea*, *Vitrina*.

13) Rang 1829 (Manuel p. 136.) familiam *Ferussacianam* adoptat (*les Limaçons*). Genera ei sunt: *Vitrina*, *Helix*, *Vertigo* et *Partula*.

14) Deshayes 1830 (Encycl. méth. II. p. 552. tabl.) in secunda familia *Pulmobranchiatorum* genera admittit: *Vitrinam*, *Helicem*, *Anostoma*, *Bulimum*, *Succineam* et *Pupam*.

15) Cristofori et Jan 1832 (Catal. p. 1.) genera *Heliceorum* in familia secunda et tertia *Pulmonatorum* terrestrium enumerant. Familia secunda: *Helicoidea* (genera: *Helicophanta*, *Vitrina*, *Helix*); familia tertia: *Cochloidea* (genera: *Achatina*, *Polypheumus*, *Columna*, *Bulimus*, *Pupa*, *Vertigo*, *Chondrus*, *Clausilia*, *Succinea*).

16) Wiegmann 1832 (Handb. d. Zool. p. 523.) in secunda familia *Pulmonatorum* — *Helicinis* — genera habet: *Vitrinam*, *Succineam*, *Helicem*, *Bulimum*, *Pupam*, *Clausiliam*, *Vertiginem*.

17) Fitzinger 1833 (Syst. Verz. p. 92.) *Helicoidea* et *Cochloidea* Crist. et Jan nomine *Helicoideorum* comprehendit. Genera in Austria obvia: *Helix*, *Conulus*, *Pyramidula*, *Monacha*, *Helicella*, *Latomus*, *Isognomostoma*, *Trigonostoma*, *Chilostoma*, *Gonyodiscus*, *Discus*, *Vitrea*, *Aegopis*, *Oxychilus*, *Helicopsis*, *Clausilia*, *Fusulus*, *Styloides*, *Bulimus*, *Torquilla*, *Cylindrus*, *Pupa*.

18) Beck 1837 (Ind. moll. p. 1.) *Heliceorum* genera in familia *Cochleadeorum* comprehendit et in quatuor tribus dividit,

quibus nomina: *Vitrinida* (genera: *Vitrina*, *Helieariou*, *Helieopsis*, *Nanina* cum 3 subgeneribus, et *Stenopus*), *Helicida* (genera: *Daudebartia*, *Helix* cum 45 subg., et *Artemon*), *Bulimida* (genera: *Bulinus* eum 20 subg., *Achatina* cum 10 subg., *Pupa* eum 11 subg., *Clausilia* cum 3 subg.), *Succinida* (genus: *Succinea* eum 4 subgeneribus).

19) Charpentier 1837. (Catal. des moll. terr. et fluv. de la Suisse) inter mollusca terrestria sequentia adoptat genera Heliceis adnumeranda: *Vitrinam*, *Succineam*, *Helieem* (subgenera: *Helix* Fitz., *Cryptomphalus* Agass., *Chilostoma* Fitz., *Trigonostoma* Fitz., *Carocolla* Lam., *Conulus* Fitz., *Helicella* Fitz., *Delomphalus* Ag., *Hyalinia* Ag.), *Bulimum* (subgenera: *Polyphemus*, *Folliculus* Ag., *Bulimulus*), *Pupam* (subg. *Eueore* Ag., *Sphyradium* Ag., *Chondrus* Cuv.), *Clausiliam*, *Vertiginem*.

20) Held 1837 (*Isis* p. 903.) Pulmonaceorum familias enumerat: *Helices* (genera: *Cepaea*, *Coenatoria*, *Cingulifera*, *Corneola*, *Lenticula*, *Xerophila*, *Fruticicola*, *Trochiscus*, *Gonostoma*, *Tragomma*, *Patula*, *Polita*), *Bulimos* (genera: *Zebrina*, *Merdigera*), *Pupas* (genera: *Gonodon*, *Granaria*, *Orcula*, *Torquatella*). — Reliquae familiae publico non traditae sunt.

21) D'Orbigny 1837. (Moll. canar.) nomen gallicum familiae male vertit in: *Colimacidae*. Eodem nomine 1841 (Moll. eub. I. p. 137. 140.) in secunda familia Pulmonobranchiatorum genera admittit: *Vitrinam*, *Succineam*, *Helieem*, *Achatinam*, *Bulimum*, *Pupam*, *Clausiliam*.

22) Potiez et Michaud 1838 (*Galérie de Douai* I. p. 64.) in familia *Cochlearum* genera habent sequentia: *Vitrinam*, *Succineam*, *Helicem*, *Achatinam*, *Bulimum*, *Pupam*, *Clausiliam*, *Vertiginem*, *Partulam*.

23) Sowerby 1839 (*Conch. Man.*) et 1842 (ib. ed. II. p. 112.) familiam *Colimaceorum* in Trachelipodibus adoptat et in 3 sectiones dividit, quarum prima genera continentur sequentia: *Succinea*, *Helix*, *Anastoma*, *Streptaxis*, *Bulinus*, *Achatina*, *Pupa*, *Clausilia*. (In secunda et tertia sectione Auriculacea et Cyclostomacea tractantur.) — In explicatione figurarum (p. 302.) genera adduntur sequentia: *Proserpina*, *Polygyra*, *Carocolla*, *Achatinella*, *Polyphemus*, *Azeea*, *Alaea*, *Vertigo*, *Megaspira*, *Balea* et (p. 311.) *Stenopus*.

24) Gray 1840 (*Manual* p. 101.) in Pneumonobranchiatis inopereculatis terrestribus duas familias distinguit: *Arionidas* et *Helicidas*, quarum in subfamiliis *Limacinorum*, *Vitrininorum*, *Testacellinorum* et *Helicinorum* sequentia tractantur genera: *Limax*, *Vitrina*, *Testaeella*, *Helix*, *Zonites*, *Succinea*, *Bulinus*, *Zua*, *Azeea*, *Achatina*, *Pupa*, *Vertigo*, *Balea*, *Clausilia*. — In Synopsi Mus. Brit. (ed. 1840 et) 1842 (p. 67 et 90.) systema ab auctore fusius expositum est. Genera a me Heliceis adscripta in duabus familiis

tractata sunt, quarum utraque genera comprehendit nuda et testa praedita. In familia *Arionidarum* genera sunt sequentia: *a.* Arion, Phosphorax, *b.* Helicarion, *c.* Nanina, Stenopus, *d.* Zonites — in familia *Helicidarum* haec: *a.* Limaecellus, Scutelligera (e classe Molluscorum jamdiu eliminata), Mehimatium (Meglimatium van Hass., Fér.), *b.* Limax, *c.* Parmacellus, Cryptella, Pectella, Vitrina, Helicolimax, Omalonyx, *d.* Plectrophorus, *e.* Testacellus, *f.* Helix, Streptaxis, Anostoma, Helicodonta, Polydotes, Pleurodonta, Dentellaria, Carocolla, Iberus, Chilotrema, Odontostylus, Helicophanta, Tapada, Amphibulina, Epistylum, Mesomphyx, Proserpina, Delomphalus, Hyalina, *g.* Bulimus, Megaspira, Pupa, Abida, Clausilia, Balea, Siphonostoma, Bulimulus, Succinea, *h.* Achatina, Macrospira, Polyphemus, Achatinella.

25) J. D. W. Hartmann 1840 (Erd- und Süßsw. Gast. I. Syst. Uebers.) in Pneumoneatis Geophilis sequentia habet genera: Auriculam, Clausilian, Chondrum, Pupam, Bulimum, Helicem (cum subgen. plur.), Helicophantam, Testacellam, Vitrinam, Succineam.

26) Swainson 1840 (Treat. on Malac. p. 160 et 326.) in familia *Helicidarum* omnes sectiones Pulmonatorum comprehendit. Dispersa reperiuntur genera Heliceorum in subfamiliis *Limacinarum* (Vitrina, Stenopus, Succinea), *Lucerninarum* (Leistoma, Lucerna, Lucernella, Pusiodon, Thelidomus), *Helicinarum* (Helix, Geotrochus, Pupa, Helicella), *Achatinarum* (Clausilia, Bulimus, Achatina).

27) Reeve 1841 (Proc. Zool. Soc. p. 76.) et 1842 (Conch. syst. II. p. 64.) familiam *Colimaceorum* in Pulmobranchiatis habet. Genera: Helix, Carocolla, Anostoma, Pupa, Clausilia, Bulimus, Partula, Achatina, Succinea.

28) Gould 1841 (Invert. of Massach. p. 169.) eodem nomine *Colimaceorum* familiam designat, ex qua genera tractantur: Helix, Pupa, Bulimus, Succinea (et Auricula).

29) A. Catto 1845 (Conch. Nom.) omnino systema Reeveanum sequitur, addito genere Achatinella.

30) Agassiz 1847 (Nom. zool. Ind. univ.) nomen familiae mutandum proponit in: *Helicoidae*.

De omnibus hisce auctorum methodis et de vario modo, quo ipse familiam tractaverim, conferantur in Herrmannsen ind. gen. Malacoz. prim.: *Helicea*, *Helix* Cuv., *Colimacea* etc.

§. 3.

Genera adoptata.

Etsi in familia Heliceorum typi sufficientes existere videantur ad formanda et determinanda bona genera, tum ex animalium structura peculiari, tum e testarum figura, tamen difficillimum

est, immo forsán impossibile, circumscribere haec genera characteribus tam exactis, ut species nulla ambigua remaneat inter plura genera.

Nonnulla genera ab auctoribus proposita sunt, quae animalis structura bene distincta videntur, e. gr. *Ariophanta Desmoul.* (*Nanina Gray, Tanychlamys Bens.*), pallio laciniato et poro mucoso (uti *Arionis*), *Stenopus Guild.*, « cauda tentaculata, tentaculo subretractili, glandula ad basin posita » ab *Helice* — et *Glandina Schum.*, ore probosciformi bipartito ab *Achatina* diversae. Sed cum eo praesertim consilio librum meum conscripserim, ut omnes species testarum in collectionibus exstantium rite dignosci et determinari possint, species ex animalis structura ad genera illa pertinentes in aliis generibus loco testa eis assignata enumeravi, quia characteres non existunt, quibus testa *Ariophantae*, *Naninae* vel *Stenopodis* ab *Helice* distinguatur, et characteres generici *Glandinae* absque limite in eos *Achatinae* transeunt.

Quare genera *Heliceorum*, *Lamarekianis* quantum fieri poterat applicata, magis minusve exacte circumscripta, ad omnes species excipiendas a me adoptata, sequentia sunt: *Daudebardia*, *Vitrina*, *Succinea*, *Helix*, *Anostoma*, *Tomigerus*, *Streptaxis*, *Proserpina*, *Bulimus*, *Achatinella*, *Achatina*, *Gibbus*, *Pupa*, *Cylindrella*, *Balea* (includens *Megaspiram*), *Tornatellina* et *Clausilia*.

Generum characteres.

§. 4.

I. *Daudebardia* Hartm.

Testa perforata, cornea, depressa, paucispira, horizontaliter et rapide involuta, anfractu ultimo permagno; apertura obliqua, amplissima (Species vid. vol. II.).

Daudebardia Hartm. in Sturm Fauna Abth. VI. H. 5. 1821. p. 41.

— *Menke* Syn. p. 8. Ed. II. p. 14.

Helicophanta C. Pfr. Naturg. III. p. 3. 55.

— *Desh.* Encycl. méth. II. p. 269.

— *Hartm.* Erd- u. Stüssw. Gast. I. 4. p. 7. 10.

— *L. Pfr.* Symb. I. p. 5. II. p. 63. III. p. 45.

Daudebartia Beck ind. p. 5.

Genus transitum evidentem a *Limaceis* ad *Helicea* formans. Animal enim omnino limaciforme testam parvulam in parte posteriore gerit, nec ullam partem pedis in illa recondere potest. — Per-paucae modo ejus species notae sunt, testa a nonnullis *Helicis* cohortibus vix distinguendae. *Férussac* species 2 illo tempore cognitae monstruoso suo generi *Helicis* injunxit et una cum *Helice castra*, cornu giganteo et magnifico in subgenere *Helicophantae*

enumeravit. Hartmann primus genus distinctum esse agnovit, quod nomine *Daudebardiae* ornavit. Serius C. Pfeiffer de genere sub nomine *Helicophantae* tractavit, minus bene nomen Ferussacianum servans, quippe quod praeter Daudebardias etiam Helices veras comprehendit.

§. 5.

II. Vitrina Draparnaud.

Testa imperforata, tenuissima, depressa; spira brevis, anfractu ultimo magno; apertura magna, lunata vel rotundata, marginis columellari subinflexo, saepe membranaceo-marginato. (Spec. vid. vol. II.)

Vitrina Drap. hist. nat. p. 23 et 30.

— *Lam.* hist. vol. VI. 2. p. 52, ed. Desh. VII. p. 726.

Helicarion Fér. tabl. syst. p. XXXI. et Voy. de Freyc.

Helicolimax Blainv. in Dict. sc. nat. vol. 32. p. 254.

Vitrina, Helicarion et Simpulopsis Beck ind.

Helicarion, Vitrina et Helicolimax Gray Syn. Brit. Mus. 1842. p. 90.

Animal Limaceis etiam affine, testa sua majus, sed pallio antrorsum elongato, transversim rugato distinctum. Quoy et Gaimard similem pallii formationem in Helice citrina L. aliisque observantes, has species *Vitrinae* injunxerunt (sequente Anton Verz. p. 33.), quod non approbandum, quia pallium in illis laciniatum et reflexum est et testa quoque habitum Vitrinarum genuinarum non exhibet. E speciebus sic conformatis Desmoulins 1829 genus *Ariophantam*, Gray 1834 *Naninam* formavit, quod genus in systemate naturali, animalis structura modo fundato, servandum erit, in mea autem distributione (testarum cognitioni potissimum adaptata) Helici insertum est. — Férussac duo distinguit genera: *Helicarionem* (antea *Helicarion*), poro mucoso terminali instructum, et *Helicolimacem*, poro illo destitutum (genuinam Draparnaudii Vitrinam). Eum sequitur Beck, qui in tribu Vitrinidorum genera *Vitrinam*, *Helicarionem*, *Helicopsin* et *Naninam* admittit. Plerique autem auctores recentiores ambo

genera nomine *Vitrinae* conjunxerunt, id quod ego quoque feci, *Simpulopsin* Beckii (auctori subgenus *Succineae*), inter *Vitrinam* et *Succineam* ambiguam, sed ad *Vitrinam* ex mea sententia potius referendam, huic generi adnumerans. — Plures autem species ab auctoribus ob testae similitudinem *Vitrinae* adscriptae, praesertim capenses, ad *Helicem* forsitan meliore jure in posterum referentur.

§. 6.

III. Succinea Draparnaud.

Testa imperforata*), tenuis, ovata vel oblonga; spira parvula; apertura magna, oblique ovalis; columella simplex, acuta, recta; perist. simplex, acutum.

Helices Held in Isis 1837. p. 905.

(Reliqua synonym. vid. infra et in Herrmannsen Ind. gen.: *Helix*,
Nanina etc.)

Animal familiae typicum.

Genus tum numero specierum, tum variabilitate formarum excellens, in omnia genera affinia fere absque limitibus irradians, in §. 47 a Bulimorum §. 1 et §. 12 speciebus nonnullis omnino non distinguendum, altero latere transitus immediatos in Daudebardiam et Vitrinam offerens.

Genus *Helicis* uti primum a Linnaeo constitutum est, diversissimas complectitur testas, hodie Helici, Polydontae, Planorbi, Anostomati, Ampullariae, Janthinae, Paludinae, Bulimo, Melaniae, Limnaeae, Succineae, Clausiliae, Coriocellae, Sigareto et Fossaro adscriptas. — In emendato genere Mülleriano emissis Planorbe, Vertigine, Carychio et Buccino praeter *Helices* veras species adhuc restant Vitrinae, Anostomatis, Lanistae, Cyclostomatis, Bulimi, Polydontae, Succineae, Achatinae, Pupae, Auriculae, Clausiliae, Pyramidellae. — Scopoli primus 1786 Bulimum segregavit, tum Lamarek 1799 Helicinam et Sigaretum et 1804 Janthinam, Draparnaud 1804 Vitrinam et Succineam et 1805 Clausiliam, deinde Fischer 1807 Polydontam et Anostoma.

In genere *Helice* Fér. (1849) subgenera *Helicogena*, *Helico-*

donta, *Helicigona*, *Helicella* et *Helicostyla* genus a me adoptatum efforant.

In genere depurato Lamarckiano (1822.) *Helicella* antea (1812.) ab auctore separata iterum iungitur et bene segregatur *Anostoma*, male autem duce Schumacher *Carocolla*.

Alii auctores vario modo hoc genus in multa genera vel subgenera diviserunt, ex quibus huc referenda mihi videntur: *Pleurodonta* Fischer 1807 — *Caprinus*, *Caracolus*, *Cepolum*, *Polydotes*, *Iberus*, *Acavus*, *Zonites* Montf. 1810 — *Carocolla*, *Dentellaria*, *Otala* Schumacher 1817 — *Polygyra* Say 1817 — *Mesomphix*, *Odotropis* et *Chimotrema* Rafinesque 1819 — *Arianta*, *Chilotrema*, *Pomatia*, *Tachea*, *Teba*, *Zurama* Leach 1820 — *Helicogena*, *Cantareus*, *Helicodonta*, *Helicigona*, *Hygromia*, *Helicella*, *Theba* et *Vallonia* (?) Risso 1826 — *Solarium* Spix 1827 — *Stenopus* Guild. 1828 — *Ariophanta* Desmoulins 1829 — *Aplodon*, *Stenostoma*, *Toxostoma*, *Mesodon*, *Omphalina*, *Triodopsis*, *Xolotrema*, *Odomphium* Rafinesque 1831 — *Caracolla* Broderip 1832 — *Conulus*, *Pyramidula*, *Monacha*, *Helicella*, *Latomus*, *Isognomostoma*, *Trigonostoma*, *Chilostoma*, *Gonyodiscus*, *Discus*, *Vitreus*, *Aegopis*, *Oxychilus*, *Helicopsis* Fitzinger 1833 — *Nanina* Gray 1834 — *Drepanostoma* Porro 1836 — *Acave* Krynicki 1836 — *Cepaea*, *Coenatoria*, *Cingulifera*, *Corneola*, *Lenticula*, *Xerophila*, *Friticicola*, *Trochiscus*, *Gonostoma*, *Trugomma*, *Patula*, *Polita* Held 1837 — *Helicopsis*, *Microcystis*, *Nanina*, *Ariophanta*, *Stenopus*, *Helicella*, *Mesomphix*, *Zonites*, *Eryomphala*, *Sagda*, *Pityx*, *Turricula*, *Theba*, *Leucochroa*, *Ochtheophila*, *Bradybaena*, *Petasia*, *Daedalochila*, *Tridopsis*, *Polygyra*, *Circinaria*, *Macrocyclus*, *Campylaea*, *Soliroopsis*, *Iberus*, *Chilotrema*, *Caracollina*, *Vortex*, *Chloritis*, *Planispira*, *Obba*, *Ampelita*, *Caracolla*, *Polydotes*, *Labyrinthus*, *Pleurodonta*, *Dentellaria*, *Otala*, *Helicostyla*, *Acavus*, *Helicogena*, *Arianta*, *Galaxias*, *Pomatia*, *Polymita*, *Eurycratera*, *Stylodon*, *Helicophanta*, *Geotrochus* et *Orthostylus* (pars) Beck 1837 — *Helix*, *Cryptomphalus*, *Chilostoma*, *Trigonostoma*, *Carocolla*, *Conulus*, *Helicella*, *Delomphalus* et *Hyalinia* Agassiz et Charpentier 1837 — *Odontostylus* Gray 1840? — *Obelus*, *Oxymota*, *Euparypha*, *Helicella*, *Zonites*, *Lomastoma*, *Chilostoma*, *Actinota*, *Delomphalus*, *Aegopis*, *Oxylopha*, *Trigonostoma*, *Drepanostoma*, *Isognomostoma*, *Conulus*, *Plicaria*, *Calocochlea*, *Proteusia*, *Tachea*, *Helicogena*, *Arianta*, *Monacha*, *Trichia*, *Teba*, *Hyalinia*, *Chromocochlea*, *Columpica*, *Eulota*, *Gallina*, *Heterostoma* Hartm. 1840 — 44 — *Leiostoma*, *Lucerna*, *Caracolla*, *Discodoma*, *Lucidula*, *Lucernella*, *Polydotes*, *Lyrostoma*, *Polygyra*, *Lucidella*, *Pusiodon*, *Thelidomus*, *Helix*, *Hemicycla*, *Zonites*, *Epistyla*, *Hemitrochus*, *Geotrochus*, *Geomitra*, *Helicella* Swains. 1840. (De omnibus hisce nominibus conf. Agass. Nomencl. et Hermannsen ind., nec non ind. alphabeticus generum et subgenerum in fine vol. II.)

Férussac, Leach, Fitzinger, Held, Agassiz, Beek, Swainson et Hartmann subgenera ex affinitate naturali formare susceperunt, sed characteres eruere non potui, quibus cohortes *Helicum* affinitate vera junctarum claris verbis designari possint, quamobrem in *Helice*, sicut in *Bulimo* aliisque generibus, distributionem et ordinationem mere ex characteribus externis methodo artificiali desumsi, ut singulam speciem inter immensam descriptorum copiam inveniri facilius reddatur. (Conf. consp. specierum vol. I. p. 13.) Attamen characteres in multis speciebus ambigui et variabiles sunt, quamobrem in adnotationibus saepe locum indicavi, quo species proxime affines quaerendae sunt; in universum autem, si speciem tibi incognitam examinas, ex specierum illi evidenter affinium et jam rite determinatarum comparatione ejus locum in libro meo facile invenies.

§. 8.

V. Anostoma Fischer.

Testa orbiculata, spira convexa, obtusa; apertura sursum reversa, dentata vel edentula.

Anostoma Fisch. de Waldh. Mus. Demidoff. III. 1807.

— Lam. hist. VI. 2. p. 100. ed. Desh. VIII. p. 150.

— Sow. genera of shells fasc. VIII.

— Desh. in Encycl. méth. II. p. 51.

— Reeve Conch. syst. II. p. 73.

Tomogeres Montf. Conch. syst. II. p. 359.

Angystoma Schum. Essai p. 229.

Tomogerus Blainv. in Dict. d. sc. nat. vol. 32. p. 252.

Anastoma (subg. *Helicis*) Jan cat. 1832. p. 2.

— Swains. Elem. mod. Conch. 1835 et Malac. p. 129. 329.

— Sow. Conch. Man. ed. II. p. 65.

Genus persingulare, cui antea (Symb. III. p. 52. — *Tomogeres*) duce Beek (ind. p. 34.) species *Tomigero* clauso Spix analogas adnumeraveram. Apertura autem sursum reversa characterem praecipuum generis sistere videtur, quamobrem illas separavi et genus Spixianum restituendum censui. Tres solummodo *Anostomatis* species cognitae sunt, quarum 2 dentatae, altera major jam auctoribus veteribus nota, nunc in collectionibus rarissima, altera minor recentioribus temporibus frequenter e Brasilia allata, tertia edentula, quas descripsi in vol. I. p. 4.

§. 9.

VI. Tomigerus Spix.

Testa horizontaliter rimata, globoso-conica, compressa, scarabiformis; apertura verticalis, ringens. (Spec. vid. vol. I. p. 2.)

Tomigerus Spix test. bras. t. 15.

Genus bene circumscriptum, inter *Anostoma*, *Streptaxin* et

Bulimorum §. 17 intermedium, a Wagner et Moricand Helici adscriptum, a Beck cum Anostomate, a Deshayes cum Bulimo junctum, a Potiez et Michaud Auriculæ, a Reeve Scarabo insertum, huic quidem simillimum, at animalis structura omnino ab eo diversum.

§. 10.

VII. Streptaxis Gray.

Testa subglobosa, heliciformis, irregularis, anfractibus ultimis e superiorum axi recedentibus; apertura edentula vel dentata. (Species vid. vol. I. p. 3.)

Streptaxis Gray in Loudon's mag. New ser. I. p. 484.

— *Pfr.* Symb. I. p. 5 II. p. 109. III. p. 52.

Artemon Beck ind. p. 48.

Animal Helicis (Fér.) — Testa formæ singularis, sæpe quasi monstrosæ, tamen in singulis speciebus constantis. In omnibus spira regularis apparet, sed anfractus 2 ultimi vel ultimus modo ex axi superiorum discedunt et lateraliter vel deorsum vel fere retrorsum deviant. Umbilicus, qui in omnibus existere videtur, in multis deviatione anfractus ultimi comprimitur et in rimam transversalem transformatur. Peristoma in omnibus adultis expansum vel reflexum videtur, in junioribus sæpe varicosum. Apertura vel omnino edentula vel dente parietis aperturalis unico vel hoc et variis in peristomatis margine positis munitum.

§. 11.

VIII. Proserpina Guilding.

Testa depressa, helicinaeformis, basi callo nitido (sicut Rotellæ) obducta; apertura intus dentata; perist. simplex, acutum.

Proserpina Guilding mss. teste Cuming.

— *Sow.* Conch. Man. f. 274. Ed. II. p. 237.

— *Gray* Syn. Cont. Brit. Mus. 1840. Ed. 1842. p. 90.

— *Jonas* in Zeitschr. f. Malak. 1846. p. 10.

Odontostoma d'Orbigny moll. cub. I. (1844.) p. 237.

De nomine generis sequentia exponenda sunt: G. B. Sowerby (Conch. Man. 1839. f. 274.) figuram exhibet bonam speciei ejusdam sub nomino generico *Proserpinae*, sed characteres huic generi non assignat.* — Deinde idem nomen invenimus in Gray Syn. Brit. Mus. ed. 1840 et ed. 44. (1842.) p. 68 et 90 inter genera Helicidarum, sed de characteribus nihil exponitur. Ille

*) «*Proserpina Gray?* Fig. 274 represents a small shell belonging to the Helix tribe, to which it is believed, Mr. Gray has applied the name of *Proserpina nitida*. We do not know, how the genus is defined.» (Sow. Conch. Man. ed. II. p. 237.)

solum verba (p. 68.) leguntur: «the true Helices, Helicodonta etc. have the peristoma of the shell thickened, while the Helicophanta, Epistylum and Proserpina have it thin and sharp.» — Species a Sowerby figurata a Cuming serius mihi communicata est sub nomine *Proserpinae nitidae* Guild. miss., et Helicibus lamellatis eam adnumerans descriptionem dedi sub nomine Helicis Proserpinae. — Cl. Jonas (Zeitschr. f. Mal. 4846. p. 40.) genus *Proserpinae*, cujus speciem aliam antea Helicinae adscripserat, sustentandum censuit, cui opinioni (ibid. p. 42.) assenti. Serius autem cognovi, genus Cyclostomidarum, a Cl. d'Orbigny (moll. cub. I. p. 237.) nomine *Odontostomatis* *) bene descriptum esse idem, et sub hac denominatione species illi pertinentes (vol. I. p. 44 — 43.) descripsi. Attamen non solum ex prioritate publicationis (etsi vix legitimae), sed etiam quia nomen *Odontostoma* jam pluries in Zoologia usitatum est, nomen *Proserpinae* generi servandum censeo.

§. 42.

IX. Bulimus Scopoli.

Testa ovata, oblonga vel turrata; apertura longitudinalis marginibus inaequalibus, edentula vel dentata; columella integra, extrorsum revoluta vel subsimplex; perist. simplex vel expansum.

Bulimus Scop. delic. flor. et faun. Insubr. 1787. I. p. 67.

— Lam. Phil. zool. p. 320. Hist. VI. 2. p. 416. (ed. Desh. VIII. p. 248.)

— Blainv. in Dict. d. se. nat. vol. 32. p. 248.

— (gen.), *Chondrula* et *Cyclodontina* Beck ind.

— et *Partula* Reeve Conch. syst. II. p. 78. 82.

— Küst. in Chemn. ed. II. vol. I. Sect. 43.

Bulimus Stud. Verz. p. 47. sequent. Hartm., Charp., Broderip, Sowerby.

Bulimi Held in Isis 1837. p. 947.

(Reliqua synonym. vid. infra et in Herrm. ind.)

Genus characteribus ambiguis testae ab Helice distinctum, varie in alia genera transiens, ex habitu universali potissimum dignoscendum. Species typicae facile distinguuntur — ab Helicibus typicis: forma ovata vel elongata, apertura longitudinali — a Pu-

*) Coquille analogue à celle des Hélicines, toujours polie, brillante. Bouche semilunaire, toujours dépourvue de péristome; ses bords sont minces, non réfléchis; sa columelle ou plutôt le bord columellaire, est fortement encroûté, calleux; l'angle antérieur pourvu de dents internes se prolongeant à l'intérieur comme une lame saillante. — Nous ne pouvons laisser ce genre dans les Hélicines, ses dents s'opposant à ce que la coquille soit pourvue d'un opercule pierreux et triangulaire ou semilunaire; car alors les dents viendroient l'échaner. Le grand nombre de coquilles que nous avons examinées, nous prouverait au contraire, qu'il manque entièrement d'opercule. (Orb. l. c.)

pis: peristomatis marginibus inaequalibus — ab Achatinis: columella nunquam involuta, nec vere truncata, etc. Sed formae intermediae ubique adsunt, quae diagnosin exactam generis ab istis, nec non ab Achatinella, Balea, immo a *Cylindrella* prohibent. Quare characteres generici a me praemissi semper typum modo generis exhibent, cui species aberrantes magis minusve exacte adaptari possunt.

Genus a me adoptatum sequentia complectitur: species *Helicis*, *Bullae*, *Buccini*, *Turbinis* Linn., Chemn., Müll., Gmel. etc., species *Bulimi* Brng. *), *Bulimos* Lamarckii (exclusis nonnullis, Pupae et Achatinae adnumerandis, inclusis autem ejusdem auctoris *Auriculis* nonnullis), *Helicis* Fér. subgenera: *Cochlostylam*, *Cochlicellam* et *Cochlogenam*, nec non genus *Partulam* Fér. et Auct. Angl. (ex erronea observatione animalis, quod 2 modo tentaculis praeditum dictum erat, ortum). — Praeterea genus ex Bruguierei tempore vario modo divisum et dilaceratum est. Genera et subgenera, quae a *Bulimis* separari non posse credo, sunt sequentia: *Bulimulus* Leach 1814 — *Limicolaria* Schumacher 1817 — *Elisma*, *Ena* Leach 1820 — *Hemiloma* Rafin. (?) 1820 — *Cochlicella*, *Bulimulus*, *Rumina*, *Orbitina* Risso 1826 — *Strophocheilus*, *Navicula*, *Auris*, *Columna*, *Stenostoma* Spix 1827 — *Macroceramus*, *Pelekocheilus* Guilding 1828 — *Peristoma*, *Chondrus* Kryn. 1833 — *Cylindrus* Fitzinger 1833 — *Longaeva* Mühlf. — *Orthostylus* (pars), *Bulinus*, *Gonyostomus*, *Odontostomus*, *Pelekocheilus*, *Otostomus*, *Pachyotus*, *Placostylus*, *Partulus*, *Plectostylus*, *Orthalicus*, *Limicolaris*, *Obeliscus*, *Cochlicellus*, *Bulimulus*, *Buliminus*, *Brephulus*, *Mastus*, *Macroceramus*, *Chondrula*, *Cyclodontina* Beck 1837 — *Merdigera*, *Zebrina* et *Gonodon* Held 1837 — *Bulimulus* et *Eucores* Ag. et Charp. 1837 — *Pythohelix* (?), *Macrodon*tes, *Auricula*, *Bulinus*, *Bulimulus*, *Leptospira*, *Goniostoma* Swainson 1840 — *Helicobulinus* Broderip 1840. — Subgenera a Hartm. (1840. Syst. Uebers.) enumerata: *Lycta*, *Ena*, *Azeca*, *Folliculus*, *Belonis*, *Rumina*, *Cochlicella*, partim ad *Bulimum*, partim ad *Achatinam* referenda sunt.

Species in libri mei vol. II. recensitae ex systemate mere artificiali ordinatae sunt.

§. 13.

X. Achatinella Swainson.

Testa imperforata, bulimiformis; columella basi vel medio in dentem validum, interdum tortum, lamelliformem producta;

*) Genus *Bulimi* Bruguiereanum diversissimas comprehendit testas, hodie generibus *Bulimo*, *Ampullariae*, *Amphibolae*, *Pupae*, *Limnaeae*, *Bulino* Adans., *Succineae*, *Amphipepleae*, *Melaniae*, *Carychio*, *Achatinae*, *Melanopsi*, *Chilinae*, *Tornatellae*, *Auriculae*, *Pedipedi*, *Polydontae*, *Clausiliae*, *Pyramidellae* adscribendas.

apertura longitudinalis, lunaris; perist. simplex vel labiatum, marginibus inaequalibus. (Species vid. vol. II.)

Achatinella Swains. in Quarterly journ. 1828. vol. XXV. p. 84.

— *Pfr.* in Proc. Zool. Soc. 1843. p. 89.

Helicis subg. *Cochlogenae* sect. *Helicteres* Fér.

Helicteres Beck ind. p. 54.

Omnes species huc relatae habitu totali inter se tam affines sunt, ut genus naturale optime limitatum, inter *Bulinum* et *Achatinam* intermedium constituere videantur, etsi characteres in diagnosi haud stricte enumerari possint. Cl. Férussae species illo tempore notas in sectione: *Helicteres* subgeneris *Cochlogenae* comprehendit et 1824 (in Voy. de Freyc.) eodem nomine eas descripsit. Swainson primus fuit, qui in genere *Achatinellae* eas a *Bulinis* separavit, sequentibus recentissimis auctoribus pluribus. Ab aliis species tum *Bulino*, tum *Achatinae* (immo a Cl. Lamarek *Monodontae*) adscriptae sunt, et Beck in subgenere secundo *Bulimi* (*Helicteres*) eas collegit. — Duce Férussae dividi possunt ex forma, praeterea secundum structuram testae.

§. 14.

XI. *Achatina* Lamarck.

Testa imperforata, buliniformis; columella intorta, versus basin aperturae truncata; apertura ovalis vel oblouga, superne angulata; perist. simplex, acutum. (Spec. vid. vol. II.)

Achatina Lam. Prodr. d'une nouv. class. des coq. 1799.

— *Cuvier* règne animal II. p. 409. (Ed. Voigt III. p. 95.)

— *Lam.* hist. VI. 2. p. 426. ed. Desh. VIII. p. 293.

— *Blainv.* in Dict. d. sc. nat. I. suppl. p. 78. vol. 32. p. 249.

— *Deshayes* in Encycl. méth. II. p. 8.

— *Küster* in Chemn. ed. II. vol. I Sect. 43.

Conf. Hermannsen ind. I. p. 9—12.

Genus *Bulimo* valde affine et transitus insensibiles exhibens. Species primum notae a veteribus tum *Bullae*, tum *Buccino*, *Helici* et *Volutae* adscriptae sunt. Bruguière eas in genere suo *Bulimi* enumeravit et Humphrey primus 1797 eas in genere *Chersina* separasse videtur. Lamarck autem verus generis *Achatinae* auctor est, quippe qui (jam 1799) primam definitionem scientificam proposuit. Ferussacii subgenera *Helicis*: *Cochlitoma* et *Cochlicopa* easdem sectiones sistunt, quas plerique nunc nominibus *Achatinae* et *Glandinae* designare solent. Praeterea genera et subgenera aliorum, a me huc relata, sequentia sunt: *Achatinus*, *Liguus*, *Polyphemus* Montf. 1810 — *Columna* Perry 1811 — *Glandina* Schumacher 1817 — *Zua* Leach 1820 — *Cochlicopa*, *Acicula*, *Ferussacia*, *Vediantius* et *Pegea* (?) Risso 1826 — *Cionella* Jeffreys 1829 — *Styloides* Fitzinger 1833 — *Chersina*,

Achatina, *Columna*, *Subulina*, *Glandina*, *Acicula*, *Leptinaria* (?) et *Cionella* Beck 1837 — *Polyphemus* et *Folliculus* Agass. et Charp. 1837 — *Macrospira*, *Cochlycopa*, *Achatina* Swains. 1840. — De *Azece* Leach diu dubitans haesi, donec praesertim ex cognitione *Achatinae* tornatellinae Lowe, inter *Achatinas* duce Rossinässler eam recipiendam, sectionemque dentatarum pro ea instituendam esse censuerim. (Conf. Pfr. in Zeitschr. f. Mal. 1846. p. 150.) — *Glandinas*, antea a me quoque generice distinctas, tanquam sectionem solummodo adoptavi, quia permultae species omnino intermediae existunt. — De genere *Priamo* Beckii, a plerisque huc relato, conferantur, quae exposui in descriptione *Achat. Priami* Meusch. (vol. II.)

§. 15.

XII. Gibbus Montfort.

Testa transverse et profunde rinata vel perforata, triangularis, a latere compressa, margine aperturae opposito in gibbum acutiusculam dilatata; apertura subtetragono-ovalis, marginibus parallelis, subaequalibus; perist. incrassatum.

Gibbus Montfort Conch. syst. II. p. 302.

— Herrmannsen ind. gen. Malac. I. p. 473.

Genus a *Pupa* non minus bene distinctum, quam *Streptaxis* et *Tomigerus* ab *Helice* et *Bulimo*. Species altera jamdudum nota primum a Pallas, Férussac, Dillwyn et Wood Helici, a Chemnitz et Gmelin Trocho, a Bruguière et Lamarck Bulimo, a Blainville Pupae, a Beck Gibbulinae, a Potiez et Michaud et Küster Pupae, a Sowerby Bulino inserta est, altera a Küster figurata, bene distincta mihi videtur. (Descriptionem specierum conf. in vol. II.)

§. 16.

XIII. Pupa Draparnaud.

Testa rimata vel perforata, cylindrica, ovata vel buliniformis; apertura subirregularis, semiovalis vel subrotundata, edentula vel dentata; perist. subsimplex vel expansum, marginibus aequalibus, subparallelis, distantibus, plerumque lamina callosa junctis. (Spec. vid. vol. II.)

Pupa Draparn. hist. p. 24 et 29. *)

— Lam. hist. VI. 2. p. 103. ed. Desh. VIII. p. 165.

— Reeve Conch. syst. II. p. 74.

— Küster in Chemn. ed. II. vol. I. Sect. 15.

*) Quamvis genus *Vertigo* Müll., quod *Pupae* injunxi, prioritatem gaudeat haud dubia, tamen hoc nomen anteponeere nolui, quia Müllerus animali generis sui duo modo tentacula expressissimis verbis postulat.

Puppa Blainv. in Dict. sc. nat. vol. 32. p. 206. Malac. p. 457.

Vertigo Müll. verm. II. p. 124.

(De reliquis auctoribus et synonymis conf. Herrmannsen ind. II.)

Genus a Draparnaud (praecedente Humphrey) bene constitutum, initio (1804. tabl.) Clausilias etiam complectens, serius (hist.) ab illis depuratum. Species, a veteribus Turbini, Trocho, Helici adscriptae, partem adhuc formant generis *Bulimi* Brug., deinde autem a Férussac eadem fere latitudine, quam hodie generi Pupae tribuo, in subgenere *Cochlodontae* enumeratae sunt. — E genere Draparnaudiano Cuvier sub nomine *Chondri* junxit species magis ovatas, inter se valde diversas, quarum plerasque (genus *Torquillae* Stud.) Pupis, alias (typum generis *Chondrulae* Beck) Bulinis adscribendam censeo. In eodem sensu genus vel subgenus *Chondri* a Charpentier, Hartmann*) et aliis adoptatum est, Krynicki autem Chondrum tridentem Cuv. pro typo generis assumsit, speciesque huic affines *Chondro* adscripsit, quem mutato nomine (*Chondrulae*) secutus est Beck. — Praeterea genera et subgenera a Pupis segregata sunt sequentia: *Abida*, *Pupilla* Leach 1820 — *Alaea* Jeffr. 1820 — *Jaminia*, *Saraphia* (?) Risso 1826 — *Granaria*, *Orcula*, *Torquatella* Held 1837 — *Sphyradium* et *Chondrus* Agass. et Charp. 1837 — *Gibbulina*, *Pupilla*, *Vertigo*, *Alaea*, *Torquilla* Beck 1837 — *Gonidomus*, *Plicadomus*, *Gonospira*, *Pupella*, *Eruca* Swains. 1840 — *Cylindrus*, *Sphyradium*, *Pupilla*, *Vertigo*, *Dontostoma* Hartm. 1840 — *Deloplecta* et *Hercodonta* Ag. teste Herrm. ind.

Genus *Vertiginis* Müll. Pupae injunxi, quia testae nullo modo distingui possunt. Animal Vertiginis revera 2 modo tentaculis bene conspicuis instructum est; existunt autem plures Pupae species minutae, quarum tentacula inferiora sensim minora observantur, donec tandem in Vertiginibus genuinis omnino inconspicua sint.

Mermet genera Pupae, Vertiginis, Clausiliae et Balcae sub nomine *Stomodontae* in uno genere comprehendere proposuit, quod minime laudandum.

§. 17.

XIV. *Cylindrella* L. Pfeiffer.

Testa cylindracea vel pupaeformis, multispira, plerumque truncata; apertura subcircularis; perist. expansum, continuum vel in speciebus anomalis (§. 7.) subinterruptum.

Cylindrella Pfr. in Wiegmann. Arch. 1840. I. p. 44.

— Pfr. Symb. I. p. 6. II. p. 136. III. p. 62.

*) Hartmann (1840. Syst. Uebers.) tria subgenera *Chondri* distinguit: *Chondrum*, *Torquillam* et *Astrodontam*, quorum species typicas non novi.

Cylindrella Pfr. in Phil. Abbild. I. 8. p. 179.

Brachypus Guild. in Zool. Journ. IV. 44. p. 167.

Urocoptis, *Brachypodella*, *Apoma* Beck ind.

Siphonostoma Guild. Swains. Malac. p. 168. 333.

Genus quoad formas typicas optime distinctum, attamen per formas anomalas Pupae et Bulino approximatum. — Guilding primus 1828 speciem typicam novi generis *Brachypodis* descripsit, sed teste Swainson (Malac. p. 168.) hoc nomen Zoologis jam pluries usitatum serius reliquit et *Siphonostomatis* *) nomen generi tribuit, quod eodem anno prelo publicatum est, quo ipse genus sub nomine *Cylindrellae* descripsi.

Species huc pertinentes a veteribus Buccino, Helici et Turbini, a Férussac Cochlodinae, a Lamarck et aliis Clausiliac et Cyclostomati, a Gray, Deshayes, Sowerby et aliis Pupae insertae sunt. — Beck eas in subgeneribus Pupae: *Urocopti* et *Brachypodella* (*Brachypodisca* ex Agassizii emendatione) et in subgenere Clausiliae: *Apomate* dispersit. — Villa tandem species nonnullas Baleae, aliamque Torquillae inseruit. — Species hodie novi fere 50, in volumine II. descriptas.

§. 18.

XV. Balea Prid. mss. Gray.

Testa clausiliaeformis vel clavata, multispira; apertura semiovalis vel subpyriformis; perist. expansum, marginibus inaequalibus; paries aperturalis subnultiplicatus; columella simplex (*Balea* genuina) vel transverse plicata (*Megaspira* Lea). Spec. vid. vol. II.

Balea Gray in Zool. Journ. I. 4. p. 64.

Balaea Leach, Alder etc.

Fusulus Fitzinger syst. Verz. p. 105.

Balia Swains. Malac. p. 182. 334.

Balea et *Pyrgelix* Beck ind.

Megaspira Lea obs. II. p. 24.

Characteres vix adsunt, quibus hoc genus a Bulimis exacte dignosci possit, quare habitum et lamellam parietalem hic maximi momenti haberi necesse est. Habitus potius est Puparum et Clausiliarum; a Pupa autem marginibus aperturae inaequalibus, a Clausilia deficiente clausilio et plicis essentialibus facile distinguitur. *Megaspira* Lea characteribus modo specificis, nec vero genericis a Balea differt, quare hoc genus Baleae injunxi. — Species europaea jamdudum nota ab aliis Pupae, ab aliis Clausiliae adscripta est.

*) Nomen *Siphonostoma* etiam prius (1820.) a Cl. Otto (Act. Leopold. X.) generi novo Vermium Abranchorum jam impositum est.

§. 49.

XVI. Tornatellina Beck.

Testa imperforata, ovata vel elongata; apertura semilunaris, marginibus inaequalibus, disjunctis; columella torta, truncata; paries aperturalis unilamellatus. (Spec. vid. vol. II.)

Tornatellina (subg. *Achatinae*) Beck ind. p. 80.

— *Pfr.* Symb. II. p. 5. 130. III. p. 60.

Strobilus (subg. *Clausiliae*) Anton Verz. p. 46.

Elasmatina Petit in Proc. Zool. Soc. 1843. p. 2.

Genus a praecedente vix distinguendum, et quidem eodem modo ambiguo, quo *Achatina* a *Bulimo* dignoscitur. Peristoma semper simplex et columella magis minusve truncata est. Lamella parietalis semper adest sicut in *Balca*, praeterea saepe plicae columellares et palatales uti in multis Pupae speciebus observantur. — *Tornatellina turrita* columellae truncatione obsoletiore intermedia videtur inter ambo genera.

§. 20.

XVII. Clausilia Draparnaud.

Testa fusiformis, plerumque sinistrorsa; apertura elliptica vel pyriformis, semper lamellis 2 parietis aperturalis coarctata et clausilio in fundo clausa. (Spec. vid. vol. II.)

Clausilia Drap. hist. p. 24. 29.

— *Lam.* hist. VI. 2. p. 111. (ed. Desh. VIII. p. 195.)

— *C. Pfr.* Nat. I. p. 13. 60. III. p. 4. 62.

— *Pfr.* Symb. I. p. 6. II. p. 137. III. p. 62.

— *Reeve* Conch. syst. II. p. 77.

— *Küster* in Chemn. ed. II. vol. I. Sect. 14.

Genus praeter aperturac structuram propriam, de cujus singulis partibus in tractandis speciebus plura dicam, organo peculiari, *clausilio* dicto, jam ab O. F. Müller *) bene descripto, ab omnibus Heliceis bene distinctum, tamen a pluribus auctoribus, etiam recentioribus, Pupae injectum! Scriptores veteres species paucas tunc cognitae Buccino, Turbini et Helici — Bruguière

*) Clarissimus Müller clausilium sic describit: «in imo anguli sinistri prospicitur *ossiculus* supra emarginatus candidissimus, hic, si testa caute frangitur, conspicitur esse lamella oblonga subarcuata, politissima, erecta, elastica, angulo altero inferiori insistentis margine plicae sinistrae; supra hanc lamellam alia linea elevata, ipsi testae adnata, et in latere dextro linea concentrica impressa.... Attendi meretur, quod apertura in quovis anteriorum anfractuum larga, aperta et libera sit, et quod in ultimo adeo arcte quasi munimentis obstruatur, ut vix spatium exeundi limaci relinqui videatur, at huic necessitati cautum est, elasticitate lamellae, quae pressa a corpore exeuntis vel intrantis vermis plicae oppositae arcte adprimitur, ac libera resiliit.» (Hist. verm. II. p. 117.) — Addendum solum est, clausilium non in omnibus esse emarginatum, sed formae variae.

et Olivier Bulimo inseruerunt. Subgenus *Cochlodina* Fér. (exclusis *Cylindrellae* speciebus) Clausiliae omnino respondet. Fleming species nonnullas olim in genere inepto *Odostomiae* enumeravit, et Mermet easdem generi *Stomodontae* inunxit. Praeterea subgenera a solo Hartmann proposita sunt sequentia: *Andraea*, *Delima*, *Dyodonta*, *Laciniaria*, *Papillifera*, *Plicaphora*, *Rupicola*. — De reliquorum auctorum sententiis conferatur Hermannsen ind. I. p. 244 — 243.

MONOGRAPHIA

HELICEORUM VIVENTIIUM.

I. Anostoma Fischer.

1. *A. ringens* (*Helix*) Linn.

T. imperforata, rimata, suborbicularis, utrinque convexa. depressiuscula, glabra, albida, superne linea rubente cincta; anfr. 5 planulati, ultimus subcarinatus; apertura sursum reversa, lunaris, lamellis 2—3 intrantibus. anfractus penultimi et dentibus 4—5 inaequalibus, complanatis, extus scrobicula formantibus coarctata; perist. undique late expansum, reflexiusculum. — Diam. maj. 38, min. 29, alt. 18 mill. (Mus. Cuming.)

Helix ringens Linn. syst. ed. X. p. 769. ed. XII. Nr. 664. p. 4243.

Tomogerus globulosus Pfr. Symb. II. p. 109.

Habitat in Brasilia.

3. *A. Boysii* Benson.

T. arcuato-rimata, compresso-conica, tenuis, laevigata, diaphana, pallide cornea; spira oblique conoidea, obtusiuscula; anfr. 3 convexi, ultimus antice arcuatim ad antepenultimi marginem superiorem ascendens; apertura subtriangulari-rotundata; perist. subsimplex, expansiusculum, marginibus lamina breviter soluta junctis. — Diam. $3\frac{1}{2}$, alt. 3 mill. (Coll. Nr. 2.)

Anostoma Boysii Benson in sched.

— — Chemn. ed. II. Helix t. 101. f. 25—28.

Tomogeres Boysii Pfr. Symb. III. p. 82.

Habitat in Bengalía. (Benevole communicavit Dr. v. d. Busch.)

II. *Tomigerus* Spix.1. *T. clausus* Spix.

T. basi longe rimata, ovato-conica, compressa, solidiuscula, albida, lineis rufis ciugulata; spira conica; anfr. 5, ultimus postice gibbus, irregulariter rugosus, ad aperturam constrictus, scrobiculatus; apertura axi parallela, triangularis, obverse subauriformis, lamellis 7 instructa: 3 in pariete aperturali, 3 subaequalibus in margine basali, 4 maxima, basi furcata in margine dextro; perist.

simplex, expansum. — Diam. maj. $13\frac{1}{2}$, min. $7\frac{1}{2}$, alt. $10\frac{1}{2}$ mill.
(Coll. Nr. 1.)

Scarabius clausus Reeve in Ann. and mag. nat. hist. IX. p. 249. t. 4. f. 1.

Anostoma Spixii Beck ind. p. 34.

Habitat in provincia Bahia Brasiliae. (Pernambuco? Burrow.)

2. *T. turbinatus* Pfr. *Tom. gibberulus Burrow.*
Zool. 1849. pag. 66

T. rimata, compresso-turbinata, tenuis, levissime striatula, pallide cornea, nitidula; spira turbinata, acutiuscula; anfr. 5 convexi, ultimus spiram vix aequans, a latere compressus, basi subangulatus, antice ascendens, basi constrictus, scrobiculatus; apertura verticalis, subauriformis, fere clausa; perist. late expansum, tenue, margine dextro arcuato, intus lamina valida, superne bifida instructo, basali oblique descendente, tridentato; paries aperturalis lamellis 3 inaequalibus armatus. — Diam. maj. 11, min. $7\frac{1}{2}$, alt. 10 mill. (Coll. Nr. 2.)

Tomogeres turbinatus Pfr. in Proc. Zool. Soc. 1845. p. 45.

Anostoma tomigera Beck ind. p. 34.

Tomigerus turbinatus Chemn. ed. II. Helix t. 101. f. 22—24.

Habitat in provincia Bahia Brasiliae.

Obs. Differt a *T. clauso* testa tenui, laevigata, spira conica, anfractum ultimum superante, perist. tenui, non labiato

Tom. Cumingii Newcomb.
Zool. 1849. pag. 64

III. Streptaxis Gray.

Conspectus specierum.

1. Edentulae

a. subregulares §. 1. Nr. 1—2.

β. genuinae §. 2. — 3—12.

2. Dente vel lamella 1 in pariete aperturali,
peristomate edentulo §. 3. — 13—17.

3. Pariete aperturali et peristomate dentatis vel
lamellatis §. 4. — 18—23.

§. 4.

1. **St. subregularis Pfr.**

T. anguste umbilicata, turbinato-semigloiosa, superne confertim et oblique costata, lineis transversis obsolete decussata, hyalino-albida; spira turbinata, acutiuscula; anfr. 7 convexi, ultimus varicosus, vix devians, basi laevigatus; apertura obliqua, lunaris, edentula; perist. album, undique breviter reflexum, margine columellari dilatato. — Diam. maj. 24, min. 19, alt. 46 mill. (Mus. Cuming.)

Streptaxis subregularis Pfr. in Phil. Icon. II. 13. p. 427. Helix t. 8. f. 12.

— — Chemn. ed. II. Helix t. 404. f. 36 — 39.

Habitat . . . ?

Obs. Species *H. Spixianae* affinis, tamen ob structuram subirregularem et analogiam cum *Str. confusa* aliisque huic generi adnumeranda.

2. **St. alveus Dunker.**

T. perforata, turbinata, regulariter oblique costulata, tenuis, diaphana, corneo-albida; spira conica, acutiuscula; anfr. 10 vix convexiusculi, 2 ultimi vix deviantes, ultimus subangulatus, basi planulatus; apertura obliqua, edentula, lunato-ovalis; perist. simplex, margine supero perobliquo, dilatato, vix expanso, basali breviter reflexo. — Diam. maj. 10, min. $8\frac{2}{3}$, alt. 10 mill. (Coll. Nr. 4.)

Streptaxis alveus Dunker in Phil. Icon. II. 9. p. 6. Helix t. 6. f. 14.

— — Chemn. ed. II. Helix t. 404. f. 33 — 35.

Habitat in Brasilia.

§. 2.

3. **St. nobilis Gray.**

T. rimata, ovata, tenuis, nitidula, albida; spira subregularis, conica, obtusiuscula; anfr. $6\frac{1}{2}$ convexi, costulato-striati, ultimus antrosum devius, basi inflata sublaevigatus; apertura subverticalis, semiovalis; perist. expansum, late reflexum. — Diam. maj. 25, min. 20, alt. 25 mill. (Spec. coll. Gray.)

Streptaxis nobilis Gray in Loud. mag. new ser. I. p. 484.

— — Wiegmann's Archiv 1838. II. p. 274.

— — Phil. Icon. I. 3. p. 48.

Habitat in Sierra Leone.

4. **St. Blandingiana (Helix) Lea. †**

T. subglobosa, cornea, longitudinaliter striata, imperforata, oblique depressa; anfr. 6; apertura oblique rotundata; labrum

incrassatum, reflexum; columella laevis. — Diam. 0,7, long. 0,8". (Lea.)

Helix Blandingiana Lea in Transact. Amer. phil. Soc. VII. p. 459.
t. 12. f. 9.

— — Phil. Icon. I. 3. p. 49.

Streptaxis Blandingiana Pfr. Symb. II. p. 109.

Habitat in ripis fluvii St. Paul prope Liberia Africae.

Obs. «In speciminibus adultis umbilicus perfecte clausus est, plicamque exhibet reflexam.»

5. *St. rimata* Pfr.

T. rimata, subglobosa, tenuis, alba sub epidermide cornea; anfr. 6½ convexi, oblique striati, ultimus subtilissime striatus, basi oblique compressus, rimam transversalem loco umbilici formans (sicut in Scarabis); apertura obliqua, semicircularis; perist. vix incrassatum, expansum, margine columellari reflexo. — Diam. 20, alt. 20 mill. (Coll. v. d. Busch.)

Streptaxis rimata Pfr. in Zeitschr. f. Malak. 1847. p. 48.

— — Chemn. ed. II. Helix t. 101. f. 40.

Habitat . . . ?

6. *St. Dunkeri* Pfr.

T. rimata, ovato-globosa, pallide corneo-straminea, superne eleganter costulato-striata, lineis concentricis minutissimis decussata, basi convexa, excavata; spirā elevata, conica; acutiuscula; anfr. 8, convexiusculi, ultimus lateraliter devians, basi laevigatus, nitidus, lineis impressis radiantibus, remotis notatus, antice gibbus, angustatus; apertura perobliqua, subtriangularis, edentula; perist. album, undique reflexum. — Diam. maj. 29, min. 24, alt. 20 mill. (Coll. Nr. 2.)

Streptaxis Dunkeri Pfr. in Phil. Icon. II. 9. p. 7. Helix t. 6. f. 15.

— — Chemn. ed. II. Helix t. 102. f. 1—3.

Habitat in Brasilia, prope Neu-Freiburg.

7. *St. contusa* (Helix) Férussac.

T. rimato-perforata, compresso-globosa, corneo-straminea, superne costulato-striata, minute decussata, basi convexiuscula, laevigata; spirā depresso-turbinata; anfr. 7—8 convexiusculi, ultimus deorsum devians; apertura obliqua, subtriangulato-lunaris; perist. album, undique breviter reflexum. — Diam. maj. 24, min. 17, alt. 14 mill. (Coll. Nr. 3.)

Helix contundata (Helicogena) Fér. prodr. N. 41.

— *contusa* Fér. prodr. p. 67. Hist. t. 34. f. 4. t. 39 B. f. 5. 6.
(c. anim.)

Helix contusa Wood suppl. t. 7. f. 39.

— — *Lam.* ed. Dh. 156. p. 101.

— — *Chemn.* ed. II. *Helix* t. 102. f. 10—12.

Habitat in insulis Guineae.

Strept. uberifrons Pfr. *Itah.* 1848. pag. 89. Brasilia.

9. *St. deplanata* Pfr.

T. rimato-subperforata, orbiculata, depressa, superne confertim costulato-striata, tenuis, diaphana, creta; spira depressa, obtusa, apice subcentrali; anfr. 6½ vix convexiusculi, penultimus subgibbus, ultimus deorsum devians, basi planiusculus, laevigatus, nitidus; rima umbilicaris profunda, areolata; apertura obliqua, semiovalis, edentula; perist. album, breviter expansum, reflexum, margine dextro antorsum subarcuato. — Diam. maj. 44½, min. 40, alt. 6 mill. (Mus. Cuming.)

Streptaxis deplanata Pfr. in *Phil.* Icon. II. 9. p. 8. — II. 13. p. 128.

Helix t. 8. f. 9.

— — *Chemn.* ed. II. *Helix* t. 102. f. 24—26.

Habitat . . . ?

10. *St. albida* Pfr.

T. subperforata, depresso oblonga, laevigata, albida; spira lateralis, obtusissima; anfr. 5 planulati, 2 ultimi antorsum longe deviantes, ultimus depressus; apertura perobliqua, truncato-ovalis, edentula; perist. simplex, marginibus conniventibus, dextro

recto, antrorsum arcuato, columellari reflexiusculo. — Diam. maj. 8, min. 5, alt. 4 mill. (Mus. Cuming.)

Streptaxis albida Pfr. in Phil. Icon. II. 9. p. 7. — Ibid. II. 13. p. 128.
Helix t. 8. f. 5.

Habitat . . . ?

11. *St. Candcana* Petit. †

T. subovalis, albida, nitida, perforata; anfr. 5 — 6 convexiusculi; apertura rotundata, edentula, breve reflexa; umbilicus parvulus. — Long. 2, 2^{'''}, lat. 1, 8^{'''}. (P.)

Helix Candcana Petit in Revue zool. 1842. p. 177.

— — Phil. Icon. I. 3. p. 49.

Streptaxis Candcana Pfr. Symb. II. p. 109.

Habitat in Nova Granada.

12. *St. deformis* (*Helix*) Férussac.

T. subperforata, depresso-ovata, striatula, nitida, virenti-hyalina; spira subelevata, valde excentrica; anfr. 5 — 5½ convexiusculi, ultimus antrorsum longe devians, basi planulatus, laevigatus; perforatio punctiformis; apertura subtriangulato-lunaris; perist. simplex, marginibus remotis, dextro antrorsum subarcuato, columellari incrassato, reflexiusculo. — Diam. maj. 6⅔, min. 4¾, alt. 4 mill. (Coll. Nr. 4.)

Helix deformis (*Helicogena*) Fér. pr. 42. Hist. t. 32 A. f. 1.

— — Wood suppl. t. 7. f. 40.

— — Phil. Icon. I. 3. p. 48.

Streptaxis deformis Gray in Loud. mag. new ser. I. p. 484.

— — Phil. Icon. II. 13. p. 128. Helix t. 8. f. 2.

Artemon deformis Beck ind. p. 48.

Habitat in Brasilia. — (Ile de Goze : Fér.)

§. 3.

13. *St. ovata* Pfr.

T. perforata, ovata, tenuissima, superne confertim striata, pellucida, albido-virens; spira semiglobosa; anfr. 6½ convexi, ultimus inflatus, deorsum devians, juxta perforationem non perviam compressulus; apertura obliqua, truncato-ovalis, lamella dentiformi intrante parietis aperturalis munita; perist. simplex, album, marginibus subparallelis, dextro repando, breviter expanso, columellari reflexiusculo. — Diam. maj. 16, min. 12, alt. 10 mill. (Mus. Cuming.)

Streptaxis ovata Pfr. in Phil. Icon. II. 9. p. 8. — II. 13. p. 128.

Helix t. 8. f. 4.

— — Chemn. ed. II. Helix t. 102. f. 7 — 9.

Habitat . . . ?

14. **St. Souleyetiana (Helix) Petit.**

T. umbilicato-rimata, ovato-depressa, luteo-virens, superne confertim costulato-striata, lineis spiralibus obsolete decussata; spira lateralis, obtusa; anfr. 6 — 7 vix convexiusculi, penultimus subangulatus, ultimus antrorsum devians, basi glaber, nitidus, antice constrictus; umbilicus latiusculus, clausus; apertura truncato-ovalis; perist. album, breviter expansum, marginibus conniventibus, callo tenui, lamellam intrantem mediocrem emittente junctis. — Diam. maj. 43, min. 9, alt. $6\frac{1}{2}$ mill. (Mus. Cuming.)

Helix Souleyetiana Petit in Revue zool. 1844. p. 99.

— — *Phil. Icon.* I. 3. p. 48.

Streptaxis Souleyetiana Pfr. Symb. II. p. 110.

— — *Phil. Icon.* II. 43. p. 130. *Helix* t. 8. f. 6.

— — *Chemn. ed.* II. *Helix* t. 102. f. 24 — 23.

Habitat in insulis Sechellis.

15. **St. Maugerae Gray.**

T. vix perforata, transverse oblonga, laevigata, pellucida, albida; anfr. 5, primi 4 regulares, planiusculi, ultimus obliquissime deviat; apertura truncato-ovalis; perist. simplex, brevissime reflexum, marginibus callo tenui, unidentato junctis. — Diam. maj. 44, min. $7\frac{1}{2}$, alt. 5 mill. (Spec. coll. Gray.)

Streptaxis Maugerae Gray in Loud. mag. new ser. I. p. 484.

— — *Wiegman. Arch.* 1838. II. p. 274.

— — *Phil. Icon.* I. 3. p. 48.

Habitat in Sierra Leone.

16. **St. Petiti Gould.**

T. umbilicata, depresso ovata, tenuis, pellucida, virescenti-albida, superne confertim costulato-striata; spira lateralis, acutiuscula; anfr. 7 convexiusculi, penultimus subangulatus, ultimus antrorsum devians, basi glaber; umbilicus angustus, non pervius; apertura perobliqua, truncato-oblonga, lamella modiocri, simplice, intrante parietis aperturalis coarctata; perist. late expansum, reflexum, marginibus subparallelis, dextro antrorsum arcuato, medio subincrassato, sinistro strictiusculo. — Diam. maj. 40, min. 7, alt. 6 mill. (Mus. Cuming.)

Streptaxis Petiti Gould in Bost. journ. IV. 4. p. 456. t. 24. f. 7.

— — *Phil. Icon.* II. 43. p. 130. *Helix* t. 8. f. 41.

Habitat in imperio birmano prope Tavoy.

17. **St. comboides (Helix) Orbigny.**

T. perforata, depresso-ovata, striatula, glabra, nitida, cerea; spira lateralis, obtusa; anfr. 6 — 7 vix convexiusculi, ultimus antrorsum devians, antice rotundatus; perforatio medioeris, non

pervia; apertura perobliqua, irregulariter semiovalis, lamella intrante parietis aperturalis coarctata; perist. album, late expansum, reflexum, margine supero antrorsum arcuato, obtuse unidentato, basali medio obsolete incrassato. — Diam. maj. $10\frac{1}{2}$, min. 7, alt. 6 mill. (Mus. Cuming.)

Helix comboides Orb. synops. in Guér. mag. Moll. N. 61.

— — Orb. voy. p. 233. t. 23. f. 14—18.

— — Phil. Icon. II. 9. p. 7. Helix t. 6. f. 17.

— — Chemn. ed. II. Helix t. 102. f. 17—20.

Artemon dejectus Beck ind. p. 48.

Habitat in provincia Bahia Brasiliae.

19. *St. Perroteti* (Helix) Petit. †

T. subglobosa, albida, nitida, substriata, umbilicata; spira prominula; anfr. 6 semiconvexusculi; apertura personata; labrum posterius coarctatum, superne emarginatum, anterius subtruncatum, intus tridentatum; columella bilamellata. — Long. 8, lat. 5, alt. 4 mill. (Petit.)

Helix Perroteti Petit in Revue zool. 1841. p. 100.

— — Phil. Icon. I. 3. p. 48.

Streptaxis Perroteti Pfr. Symb. II. p. 110.

Habitat in India orientali.

20. **St. Troberti (Helix) Petit. †**

T. subglobosa, albida, polita, lucida, perforata; spira obtusa; anfr. 6; apertura posterior coarctata; columella lamina alba intus decurrente insculpta; labrum subquadratum, album, reflexum, basi dentibus 2 parvulis geminatis instructum. — Long. 6, lat. 4, alt. $2\frac{1}{4}$ mill. (Petit.)

Helix Troberti Petit in Revue zool. 1844. p. 100.

— — *Phil. Icon.* I. 3. p. 49.

Streptaxis Troberti Pfr. Symb. II. p. 110.

Habitat in Guinea.

21. **St. distorta (Helix) Jonas.**

T. perforata, depresso-ovata, cerca, tenuiuscula, diaphana, superne confertissime arcuato-striata; spira lateralis, obtusa; sutura submarginata; anfr. $5\frac{1}{2}$ vix convexiusculi, ultimus infra penultimum devians, laevigatus, nitidus, antice carinato-compres-sus; apertura oblonga, subauriformis, antice canaliculata, lamella intrante parietis aperturalis coarctata; perist. album, reflexum, marginibus subparallelis, dextro striato, sinistro arcuato, basi dente extus scrobiculum formante munito. — Diam. maj. $40\frac{1}{2}$, min. 6, alt. 5 mill. (Mus. Cuming.)

Helix distorta Jonas in *Phil. Icon.* I. 3. p. 48. *Helix* t. 3. f. 3.

Streptaxis distorta Pfr. Symb. III. p. 52.

Habitat in Guinea (Jonas), in insula Rodriguez (teste Mus. Cum.).

22. **St. pyriformis Pfr.**

T. rimato-perforata, depresso-pyriformis, tenuis, superne confertim striata, diaphana, cerca; spira lateralis, obtusa; anfr. $5\frac{1}{2}$ subplanulati, penultimus dilatatus, subgibbus, ultimus antrorsum valde devians, basi laevigatus, antice compressus, utrinque scrobiculatus; umbilicus rimam profundam exhibens, non pervius; apertura subtetragona, lamella triangulari, intrante, basi bifida coarctata; perist. reflexiusculum, album, marginibus stri-tiusculis, parallelis, sinistro et basali unidentatis, dextro dente 4 marginali et altero profundiore munito. — Diam. maj. 40, min. $6\frac{1}{2}$, alt. 5 mill. (Mus. Cuming.)

Streptaxis pyriformis Pfr. in *Phil. Icon.* II. 9. p. 8. — II. 13. p. 129. *Helix* t. 8. f. 8.

— — *Chemn.* ed. II. *Helix* t. 102. f. 31 — 34.

Habitat in insula Rodriguez.

23. **St. aberrata (Helix) Souleyet.**

T. perforata, ovato-globosa, subtilissime arcuato-striata, nitida, pellucida, albidovirescens; spira lateralis, convexa, obtusiuscula; sutura submarginata; anfr. 6 — 7 vix convexiusculi, ultimus

antrorsum devians, antice et circa perforationem compressus, scrobiculatus; apertura semiovalis, ringens, lamella linguaeformi intrante, curvata parietis aperturalis coarctata; perist. carneum, late reflexum, dentibus 5 marginem non attingentibus munitum, margine dextro antrorsum arcuato. — Diam. maj. 10, min. $6\frac{1}{2}$, alt. $5\frac{1}{2}$ mill. (Mus. Cuming.)

Helix aberrata Soul. Petit in Revue zool. 1844. p. 101.

— — Phil. Icon. I. 3. p. 49.

Streptaxis aberrata Pfr. Symb. II. p. 109.

— — Phil. Icon. II. 13. p. 129. Helix t. 8. f. 7.

— — Chemn. ed. II. Helix t. 102. f. 27—30.

Habitat in Cochinchina.

Obs. Hol. Dussumieri Fér. in Mus. Paris et contusula Fér., huc spectantes, mihi ignotae sunt. — Praeterea Artemon planulatus Beck (e Bras.), A. bifrons, protractus et cylinder Beck (e Guinea) huic generi adnumerandi videntur.

IV. Odontostoma Orbigny.

1. O. colinum (Carocolla) Duclos. †

T. imperforata, subsemiglobosa, carinata, superne leviter conica, scabriuscula, infra carinam acutam inflata, glaberrima, rubra; anfr. $5\frac{1}{2}$ angusti, ultimus magnus; columella basi unidentata; apertura subtriangularis, coarctata: dentibus 2 lamelliformibus ad ventrem anfractus penultimi, 3 parallelis marginem dextrum fere attingentibus; perist. simplex, acutum. — Diam. maj. 25, min. $21\frac{1}{2}$, alt. 13 mill. (Ex icone speciminis unici in collectione Dupontiae.)

Carocolla colina Duclos in Guérin. mag. 1834. t. 30.

Helix colinu (Helicodonta) Féruss. in Bull. zool. 1835. p. 12.

— — Chemn. ed. II. Helix t. 100. f. 10. 11.

Habitat in imperio mexicano teste Férussac.

2. O. globulosum Orbigny. †

T. orbiculato-globulosa, laevigata, nitida, lutea; spira brevis, convexa, apice obtusa; anfr. 5 contigui; apertura semilunaris; labrum acutum; columella incrassata, bilamellata. — Diam. 4, alt. $3\frac{1}{2}$ mill. (O.)

Odontostoma globulosa Orb. moll. cub. I. p. 239. t. 18. f. 8—11.

Habitat in interiore insulae Cubae.

3. O. depressum Orbigny. †

T. orbiculato-depressa, tenuis, diaphana, laevigata, nitida, lutescens; spira convexiuscula, brevis, apice obtusa; anfr. 6 con-

ligui, plani; sutura complanata; apertura semilunaris; labrum tenue, acutum; columella incrassata, impressa, bilamellata. — Diam. 5, alt. 3 mill. (O.)

Odontostoma depressa Orb. cub. I. p. 238. t. 18. f. 4—7. *)

Habitat in interiore insulae Cubae (Sagra, Orb.).

4. *O. allognotum* (Proserpina) Jonas.

T. orbiculato-discoidea, depressa, supra aequae ac infra convexiuscula, glabra, nitida, alba; callus basalis circularis; anfr. 6 planulati, suturis parum distincti, ultimus obtuse carinatus; apertura semilunaris, transversa, dentibus 5 linguiformibus intus coarctata; labrum simplex, acutum. — Diam. 3^{'''}. (Jon.)

Helicina linguifera Jonas in Wieg. Arch. 1839. I. p. 344.

Proserpina allognota Jonas in Zeitschr. f. Mal. 1846. p. 12.

Helix . . . Fér. hist. Fasc. 34. t. 4. f. 13?

Habitat . . . ?

5. *O. nitidum* Goulding.

T. imperforata, depressa, subdiscoidea, nitidissima, succinea vel fulva; spira subplanulata; anfr. 6 celeriter accrescentes, sutura lineari, marginata distincti, ultimus latus, depressus, basi vix convexiusculus, medio callosus; apertura subtriangularis, lamellis 4 coarctata, 4 maxima in ventre anfractus penultimi, secunda, subtorta, valida ad columellam, 2 parallelis in basi anfractus ultimi; perist. simplex, acutum. — Diam. maj. 9, min. 8, alt. 4 mill. (Coll. Nr. 4.)

Habitat in insula Cuba, frequens circa Havana et Matanzas.

Obs. Conf. H. Petitiana Orb. Nr. 689.

✓ 10. *H. coelatura* Férussac.

T. imperforata, depresso-globosa, solidiuscula, striis incrementi distinctis lineisque spiralibus irregulariter distantibus exarata, saturate rufa; spira brevis, late conoidea; anfr. 4—5 convexiusculi, ultimus basi juxta columellam compressus; apertura lunato-ovalis; perist. rectum, subincrassatum, margine dextro sinuoso, columellari calloso. — Diam. maj. 28, min. 24, alt. 49 mill. (Coll. Nr. 5.)

Helix coelatura (Helicogena) Fér. pr. 48. Hist. t. 28. f. 3. 4.

— — Lam. 22, p. 74. ed. Dh. p. 38.

— — Chemn. ed. II. Helix N. 199. t. 29. f. 3. 4.

— — *exarata* Wieg. in Mus. Reg. Berol. olim.

Eurycratera coelatura Beck ind. p. 46.

Habitat in insula Bourbon.

11. *H. simplex* Lamarck. †

T. orbiculato-convexa, imperforata, basi leviter impressa, oblique striata, pallide rufescens (saturatius fasciata); spira subconoidea, apice rubens; labrum simplex, acutiusculum. — Diam. 46 lin. (Lam.) — Diam. 40, alt. 23 mill. (ex ic.)

Helix simplex Lam. 42. p. 77. ed. Dh. p. 43.

— — (Helicogena) Fér. pr. add. 48 bis. Hist. t. 25 B. f. 6.

Eurycratera simplex Beck ind. p. 46.

Habitat in Amboina (Beck.)

Obs. Duce Férussac haec species, quam nunquam vidi, pro varietate majore, depressoire praecedentis forsitan habenda est.

§. 4.

✓ 12. *H. Carocolla* Linn.

† T. obtecte umbilicata, solida, conoideo-depressa, striata, (subepidermide olivaceo-fusca) rufa, nitida; spira conoidea, obtusa; anfr. 5—6 planiusculi, ultimus acute carinatus, basi convexiusculus; apertura subtriangularis, intus alba; perist. incrassatum,

album, marginibus albo junctis, basali dilato, umbilicum obtigente. — Rat. anfr. = 5 : 8. — Diam. maj. 64, min. 53, alt. 26 mill. (Coll. Nr. 6.)

Helix Carocolla Linn. ed. X. p. 769. ed. XII. N. 665. p. 1243.

Caracolla bicolor Lam. 8. p. 97. ed. Dh. p. 146.

Caracolla bicolor Beck ind. p. 32.

β. Minor, subunicolor fusca, vel maculis angularibus picta, vel basi paulo saturatior; anfr. 6; spira plerumque elatior. — Diam. maj. 27, min. 24, alt. 17 mill. (Spec.)

Helix inversicolor β, γ Fér. t. 58 A. f. 1—6.

Caracolla mauritiana Lam. 9. p. 98. ed. Dh. p. 146.

Caracolla mauritiana Beck ind. p. 32.

γ. Var. notabilis:

Helix puercunae Péron. (teste Fér.)

Habitat in insula Isle de France.

15. *H. rostrata* Pfr.

T. obtecte umbilicata, orbiculato-convexa, crassa, striata, nigricans, zona 1 fulvida ad peripheriam, altera ad suturam; spira conoideo-subsemiglobosa; anfr. $5\frac{1}{2}$ plani, ultimus carinatus, supra carinam tumidulus, basi convexiusculus, antice vix deflexus; carina compressa, acuta; apertura fere horizontalis, subtriangularis; perist. crassum, album, ad carinam elevato-rostratum, marginibus callo crasso junctis, basali per dilatato, appresso-reflexo. — Diam. maj. 42, min. 37, alt. 17 mill. (Coll. Nr. 9.)

Helix rostrata Pfr. in Zeitschr. f. Mal. 1847. p. 12.

— — Chemn. ed. II. Helix N. 537. t. 86. f. 3—5.

/ bene — *marginata* var. Fér. hist. t. 63. f. 9. 10.

Habitat in insula Cuba. (Misit Dr. Gundlach.)

Obs. Sequenti quidem affinis, attamen in speciminum copia transitum non praebens.

16. *H. Sagemon* Beck.

T. obtecte umbilicata, orbiculato-convexa, crassa, striata, lutea vel rufescens, fasciis latis nigricantibus varie ornata; spira elevata, obtusa; anfr. $5\frac{1}{2}$ planulati, ultimus carinatus, basi planiusculus, antice gibbus, deflexus; apertura perobliqua, subtriangularis; perist. incrassatum, reflexiusculum, album vel violacescenti-fuseum, marginibus callo lato junctis. — Diam. maj. 34, min. 30, alt. 18 mill. (Coll. Nr. 10.)

Caracolla Sagemon Beck ind. p. 31 (ex synonym.).

Helix marginata var. Fér. hist. t. 63. f. 5. 6. 9. 10.

— — Rang in Guér. mag. 1834. t. 56 (c. anim.).

— *marginatoides* Orb. cub. l. p. 153. t. 5. f. 8—10.

Helix Sagemon Pfr. Symb. II. p. 99.

— — Chemn. ed. II. Helix N. 67. t. 13. f. 3. 4.

Carocolla marginata Reeve Conch. syst. II. t. 167. f. 8.

Lister t. 67. f. 66.

β. Minor, superne fulvo-unifasciata, basi nigricans, medio fulva, umbilico non omnino clauso. — Diam. maj. 32, min. 27, alt. 14 mill. (Spec.)

Helix marginata var. Fér. hist. t. 63. f. 3. 4.

— *marginelloides* Orb. cub. I. p. 154. t. 9. f. 14—16. *)

Habitat frequens in parte meridionali insulae Cubae, prope San Yago, etc.

Obs. Proxime affinis *H. Bornii* Chemn., late umbilicatae. (Conf. Nr. 1018.)

§. 5.

17. *H. crispata* Férussac.

T. imperforata, globosa, tenuiuscula, substriata, nitida, fuscolutescens, lincis brunneis confertis, concentricis, undulato-crispulis elegantissime circumdata; spira brevis; anfr. $4\frac{1}{2}$ convexi, ultimus inflatus; columella arcuata, dilatata, alba; apertura lunato-circularis, intus lactea; perist. simplex, rectum. — Diam. maj. 34, min. 26, alt. 24 mill. (Mus. Cuming.)

Helix crispata (Helicogena) Fér. pr. 26. Hist. t. 25. f. 7. 8.

— — Pfr. Symb. III. p. 65.

— — Chemn. ed. II. Helix N. 194. t. 28. f. 1. 2.

β. Major: diam. maj. 37, min. 31, alt. 28 mill. (Mus. Cuming.)

Habitat in insula Haïti. (Fér.)

Obs. 1. Differt ab *H. dilatata* spira majore, apertura parva, columella arcuata etc.

Obs. 2. *H. crispata* Fér.? Pfr. Symb. II. p. 26 est *H. Butleri*. (Vide Nr. 664.)

18. *H. dilatata* Pfr.

T. imperforata, oblique subovata, solida, granulato-striata, pallide lutea, lincis confertissimis brunneis, interruptis supra et infra fasciam concolorem medii anfractus ultimi picta, apice albida; spira parva, obtusiuscula; anfr. 4 rapide accrescentes, ultimus amplissimus; columella albo-callosa, stricta; apertura maxima, obliquo ovalis, intus lactea; perist. rectum, subincrassatum, margine dextro antrorsum arcuato. — Diam. maj. 35, min. 26, alt. 24 mill. (Mus. Cuming.)

Helix dilatata Pfr. in Proc. Zool. Soc. 1845. p. 42.

— *crispata* var. Fér. hist. t. 16. f. 7. 8?

Habitat . . . ?

*) T. orbiculato-conica, crassa, imperforata, carinata, carina obtusa, substriata, fusco-nigra, fasciis supra fulvis cincta; spira conica, obtusa, subtus minime convexa; apertura obovali, crassa; labro reflexo, albo. — Diam. 33, alt. 18 mill. (Orb. l. c.)

19. **H. tenuis Pfr.**

T. imperforata, subglobosa, tenuis, fusca, rufo-zonata, lineis obsoletis impressis, concentricis notata, epidermide tenuissima, sericina induta; spira obtusiuscula; anfr. 5 celeriter crescentes, vix convexiusculi, ultimus magnus, inflatus, ad columellam obliquam, subtortam excavatus; apertura lunato-ovalis; perist. rectum, simplex, basi subincrassatum. — R. a. = 2 : 5. — Diam. maj. 32, min. 26, alt. 22 mill. (Mus. Cuming.)

Helix tenuis Pfr. in Proc. Zool. Soc. 1845. p. 41.

Habitat ?

20. **H. tumida Pfr.**

T. imperforata, globosa, solida, rugoso-striata, nitidiuscula, alba, epidermide sordide viridi, saturatius radiata induta; spira parvula, elevata, apice nuda; anfr. 5 tumidi, ultimus permagnus; columella subverticalis, elongata, albo-callosa, basi subtorta; apertura ampla, lunato-rotundata, intus coerulescens; perist. simplex, rectum, margine dextro arcuato, basali cum columella angulum formante. — Diam. maj. 27, min. 23, alt. 21 mill. (Mus. Cuming.)

Helix tumida Pfr. in Proc. Zool. Soc. 1845. p. 130.

Habitat ?

21. **H. micans Pfr.**

T. imperforata, globosa, tenuis, fragilis, striatula, lineis confertissimis obsolete decussata, diaphana, albida; spira parvula; anfr. 4 planiusculi, rapide accrescentes, ultimus inflatus; columella tenuis, intrans, excavata; apertura rotundato-lunaris; perist. simplex, rectum, margine dextro antrorsum subarcuato. — Diam. maj. 28, min. 24, alt. 19 mill. (Coll. Nr. 11.)

Helix micans Pfr. in Proc. Zool. Soc. 1845. p. 71.

— — Chemn. ed. II. *Helix* N. 197. t. 28. f. 3—5.

Habitat prope S. Juan prov. Cagayan insulae Luzon. (Cuming.)

22. **H. subplicata Sowerby.**

T. imperforata, subglobosa, longitudinaliter valide plicata, epidermide luteo-fusca vel castanea induta; spira elata, obtusa; anfr. $3\frac{1}{2}$ inflati, rapide accrescentes; apertura ampla, subcircularis, intus nitida, plicata; perist. simplex, marginibus fere contiguus, callo tenui junctis, columellari subincrassato, dilatato. — Diam. maj. 34, min. 26, alt. 26 mill. (Coll. Nr. 12.)

— *carnicolor* Orb. cub. I. p. 158. t. 10. f. 5—8. *)

Polymita globulosa Beck ind. p. 44.

α . Albida, fasciis 2 angustis, approximatis, castaneis supra medium anfractus ultimi, tertia ad suturam. (Var. Leaiana.)

β . Lutea, fasciis 2 latis albis et 1 castanea ad suturam.

γ . Lutea, cingulis 2 angustis albis, linea suturali rosea.

δ . Alba, lineis 2 approximatis nigris ad peripheriam, interstitio fuscescenti-luteo, linea suturali nigra.

ϵ . Fusco-lutea, cingulis 2 approximatis ad peripheriam, superiore superne albo-marginato, linea suturali nigra.

ζ . Alba, cingulis 3 nigricanti-castaneis, primo suturali, secundo latisimo, tertio angusto, interstitio luteo.

η . Lutea, fasciis 2 albis cineta, maculis majoribus dense dispersa.

θ . Fusco-lutea, cingulis 2 latis nigris, fascia suturali lata, rosea.

ι . Fusco-lutea, cingulis 2 angustis albis, linea suturali nigra.

κ . Alba, cingulis luteis, cinnamomeo-marginatis. (Fér.)

λ . Unicolor alba, punctis diaphanis griseis dispersa.

Habitat in insula Cuba.

Obs. Nomen Ferussacianum ob *H. globulosam* fossilem rejiciendum videtur.

28. *H. depicta* Grateloup. †

T. imperforata, subglobosa, conoidea, tenuis, alba, subtilissime striata, fasciis ac lineis variis luteis, fuscisque interruptis

*) T. elevato-conica, laevigata, glabra, imperforata, zonis fulvis 3 cineta; spira elevata, conica, apice obtuso; anfr. 6 subconvexis; apertura rubra. — Diam. 14, alt. 16 mill. (Orb. I. c.)

depieta; anfr. 5 convexi; labrum simplex, acutum. — Diam. 15, alt. 11 mill. (Grat.)

Helix depicta Gratel. in Act. Bord. XI. p. 399. t. 1. f. 12.

Habitat in insula St. Thomas et prope New-Orleans. (Gr.)

29. *H. cubensis* Pfr.

T. imperforata, globulosa, nitidula, longitudinaliter tenerrime striata, basi convexa, unicolor, fasciata vel punctata; spira brevis, obtusa; anfr. 4 convexiusculi, ultimus ventrosus; columella brevis, subverticaliter descendens, superne vix dilatata; apertura magna, lunato-rotundata; perist. simplex, acutum. — Diam. maj. 15, min. 13, alt. 11—12 mill. (Coll. Nr. 18 spec. max.)

— *penicillata* Gould in Bost. Journ. IV. N. 1. 1842. (extus.)

α. Alba, solida, opaca.

β. Alba, fasciis 2 angustis nigricanti-rufis, superiore ad verticem usque conspicua.

γ. Alba, fasciis 2 latis fulvis.

δ. Rosea unicolor.

ε. Cornea, solida absque fasciis.

ζ. Albida, lutescens vel rosea, seriebus confertis punctulorum brunneorum, saepeque zona nigra ornata.

η. Rosea, anfraetu ultimo unicolore, reliquis punctis seriatis, brunneis conspersis.

θ. Spira paulo elatiore.

Microcystis trifasciella Beck p. 2. (teste spec. coll. Anton.)

Habitat in insula Cuba, ubi frequentem legi circa Havana et Matanzas; var. ζ praesertim sub foliis *Oreodoxae* regiae; var. θ in insula Jamaica.

Obs. Cl. Gould (Bost. Journ. IV. p. 487) hanc speciem cum *H. gilva* Fér., quae auctori ignota esse videtur, confundit. (Conf. Nr. 881.)

30. *H. tenerrima* Adams.

T. imperforata, depresso-globosa, tenera, striatula, epidermide tenui, corneo-lutescente induta; anfr. 5½ convexi, ultimus inflatus; columella intrans, callosa, dilatata, complanata, alba; apertura lunato-circularis; perist. simplex, acutum, marginibus

*) T. globosa, imperforata, tenui, translucida, laevigata, alba vel fasciis fuscis cincta; spira brevi; apertura subrotundata; labro simplice, acuto. — Diam. 44, alt. 11 mill. (Orb. l. c.)

conniventibus. — Diam. maj. 18, min. 15, alt. 12 mill. (Coll. Nr. 49.)

Helix tenerrima Adams in Proc. Bost. Soc. 1845. Jan. p. 16.

— — Pfr. in Zeitschr. f. Mal. 1845. p. 155.

— — Chemn. ed. II. Helix N. 201. t. 29. f. 5—8.

Habitat in insula Jamaica.

31. *H. furva* Lowe.

T. imperforata, subglobosa, tenuis, obsolete rugulosa, lutescens, fusco-unifasciata, epidermide umbrina induta; anfr. 6 subplanulati, ultimus subangulatus, basi convexus, antice paulum descendens; sutura distincta; apertura rotundato-lunaris; perist. simplex, acutum, margine columellari subincrassato. — Diam. maj. 17, min. 15, alt. 12½ mill. (Coll. Nr. 20. Spec. Lowean.)

Helix furva Lowe Mader. p. 40. t. 5. f. 2.

— — Lam. ed. Dh. 145. p. 96.

— — Chemn. ed. II. Helix N. 202. t. 29. f. 20—22.

Habitat in insulae Maderae sylvis rarior.

32. *H. Natalensis* Pfr.

T. imperforata, subglobosa, tenuis, laevigata, subdiaphana, corneo-albida, lineis fuscis irregulariter radiata; spira elevatiuscula, obtusa; anfr. 4 vix convexiusculi, ultimus inflatus; columella subverticalis, filiformis, profunde intrans; apertura lunato-rotundata, intus fulva, nitida; perist. simplex, acutum. — Diam. maj. 12, min. 10, alt. 9 mill. (Coll. Nr. 21.)

Helix Natalensis Pfr. Symb. III. p. 65.

— — Chemn. ed. II. Helix N. 203. t. 29. f. 30—32.

Habitat ad Natal Africae meridionalis.

32^a. *H. irradiata* Gould. †

T. conico-globosa, tenuis, imperforata, albida, supra purpureo radiatim tessellata, lineis incrementi acutis confertim striata, subtus rotundata: spirae anfr. 6 convexi, ultimus subangulatus; apertura transversa, lunata; labrum acutum, ad columellam incurvatum, vix reflexum. — Lat. ⅓, alt. ⅔ poll. (G.)

Helix (Nanina) *irradiata* Gould 1846. Exped. shells p. 25.

Habitat in Nova Hollandia.

Obs. «Forma II. cubensi similis. Colores fere dispositi sicut in Bulimo vexillo.»

§. 6.

33. *H. Lindoni* Pfr.

T. imperforata, semiglobosa, tenuis, irregulariter striatula, superne opaca, albida, punctis castaneis conspersa et linea nigri-

Hel. Bartlettiana H. Zool. 1343. p. 1
Cuba

canti-castanea ad suturam ornata; anfr. $4\frac{1}{2}$ convexiusculi, ultimus basi planulatus, pellucidus, corneo-virens, antice breviter deflexus; columella intrans, declivis, subareuata, dilatata, introrsum acuta; apertura lunato-elliptica; perist. simplex, rectum. — Diam. maj. 16, min. 14, alt. $9\frac{1}{2}$ mill. (Mus. Cuming.)

Helix Lindoni Pfr. in Proc. Zool. Soc. 1846.

— — *Phil. Icon.* III. 17. *Helix* t. 10. f. 7.

— — *Chemn. ed. II.* *Helix* N. 193. t. 27. f. 9—11.

Habitat in insula Cuba. (Lindon.)

34. *H. Gossei* Pfr.

T. imperforata, orbiculato-conoidea, tenuis, irregulariter plicatulo-striata, non nitens, diaphana, fulvida, fascia unica peripherica, angusta, castanea, alteraque superiore obsoleta ornata; spira breviter conoidea, obtusa; anfr. 5 planiusculi, ultimus antice vix descendens, basi subplanulatus; columella declivis, angusta, plana, introrsum acuta; apertura obliqua, elliptico-lunaris, intus concolor; perist. simplex, tenue, rectum. — Diam. maj. 16, min. 14, alt. 9 mill. (Mus. Cuming.)

Helix Gossei Pfr. in Proc. Zool. Soc. 1846.

Habitat in Montibus coeruleis insulae Jamaicae. (Gosse.)

35. *H. subconica* Adams. †

T. tenuis, late subconica, imperforata, flavido-fusca, atrofusco varie lineata; anfr. 5 haud multum convexi, exile striati, ultimus subangulatus, subtus convexus; apertura subrectangularis, curviter depressa; labrum tenuissimum; columella recta, acuta. — Div. 100°. Alt. 0,43, lat. max. 0,67, lat. min. 0,57 poll. (Ad.)

Helix subconica Adams in Bost. Proc. 1845. p. 15.

Habitat in insula Jamaica.

36. *H. fulva* (Müller?) Draparnaud.

T. imperforata, turbinato-globosa, cornea, minutissime striatula, nitida; anfr. 6 convexi, angustissimi, ultimus basi convexiusculus; apertura depressa, lunaris; perist. rectum, simplex, acutum. — Diam. maj. 4, min. $3\frac{1}{2}$, alt. 3 mill. (Coll. Nr. 22. Spec. hass.)

β. Minor, obscurior: *H. fulva* var. Alderi Gray l. c.

γ. Depressa, utrinque fere aequaliter convexa:

Helix Mortonii Jeffreys in Linn. transact. XVI. p. 332.

Habitat in Germania, Helvetia, Gallia, Anglia, Italia, Sicilia, Dania, Suecia, Rossia, Caucaso; in America boreali (Sea islands of Georgia: Say, Massachusetts: Gould).

Hel. Fabricii ^{Beck.} *Hel.* 75. 1848. p. 90. Gronl.

37. *H. egena* Say.

T. imperforata, semigloboso-turbinata, glabra, nitidissima, cornea; spira conoideo-elevata; anfr. $5\frac{1}{2}$ convexi, lente accrescentes, ultimus basi convexus, medio impressus, foramen punctiforme simulans; apertura depressa, lunaris; perist. simplex, acutum, margine columellari brevi, verticali, centro bascos inserto, breviter reflexo. — Diam. maj. $3\frac{1}{2}$, min. 3, alt. $2\frac{1}{3}$ mill. (Coll. Nr. 23.)

Helix egena Say. in Philad. journ. V. p. 120.

— — Chemn. ed. II. Helix N. 211. t. 30. f. 19—21.

Habitat in America boreali: Philadelphia (Say, Griffith).

Obs. Differt ab *H. fulva* testae glaberrimae forma depressiore, anfractibus latioribus, ultimo magis inflato, apertura minus depressa.

38. *H. semen lini* Moricand. †

T. parvula, orbiculato-convexa, imperforata, tenuis, glabra, pellucida, nitida, cornea; anfr. 5 planiusculi; apertura transverse ovalis, semilunata, margine acuto. — Diam. 3, alt. 2 mill. (Mor.)

Helix semen lini Moric. mém. 3^e suppl. p. 55. t. 5. f. 17.

Habitat circa Bahia Brasiliac.

39. *H. nana* Hutton. †

T. parvula, convexo-conoidea, pallide fuscescens; anfr. 6—7 arcate convoluti, ultimus rotundatus; apertura latior; labrum sim-

plex; umbilicus evanidus; apex valde obtusus. — Diam. 0,4 poll. (Hutt.)

Helix nana Hutton in Journ. As. Soc. VII. P. 1. p. 218.

Habitat in Himalayah prope Simla.

§. 7.

40. *H. Haldemaniana* Adams.

T. imperforata, depressa, striatula, tenuis, nitida, virenti-hyalina; spira vix elevata, obtusissima; sutura marginata; anfr. 7 vix convexiusculi, ultimus antice non descendens, basi medio profunde excavatus; apertura subverticalis, oblique lunaris; perist. simplex, acutum, margine columellari perobliquo, superne brevissime reflexo. — Diam. maj. 43, min. 44½, alt. 6½ mill. (Coll. Nr. 24.)

Helix Haldemaniana Adams in sched.

— — Pfr. in Zeitschr. f. Mal. 1845. p. 154.

— — Chemn. ed. II. Helix N. 205. t. 28. f. 44—47.

— *arboreoides* Adams in Bost. Proc. 1845. p. 167 *)

Habitat in insula Jamaica.

Ohs. Huic similes varietates subimperforatae *H. vitrinoidis* Desh. (Conf. Nr. 146.)

41. *Helix orbis* Beck.

T. imperforata, discoidea, virenti-lutescens, glaberrima, nitida, pellucida, supra plana, subtus convexiuscula medio impressa; sutura submarginata; anfr. 5—6 plani, ultimus penultimo vix latior, superne angulatus; apertura subverticalis, lata, lunaris; perist. rectum, acutum, simplex. — Diam. maj. 9⅓, min. 8⅔, alt. 3½ mill. (Coll. Nr. 25.)

Helicopsis orbis Beck ind. p. 2. (teste Anton in litt.)

Helix orbis Pfr. Symb. II. p. 35.

— — Chemn. ed. II. Helix N. 206. t. 30. f. 8—10.

— *planulata* Anton Verz. p. 35. N. 1326. Nec Lam.

Habitat in insula Opara (Cuming).

42. *H. ornatella* Beck.

T. imperforata, orbiculato-convexiuscula, leviter striatula, nitidissima, fulvescenti-lutea, unicolor vel fasciis saturate fulvis et

*) T. discoidea, tenui, nitida, diaphana, pallide cornea, exilissime striata; anfr. 7 angustis, a linea subsuturali impressis, ultimo rotundato, subtus late et profunde indentato; apertura subovata, ab anfr. penultimo valde invasa; labro tenuissimo. — Div. 140°. Alt. 0,3, lat. max. 0,59, lat. min. 0,54 poll. (Ad. l. e.)

castaneis multimode ornata et radiata; spira convexiuscula, obtusa; anfr. $3\frac{1}{2}$ — 4 vix convexiusculi, ultimus basi planior; apertura rotundato-lunaris; perist. simplex, acutum, margine columellari subobliquo, dilatato, albo. — Diam. maj. 12, min. 11, alt. $6\frac{1}{2}$ mill. (Coll. Nr. 26.)

Microcystis ornatella Beck ind. p. 2. (teste Anton.)

Helix ornatella Pfr. Symb. II. p. 36.

Habitat in insula Mauriti.

* * *

47. *H. Powisiana* Pfr.

T. imperforata, depressa, superne convexuscula, basi planiuscula, medio impressa, tenuissima, striatula, nitidissima, cornea, fusco-radiata; anfractus plane involuti, ultimus antice oblique depressus; apertura depressa, lunato-oblonga; perist. simplex, reetum, marginibus utrinque centro testae insertis, dextro antrorsum arcuato-dilatato. — Diam. maj. 18, min. 15, alt. 7½ mill. (Mus. Cuming.)

Helix Powisiana Pfr. mss.

— *involuta* Pfr. in Proc. Zool. Soc. 1845. p. 65. Nec Thomae.

Habitat in montibus Quendeu Novae Granadae.

Obs. Num forsán alii generi adscribenda? An *Helicophanta*?

*) T. conoidea, subius convexa, imperforata, cornea, multispira, subpellucida, subtiliter oblique striata; anfr. 6—7, majore unifasciato; apertura semi-lunari, labro aculo, margine columellari albo-unidentato. — Alt. 6, diam. 18 mill. (Grat. l. c.)

§. 8.

48. *H. rectangula* Pfr.

T. imperforata, orbiculato-conica, solida, striatula, grisco-straminea, area basali, linea suturali et fasciis latis castaneis ornata; spira elevata, obtusa; anfr. 6—6½ convexiusculi, ultimus subrectangule carinatus, basi planiusculus, medio subexcaavatus; apertura depressa, subtrapezia, margine columellari incrassato, calloso-subunidentato. — Diam. maj. 13, min. 12, alt. 10 mill. (Coll. Nr. 34.)

Helix rectangula Pfr. in Proc. Zool. Soc. 1845. p. 130.

— — Chemn. ed. II. *Helix* N. 247. t. 28. f. 8. 9.

Habitat in insulis « Marquises ».

Obs. Variat unicolor pallida, linea suturali modo et area basali castaneis

49. *H. conus* Philippi.

T. imperforata, conica, trochiformis, basi acute carinata, laevis, fulva, carina albida, utrinque cingulo angusto, rufo marginata; spira elata, apice acuta; anfr. 8 plani, ultimus basi planiusculus, medio impressus; apertura depressa, oblique quadrangularis; perist. simplex, acutum, margine columellari perobliquo, subincrassato. — Diam. maj. 15, min. 14½, alt. 11 mill. (Coll. Nr. 32.)

Helix conus Phil. coll. Pfr. Symb. I. p. 39.

— — Phil. Icon. I. 4. p. 11. t. 4. f. 6.

— — Chemn. ed. II. *Helix* N. 246. t. 28. f. 6. 7.

Habitat in insula Java.

50. *H. pemphigodes* Pfr.

T. imperforata, subglobosa, tenuis, membranacea, oblique plicatula, diaphana, lutescenti-cornea; spira brevis, papillata; anfr. 4 vix convexi, ultimus magnus, carinatus, juxta suturam inflatus, basi convexus, antice vix descendens; columella simplex, acuta, subverticalis; apertura ampla, fere circularis; perist. simplex, acutum, marginibus conniventibus. — Diam. maj. 18, min. 14, alt. 12 mill. (Mus. Cuming.)

Helix pemphigodes Pfr. in Proc. Zool. Soc. 1846. p. 110.

Habitat in insula Cuba (Lindon).

51. *H. Campbellii* Gray.

T. imperforata, orbiculata, utrinque convexa, superne confertim rugosa, striis spiralibus leviter decussata, pallide brunnea, fascia unica lata, pallida supra peripheriam ornata; spira conoidea, obtusa; anfr. 4½ planiusculi, ultimus medio angulatus, basi sub-

laevigatus; columella brevis, obliqua, subincrassata; apertura angulato-lunaris; perist. tenue, acutum. — Diam. maj. 49, min. 17, alt. 12 mill. (Spec. Mus. Britt.)

Helix Campbellii Gray in Proc. Zool. Soc. 1834. p. 65.

— — Müller synops. p. 7.

β. Testa superne fusca, basi castanea: diam. maj. 20, min. 18, alt. 12 mill. (Mus. Cuming.)

Habitat in insula Phillip oceani pacifici.

52. *H. strigillata* Jan. †

T. imperforata, depressa, carinata, oblique striata; apertura lunaris carinae angulosa; perist. simplex, subcontinuum, gilvum. — Diam. 1 poll., alt. $5\frac{2}{3}$ lin. Apert. diam. long. 5, transv. $6\frac{1}{2}$ lin. (Jan.)

Helix strigillata Jan Mantissa p. 1.

Habitat in America meridionali.

Thais Javanica F. 1849. p. 68

53. *H. Stoddarti* Gray.

T. imperforata, depresso-turbinata, solida, leviter rugosa, nitidula, brunnea, pallide fasciata vel flavescens, fasciis saturatioribus; spira depresso-conica; anfr. 5 planiusculi, ultimus convexior, medio angulatus, basi convexiusculus; columella brevissima, subincrassata, intrans; apertura lunaris; perist. simplex, acutum. — Diam. maj. 45, min. 14, alt. 10 mill. (Spec. Mus. Britt.)

Helix Stoddarti Gray in Proc. Zool. Soc. 1834. p. 65.

— — Müller synops. p. 8.

Habitat in insula Phillip oceani pacifici (Cunningham).

54. *H. Boholensis* Pfr.

T. imperforata, depressa, lenticularis, acute carinata, tenuis, corneo-albida; spira convexiuscula; anfr. 7 planulati, regulariter confertim striati, juxta carinam lincis 2 acute elevatis, approximatis cineti, ultimus basi convexiusculus, striatulus, medio vix impressus, antice non descendens; apertura verticalis, depressissima, angulato-lunaris; perist. simplex, acutum, margine supero brevissimo. — Diam. maj. 14, min. 13, alt. 6 mill. (Mus. Cuming.)

Helix Boholensis Pfr. in Proc. Zool. Soc. 1845. p. 123.

— — Phil. Icon. II. 11 p. 86. t. 7. f. 7.

— — Chemn. ed. II. Helix N. 218. t. 30. f. 5—7.

β. Minor, anfr. $6\frac{1}{2}$: diam. maj. 10, min. 9, alt. 4 mill. (Coll. Nr. 33.)

Habitat in insula Bohol, ubi prope Loboc legit H. Cuming.

55. *H. insculpta* Pfr.

T. imperforata, depressa, utrinque convexiuscula, lenticularis, acute carinata, solidula, castanea, superne costulis confertis

et linea spirali carinae parallela insculpta; anfr. 5 planulati, ultimus basi laevigatus, juxta carinam linea impressa notatus; columella dente unico brevi, acuto, albo munita; apertura depressa, securiformis; perist. simplex, acutum. — Diam. maj. 8, min. $7\frac{1}{2}$, alt. 4 mill. (Coll. Nr. 34.)

Helix insculpta Pfr. in Proc. Zool. Soc. 1845. p. 129.

— — Chemn. ed. II. Helix N. 219. t. 30. f. 15—18.

Habitat . . . ?

55^a. *H. cultrata* Gould. †

T. parva, orbicularis, depressa, glaberrima, lucida, fusco-viridis, infra rotundata, in foveam umbilicalem devexa, imperforata: spirae anfr. 5 convexi, ultimus superne carinatus; apex obtusus; sutura marginata; apertura angusta, lunata; labrum simplex; columella obliqua, callosa, alba, planulata, inflexa, inferne dentem simulans. — Lat. $\frac{9}{10}$, alt. $\frac{1}{10}$ poll. (G.)

Helix cultrata Gould 1846. Exped. shells p. 20.

Habitat in insulis Taheiti et Eimeo.

Obs. «Haud dissimilis *H. internae* Say, labio columellari lato, albo, inflexo distincta.»

56. *H. spirulata* Pfr.

T. imperforata, depressa, lenticularis, subtilissime striata, lineis elevatis concentricis utrinque notata, tenuis, fulva, carinata: carina compressa, subexserta; spira parum elevata; anfr. 5 lente crescentes, supra carinam convexiusculi, ultimus basi vix convexus, medio impressus; apertura depressa, subrhomboidea; perist. simplex, acutum. — Diam. maj. 9, min. $8\frac{1}{2}$, alt. 4 mill. (Coll. Nr. 35.)

Helix spirulata Pfr. in Proc. Zool. Soc. 1845. p. 129.

— — Chemn. ed. II. Helix N. 220. t. 30. f. 11—14.

Habitat in America centrali: Real Llejos (Cuming).

57. *H. fastigiata* Hutton. †

T. parvula, albido-cornea, minutissime granulata, pyramidata, subtus plano-convexa; anfr. 7 convexiusculi, ultimus acute angulatus; sutura leviter impressa; umbilicus evanescens; apertura latior quam longa; apex obtusus. — Axis 0,46 poll. (Hutt.)

Helix fastigiata Hutt. in Journ. As. Soc. VII. P. I. p. 217.

— — Wieg. Arch. 1839. II. p. 222.

Habitat in Himalayah, prope Simla

58. *H. succinulata* Le Guillou. †

T. orbicularis, convexo-depressa, dilute succinea, nitidissima, pellucida; anfr. 5 depressi, ultimus vix carinatus, subtus con-

vexus, medio depressus; spira obtusa; apertura obliqua, semirotunda, acuta, antè superne vix angulata. — Diam. 8, alt. $5\frac{1}{2}$ mill. (Guill.)

Helix succinulata Le Guill. in Revue zool. 1842. p. 138.

β . Minor, tenuior, pallidior.

Habitat in insula Gouaham, var. β in Noukahiwa etc.

59. *H. tongana* Quoy.

T. imperforata, orbiculato-eonica, striatula, fragilis, pellucida, carinata, corneo-albicans; anfr. 6 convexiuseuli, ultimus basi subimpressus; apertura angulato-lunaris; perist. simplex, acutum, margine columellari brevissime reflexo. — Diam. maj. 7, min. $6\frac{2}{3}$, alt. 5 mill. (Coll. Nr. 36.)

Helix tongana Quoy et Gaim. Astrol. II. p. 130. t. 11. f. 19—23.

— — Lam. ed. Dh. 190. p. 119.

— — Chemn. ed. II. Helix N. 643. t. 99. f. 28—30.

Habitat in insula Tonga Tabou (Quoy), in insula Negros Philippinarum (Cuming).

59^a. *H. pertenuis* Gould. †

T. minuta, subglobosa, pellucida, nitidissima, viridi-aurea, imperforata; spira depressa; anfr. $4\frac{1}{2}$ convexi, ultimus amplus, ad peripheriam angulatus, infra suleis remotis radiatus; apertura ampla, lunata; labrum simplex. — Lat. $\frac{1}{8}$, alt. $\frac{1}{10}$ poll. (G.)

Helix pertenuis Gould 1846. Exped. shells p. 20.

Habitat in insula Aurorà.

Obs. «Aliquantulum similis *H. electrinae* et *lucidae*, sed magis globulosa.»

60. *H. gradata* Pfr.

T. imperforata, globoso-turbinata, striatula, tenuis, hyalina; spira turbinata, apice acuta; anfr. 6 convexiuseuli, gradati, ultimus medio acute carinatus, basi convexus, sub lente minutissime concentricè striatus; apertura subtetragono-lunaris; perist. simplex, acutum, margine columellari breviter et verticaliter descendente. — Diam. maj. 5, min. $4\frac{2}{3}$, alt. 5 mill. (Mus. Cuming.)

Helix gradata Pfr. in Proc. Zool. Soc. 1846. p. 110.

Habitat in insula Leyte Philippinarum.

Obs. Differt ab *H. tongana* praecipue spira elevata.

61. *H. miscella* Férussac.

T. imperforata, orbiculato-convexiuseula, tenuis, obsoletissime striatula, nitida, pellucida, pallide cornea; anfr. $5\frac{1}{2}$ planiusculi, ultimus carinatus, basi convexiuseulus, medio impressus;

apertura subverticalis, angulato-lunaris; perist. simplex, tenue, margine columellari oblique arcuato, subincrassato. — Diam. maj. 8, min. 7, alt. 4 mill. (Coll. Nr. 37.)

Helix misella (Helicostyla) Fér. pr. 306.

— — Fér. in Voy. de Freycinet. Zool. p. 473.

— — Quoy et Gaim. Astrol. II. p. 122. t. 10. f. 5—9.

— — Lam. ed. Dh. 195. p. 121.

— — Chemn. ed. II. Helix N. 210. t. 29. f. 14—16.

Habitat in insulis Moluccis, Guam (Quoy), in insulis Sandwich. (Griffith.)

61^a. *H. cicercula* Gould. †

T. depresso-globosa, tenuis, subopaca, imperforata, albido-virescens, striis incrementi conspicuis et striis volventibus sparsis insculpta, infra rotundata, fovea centrali modica; spirac anfr. 5 convexi, ultimus angulatus; apertura lunata; labrum simplex; columella superne vix reflexa. — Lat. $\frac{1}{4}$, alt. $\frac{3}{20}$ poll. (G.)

Helix cicercula Gould 1846. Exped. shells p. 20.

Habitat in montibus insulae Hawaii.

62. *H. subrutila* Mighels. †

T. imperforata, orbicularis, depressa, pellucida, glabra, nitida, lutescens, subcarinata; anfr. 5 convexiusculi; apertura semilunaris, leviter gibbosa; labrum simplex, tenue. — Diam. 0,3—0,4". (M.)

Helix subrutila Mighels in Bost. Proc. 1845. p. 19.

Habitat in insula Oahu.

62^a. *H. cryptoportica* Gould. †

T. parva, orbiculari-depressa, ad apicem acuta, tenuis, pellucida, nitida, luteo-virescens, leviter striata, infra rotundata, imperforata, fovea parva centrali; spirac anfr. 5 $\frac{1}{2}$ convexiusculi, ultimus carinatus; sutura impressa, marginata; apertura lunata; labrum simplex; columella superne valde intorta, sinum angustum, centricam formans. (G.) — Dimens.?

Helix cryptoportica Gould 1846. Exped. shells p. 20.

Habitat . . . ?

Obs. «Persimilis *H. subrutilae* Migh.; differt striarum spiralium defectu et columellae formatione.»

63. *H. sardinicnsis* Porro. †

T. orbiculata, rubiginosa, pellucida, argute striata, carinata, subtus valde convexa; anfr. 5, sutura evidente distincti, maculis

obscurioribus nubeculati; carina albida; labrum simplex, rectum; apertura subtetragona. — Diam. 3—5, alt. 2 mill. (Porro)

Helix sardiniensis Porro in Revue zool. 1838. p. 225.

— — Villa disp. syst. p. 54.

Habitat in Sardinia.

Obs. Descriptio incompleta An huc referenda? An forma adulta?

§. 9.

64. *H. caffa* Férussac.

T. perforata, inflata, subdepresso-globosa, tenuis, fragilis, costulato-striata, viridula, fusco-viridi irregulariter strigata; spira brevis, obtusa; anfr. 4 convexiusculi, ultimus subdepressus; apertura magna, lunato-ovalis, intus margaritacea; perist. tenue, acutum, simplex, marginibus callo tenui junctis, columellari reflexo, perforationem semioccultante. — Diam. maj. 54, min. 40, alt. 30 mill. (Mus. Cuming.)

Helix caffa (Helicophanta) Fér. pr. 3. Hist. t. 9 A. f. 8.

— — Wood suppl. t. 7. f. 36.

— — Lam. ed. Dh. 168. p. 107.

— — Chemn. ed. II. Helix N. 444. t. 74. f. 1—3.

Helicophanta caffa Beck ind. p. 46.

Habitat in Promontorio bonae spei.

65. *H. nicobarica* Chemnitz.

T. perforata, sinistrorsa, solida, globulosa, oblique striata, castaneo-rufa, ad peripheriam, suturam et basin albo-zonata; spira brevis, obtusa; anfr. 5½ convexiusculi, ultimus antice descendens, basi inflatus; apertura rotundato-lunaris, intus concolor; perist. simplex, obtusum, album, margine columellari reflexiusculo, perforationem fere tegente. — Diam. maj. 37, min. 30, alt. 27 mill. (Mus. Gray.)

Helix (pomatia contraria) *nicobarica* Chemn. IX. P. 1. p. 79. t. 108. f. 911. 12.

— *nicobarica* Desh. in Guér. mag. 1839. t. 3.

— — Chemn. ed. II. Helix N. 22. p. 49. t. 6. f. 6. 7.

Habitat in insulis Nicobaricis.

66. *H. scmirugata* Beck.

T. perforata, globosa, tenuiuscula, pallide fulvescens, striis incrementi lincisque impressis concentricis superne usque ad peripheriam anfractus ultimi subdecussata; anfr. 5 convexiusculi, ultimus magnus, inflatus; apertura lunato-subovalis; perist. sim-

plex, obtusum, margine columellari dilatato, perforationem fere tegente. — Diam. maj. 34, min. 25, alt. 24 mill. (Coll. Nr. 38.)

Galaxias semirugata Beck ind. p. 42. (ex synonym.)

Helix globulus Chemn. IX. P. 2. p. 126. t. 130. f. 1159. 60. Nec Müller.

— — *Lam.* 20. p. 74. ed. Dh. p. 38.

— — *Fér. hist.* t. 26. f. 10—12.

— — *Küst. Helix* p. 33.

— *semirugata* Chemn. ed. II. *Helix* p. X. t. 3. f. 11. 12.

Habitat in Bengalia.

Obs. 1. Lineae concentricae in aliis speciminibus ultra peripheriam descendunt, in aliis obsoletissimae sunt.

Obs. 2. *H. globulus* Müll. peristomate incrassato, undique reflexo valde differt. (Cenf. Nr. 833.)

67. *H. tranquebarica* Fabricius.

T. anguste umbilicata, globosa, crassa, distincte striata, lineis obsoletis superne deussata, albida; spira elevata; anfr. $5\frac{1}{2}$ convexiuseuli, ultimus antice descendens; apertura lunato-ovalis, intus lactea; perist. subincrassatum, marginibus convergentibus, columellari calloso, reflexo, umbilicum non tegente. — Diam. maj. 24, min. 17, alt. 15 mill. (Mus. Cuming.)

Helix tranquebarica Fabr. et Mus. Paris.

Galaxias tranquebarica Beck ind. p. 42.

Habitat in Tranquebar.

Obs. Differt ab *H. semirugata* testa crassa, spira elata, umbilico majore, aperto, margine peristomatis columellari crassiore, magis reflexo. An nihilominus ejus varietas?

68. *H. Bombayana* Grateloup. †

T. subglobosa, paululum depressa, subdiaphana, nitida, pallide rosea, longitudinaliter subtilissime striata; anfr. 5 convexi; umbilicus parvulus; apertura semirotundata; labrum acutum, extus album. — Diam. 26, alt. 20 mill. (Grat.)

Helix bombayana Grat. in Act. Bord. XI. p. 406. t. 1. f. 1.

Habitat in India orientali: Bombay.

Obs. An var. *H. Belangeri*? — An potius var. *H. semirugatae*?

68°. *H. calva* Gould. †

T. tenuis, depresso-globosa, nitida, pallide stramineo-virescens, arete umbilicata; spirae anfr. 5 haud turgidi, striis incrementi obsoletis; sutura haud impressa, marginata; apertura semi-

lunaris; labrum simplex, acutum, ad umbilicum paulum reflexum.
— Lat. $\frac{4}{5}$, alt. $\frac{1}{2}$ poll. (G.)

Helix calva Gould 1846. Exped. shells p. 25.

Habitat in insulis Feejee.

Obs. 1. «Similis *H. lurida* Gould (Nr. 83^a), sed minor, colore laetiore, omnino distincta spira glabra, nitida, rotundata, simili apiei *Helicis* Moricandi vel *lychnuchi*. Ad *Naninam* pertinere videtur.»

Obs. 2. Nomen mutandum ob *H. calvam* Lowe.

69. *H. ravida* Benson.

T. perforata, globosa, tenuis, cornea, pellucida, striis longitudinalibus et transversis obsolete decussata; spira breviter conoidea, acutiuscula; anfr. $5\frac{1}{2}$ convexiusculi, ultimus ventrosus; apertura lunato-circularis; perist. simplex, acutum, margine columellari arcuato, dilatato, fornicato-reflexo, perforationem occultante. — Diam. maj. 15, min. 13, alt. 12 mill. (Spec. authent. Mus. Britt. et Coll. Nr. 39.)

Helix ravida Benson in Ann. and mag. nat. hist. IX. 1842. p. 486. *)

— — Chemn. ed. II. *Helix* N. 167. t. 31. f. 1. 2.

Habitat in insula Chusan Chinac.

70. *H. rosea* Jan. †

T. ventricosus-globosa, subperforata, tenuis, subearinata, rosea; apertura lunato-ovata; perist. simplex. — Alt. 4, lat. 6 lin. Apert. diam. long. $3\frac{1}{2}$, transv. 3 lin. (Jan.)

Helix rosea Jan Mantissa p. 2.

Habitat in Italia boreali.

71. *H. dioscoricola* Adams.

T. minima, subperforata, turbinato-globosa, tenuis, subtilissime striata, cornea; spira elevata, obtusa; anfr. 3— $3\frac{1}{2}$ convexi, ultimus medio subimpressus; apertura lunato-rotundata; perist. simplex, acutum, margine columellari subverticaliter descendente, brevissime reflexo. — Diam. maj. $4\frac{3}{4}$, min. $4\frac{2}{3}$, alt. $4\frac{1}{2}$ mill. (Coll. Nr. 40.)

Helix dioscoricola Adams in Bost. Proc. 1845. p. 16. **)

— — Chemn. ed. II. *Helix* N. 244. t. 30. f. 29—32.

Habitat in insula Jamaica.

*) T. subglobosa, umbilicata, epidermido olivacea; anfr. 6 transverse subplicatis, ultimo ventricosus; suturis impressis; umbilico mediocri; apertura suborbiculari, elongatiuscula, labio reflexo, tenui, explanato, labro acuto. — Axis 1.3, diam. 1.33. (Bens. l. c.) Descriptio ad *H. helvaceam* potius referenda videtur. Conf. Nr. 198.

**) T. minima, tenui, subglobosa, imperforata; anfr. 3 perconvexis, ultimo rotundato, subtus anguste indentato; labro tenui. — Div. 70°. Alt. 0,05, lat. max. 0,06, min. 0,03 poll. (Ad. l. c.)

§. 10.

72. *H. Humphreysiana* Lea.

T. aperte perforata, orbiculato-conoidea, subtus convexa, ruguloso-granulata, luteo-fulva, ad peripheriam eastanco-faseiata; spira elata, aetiuscula; anfr. 6—7 convexiusculi, ultimus eirea perforationem compressus; apertura obliqua, lunaris; perist. simplex, acutum, margine columellari vix reflexo. — Diam. maj. 53, min. 47, alt. 33 mill. (Coll. Nr. 44.)

Helix Humphreysiana Lea in Transact. Am. phil. Soc. VII. p. 463. t. 12. f. 16.

— — Chemn. ed. II. *Helix* N. 168. t. 31. f. 3. 4.

— Fér. hist. Livr. 34. t. 2. f. 7.

β. Pallide lutea, absque faseia, basi fulvescens. (Mus. Cuming.)

Habitat in India orientali: Pondichery, Sineapore.

73. *H. gemina* v. d. Busch.

T. angustissime umbilicata, depresso-turbinata, obsolete angulata, striis concentricis et obliquis irregulariter subgranulosa, brunnea, basi pallida, lutescens, medio fascia alba, rufae angustiori adnata, eireumdata; anfr. 6 eeleriter ereseentes, vix convexiusculi; apertura lunato-ovalis; perist. simplex, superne inflexum. — Diam. maj. 49, min. 44, alt. 28 mill. (Coll. Nr. 42.)

Helix gemina v. d. Busch in Phil. Icon. I. 4. p. 9. t. 1. f. 1.

— — (Nanina?) Pfr. Symb. II. p. 18.

Habitat in insula Java (Winter)!

Obs. An varietas praecedentis?

74. *H. Clairvillia* Férussac. †

T. perforata, subturbinata, laevis, lutescens, superne fusea; anfr. 6 convexi, ultimus tumidus; apertura rotundato-lunaris; perist. album, obtusum, margine columellari deelivi, subareuato, reflexiusculo. — Diam. maj. 43, min. 36, alt. 32 mill. (Descript. et mensura ex ie.)

Helix Clairvillia (Helicella) Fér. pr. 243. Hist. t. 91. f. 1.

Nanina Clairvillia Gray in Proc. Zool. Soc. 1834. p. 59.

— — Beck ind. p. 3.

Geve t. 26. f. 277. (teste Beek.)

β. Albida, anfractu ultimo in fundo castaneo late albo-zonato:

Helix Clairvillia a Fer. hist. t. 91. f. 2. 3.

Habitat in insula Amboina. (Beck.)

Obs. Haec species varietatibus nonnullis *H. Humphreysianae* persimilis videtur.

75. H. Foullioyi Le Guillou. †.

T. orbiculato-conoidea, umbilicata, sub epidermide olivacea fulvo-olivacea, subtus depresso-concava, alba; anfr. $5\frac{1}{2}$ ad suturam depressiusculi, tenuiter cancellato-granulati, infimus medio fascia alba inferne late violaceo-nigricante marginata cinctus; umbilicus profundus, ad peripheriam angustatus; apertura obliqua, semioblunga, postice et basi sinuata ac angustata; labrum acutum, ad umbilicum reflexum. — Diam. 46, alt. 29 mill. (Guill.)

Helix Foullioyi Le Guillou in Revue zool. 1843. p. 187.

Habitat ad Triton-Bay Novae Guineae.

76. H. Stuartiae Sowerby.

T. obsolete perforata, depresso-turbinata, striata, alba, fasciis fuscis et nigricantibus varie ornata; spira late conoidea; anfr. 6 vix convexiusculi, ultimus basi subplanulatus; apertura perobliqua, lunaris; perist. simplex, margine supero antrorsum arcuato, columellari breviter reflexo, perforationem fere tegente. — Diam. maj. 40, min. 36, alt. 26 mill. (Mus. Cuning. et Gruner.)

Helix Stuartiae Sow. in Mus. Britt.!

— — Pfr. in Zeitschr. f. Mal. 1845. p. 154.

— — Chemn. ed. II. Helix N. 311. t. 54. f. 9—11.

— Fér. hist. t. 87. f. 5.

Habitat in insula Celebes.

77. H. castanea Müller.

T. perforata, subglobosa, obscura, castanea, fascia rufa albae adnata, anfractibus striatis. — Diam. 47 lin. (Müll.)

Helix castanea Müll. verm. II. p. 67. N. 262.

— — Chemn. IX. P. 2. p. 135. t. 131. f. 1177. 78.

Nanina castanea Beck ind. p. 4.

Habitat in insula Sumatra. (Beck.)

Obs. Cl. Müller speciem accuratius sic describit: «testa pellucida, supra et subtus convexa, dura, crassa, luteo-castanea, absque nitore, striis confertis argutis insignita; nullas lineas concentricas, nec puncta elevata in hac oculus armatus detegit. Anfractus 7, fascia angusta rubra in medio majoris carinam mentitur, supra adiacente alia albida. Centrum ad apicem usque perforatum, patulum, anfractus ullus in eo aegro conspicuus. Area centri maculata, seu saturatius castanea. Apertura lunata absque labio.» Conf. Pfr. in Zeitschr. f. Mal. 1844. p. 180.

78. H. Juliana (Nanina) Gray.

T. aperte perforata, depresso-turbinata, apice obtusa, solida, ponderosa, laevigata, ad suturam striata, alba; anfr. 5 convexiusculi, ultimus antice roseus, ad suturam linea rufa cinctus, ad peripheriam fascia castanea deorsum diluta ornatus, basi planiusculus,

medio impressus, arca umbilicari fusca; apertura oblique lunaris; perist. simplex, obtusum, margine basali subincrassato. — Rat. anfr. = 11 : 16. — Diam. maj. 43, min. 36, alt. 23 mill. (Coll. Nr. 43.)

Nanina Juliana Gray in Proc. Zool. Soc. 1834. p. 58.

Habitat in insula Java (Winter).

83. H. lurida Gould. †

T. globoso-conica, depressa, glaberrima, nitida, livido-castanea, infra pallescens, ad umbilicum minutum declivis; spirae anfr. 6 convexi, radiatim et obtuse striati, ultimus prope aperturam subangulatus; sutura impressa, marginata; apertura lunata, fance livida; labrum acutum, ad umbilicum reflexum, album. — Lat. 4, alt. $\frac{1}{2}$ poll. (G.)

Helix lurida Gould 1846. Exped. shells p. 25.

Habitat in insulis Feejee.

Obs. Num forsán H. Pfeifferi potius affinis? Num eadem species?

84. H. rubicunda Pfr.

T. perforata, depresse turbinata, rugoso-striata, obsolete et minutissime granulata, sub epidermide cornea, decidua rubicunda; anfr. $5\frac{1}{2}$ subplanulati, ultimus medio obsolete angulatus, basi convexior; apertura oblique lunaris, perist. simplex, rectum, margine dextro antrorsum dilatato, columellari dilatato, reflexo, perforationem semioccultante. — Diam. maj. 27, min. 24, alt. 45 mill. (Coll. Walton.)

Helix rubicunda Pfr. in Proc. Zool. Soc. 1845. p. 72.

Habitat . . . ?

84. H. Gardeneri Pfr.

T. subperforata, turbinata, solida, striis longitudinalibus et spiralibus distantioribus decussata, nitida, castanea; spira elevata, acutiuscula; anfr. $6\frac{1}{2}$ convexiusculi, ultimus major, sublaevigatus, ad peripheriam cingulo albo ornatus; apertura oblique lunaris, intus alba; perist. simplex, rectum, margine columellari subincrassato, superne subdilatato, perforationem fere claudente. — Diam. maj. 22, min. 19, alt. 45 mill. (Mus. Cuming.)

Helix Gardeneri Pfr. in Cherm. ed. II. Helix N. 703. t. 142. f. 12. 13.

Habitat in sylvis insulae Ceylon, 8000' supra marc. (Dr. Gardener.)

85. H. Salomonis Le Guillou. †

T. orbiculata, depresso-subconica, umbilicata, cancellata; anfr. 6 depresso-convexi, ultimus rotundatus, subtus depressus, planus; apertura obliqua; labrum acutum; labium obliquissimum superne reflexum, umbilicum minimum suboccultans. — Diam. 48, alt. 43 mill. (Guill.)

Helix Salomonis Le Guillou in Revue zool. 1842. p. 137.

Habitat in insulis Salomonis.

86. H. spectabilis Pfr.

T. subperforata, turbinato-depressa, solida, nitidissima, corneo-lutea, fascia 4 rufa vel nigricante percurrente ornata; spira

magis minusve elevata, apice saepe rubicunda; anfr. $5\frac{1}{2}$ convexiusculi, ultimus infra fasciam angulatus; apertura late lunaris; perist. simplex, acutum, margine columellari subreflexo, perforationem tegente. — Diam. maj. 17, min. 15; alt. 40 mill. (Coll. Nr. 47.)

Helix spectabilis Pfr. in Proc. Zool. Soc. 1843. p. 44.

— — *Phil. Icon.* I. 7. p. 155. t. 4. f. 13.

— — *Chemn. ed. II. Helix* N. 165. t. 32. f. 3. 4.

β. Unicolor virescenti-flavida:

Helix spectabilis var. *Chemn. ed. II. Helix* t. 32. f. 5. 6.

Habitat in insula Samar, var. in insula Leyte Philippinarum (Cuming).

87. *H. glauca* (Nanina) Benson.

T. subperforata, orbiculato-conoidea, glaberrima, nitida, glaucescenti-hyalina; spira elevata, acutiuscula; anfr. $6\frac{1}{2}$ convexiusculi, ultimus multo latior, rotundatus; apertura subverticalis, lunaris; perist. simplex, rectum, margine columellari vix dilatato, perforationem fere claudente. — Diam. maj. $12\frac{1}{2}$, min. 11, alt. $7\frac{3}{4}$ mill. (Coll. Nr. 48.)

Nanina glauca Benson. (teste v. d. Busch.)

Helix glauca Bens. Pfr. Symb. III. p. 65.

— — *Phil. Icon.* III. 17. *Helix* t. 10. f. 8.

— — *Chemn. ed. II. Helix* N. 539. t. 87. f. 1—3.

Habitat in Bengalía: Almorah (v. d. Busch).

L. gemma Pfr. Zs. 1848. p. 90 — *Ins. Japon.*

88. *H. vesicula* (Nanina) Benson. †

T. tenuis, depressiuscula, pallide cornea, translucens, polita, supra conoidea, apice acuminata, infra tumidiuscula; anfr. 6; aperturæ longitudo latitudinem aequans; labrum subrectum ad axin spectans. — Diam. 0,6 poll. (B.)

Nanina vesicula Bens. in Journ. As. Soc. VII. p. 216.

Habitat in montibus Himalayae.

89. *H. fragilis* (Nanina) Hutton. †

T. tenuis, fragilis, vitrea, olivacea, conico-discoidea; spira subexserta, apice obtusa; anfr. 5 supra convexi, subtus subplanulati; apertura obliqua, rotundato-ovata; perist. acutum — Diam. 0,35 poll. (H.)

Nanina fragilis Hutton in Journ. As. Soc. VII. p. 216.

Habitat in Himalaya, prope Kirmalliah.

90. *H. ligera* Say.

T. perforata, orbiculato-convexa, nitida, pallide lutea, superne arcuatim costulato-striata, basi laevigata; anfr. $7\frac{1}{2}$ vix convexius-

culi, ultimus basi planior; apertura lunaris; perist. simplex, acutum, reetum, margine columellari vix reflexiusculo, intus subincrassato. — Diam. maj. 15, min. 13½, alt. 10—11 mill. (Coll. Nr. 49.)

Helix ligera Say in Philad. journ. II. p. 157.

— — *Binney* in Bost. journ. III. p. 442. t. 20. f. 1.

— — *Chemn.* ed. II. *Helix* N. 176. t. 33. f. 5—7.

— *Wardiana* Lea obs. II. p. 67. t. 23. f. 82.

— *Rafinesquea* Fér. pr. 311 ? Hist. t. 54 A. f. 5.

Lister t. 81. f. 82. (Say.)

Habitat in America boreali: Missouri, Kentucky, Cincinnati.

Obs. *H. Wardiana* colore animalis solum diversa dicitur.

91. *H. intertexta* Binney.

T. perforata, orbiculato-convexa, luteo-fulva, oblique argute striata, lincis confertis eoneentricis granulato-decussata; spira elevata, obtusa; anfr. 6½ convexiusculi, ultimus obsolete angulatus, fasciis obsoletis saturatioribus cinctus; apertura lunaris; perist. simplex, reetum, acutum, margine columellari superne reflexiusculo, intus calloso-incrassato. — Diam. maj. 15, min. 13½, alt. 10 mill. (Coll. Nr. 50.)

Helix intertexta Binn. in Bost. journ. III. p. 443. t. 20. f. 2.

— — *Phil.* Icon. II. 9. p. 5. t. 6. f. 16.

— — *Chemn.* ed. II. *Helix* N. 177. t. 33. f. 8—10.

Habitat in Pennsylvania (Griffith), Ohio, Carolina septentr. (Binney.)

Obs. Differt ab *H. ligera* sculptura decussata, utrinque aequali.

92. *H. portoricensis* Pfr.

T. perforata, subturbinato-depressa, tenuis, diaphana, cornea, confertim striata; spira elevata, acutiuscula; anfr. 5 convexiusculi, sutura profunda disjuncti, ultimus striis nonnullis spiralibus notatus; apertura subverticalis, lunaris; perist. simplex, acutum, margine columellari ad umbilicum angustissimum dilatato-reflexo. — Diam. maj. 10, min. 9, alt. 7 mill. (Coll. Gruner.)

Helix Portoricensis Pfr. in Zeitschr. f. Mal. 1847. p. 13.

Habitat in insula Portorico.

93. *H. turbiniformis* Pfr.

T. perforata, trochiformis, oblique striatula, corneo-albida; spira elevata, apice acuta; anfr. 5 convexi, parum exserti; apertura lunaris; perist. simplex, acutum. — Diam. maj. 7, min. 6½, alt. 4½ mill. (Coll. Nr. 54.)

Helix turbiniformis Pfr. in Wieg. Arch. 1839. I. p. 350.

— — *Chemn.* ed. II. *Helix* N. 644. t. 99. f. 31—33.

Helix pyramidatoides Orb. cub. I. p. 156. t. 8. f. 5—8.

— *subpyramidalis* Adams in Bost. Proc. 1845. p. 15.

β ? Perdepressa, apice obtuso, umbilico latiore. — Div. 155°. Alt. 0,1, lat. max. 0,25, lat. min. 0,22 poll. (Ad.)

Helix depressa Adams in Bost. Proc. 1845. p. 16.

Habitat in insulac Cubae provincia Canimarensi rara! Etiam in Jamaica, sicut var. β . (Adams.)

94. *H. doliohum* Pfr.

T. perforata, turbinata, confertissime et minute costulato-striata, pellucida, non nitens, cornea; spira turbinata, apice obtusiuseula; anfr. 5 convexiuseuli, ultimus basi subplanatus; apertura depressa, late lunaris; perist. simplicissimum, rectum. — Diam. maj. $3\frac{1}{2}$, min. $3\frac{1}{4}$, alt. $2\frac{1}{2}$ mill. (Mus. Cuming.)

Helix doliohum Pfr. in Proc. Zool. Soc. 1846. p. 41.

Habitat prope Sibonga insulae Zebu (Cuming).

95. *H. Gundlachi* Pfr.

T. subperforata, turbinato-depressa, nitida, fulva; anfr. 5 convexiuseuli, lente accrescentes, ultimus basi subplanulatus, sub lente lineis concentricis sculptus, circa perforationem excavatus; apertura depressa, lunaris; perist. simplex, rectum, acutum. — Diam. maj. $2\frac{1}{2}$, min. $2\frac{1}{4}$, alt. $1\frac{2}{3}$ mill. (Coll. Nr. 52.)

Helix Gundlachi Pfr. in Wieg. Arch. 1840. I. p. 250.

— — Chemn. ed. II. Helix N. 213. t. 30. f. 25—28.

— *pusilla* Pfr. in Wieg. Arch. 1839. I. p. 351. Nec Lowe.

Habitat in insulae Cubae provincia Canimarensi!

Obs. Similis speciminibus junioribus *H. fulvae*.

96. *H. aculeata* Müller.

T. perforata, pusilla, globoso-turbinata, corneo-lutescens, lamellicostis: costis in ciliis elongatis; anfr. 4 convexi; apertura rotundata; perist. membranaceum, subexpansum, marginibus approximatis. — Diam. $2\frac{1}{2}$, alt. $2\frac{3}{4}$ mill. (Coll. Nr. 53.)

Helix aculeata Müll. verm. II. p. 81. N. 279.

— — Drap. p. 82. t. 7. f. 10. 11.

— — C. Pfr. III. p. 24. t. 4. f. 24. 25.

— — Rossm. VIII. p. 37.

— *seminulum* Rossm. VIII. f. 533.

Habitat in Anglia et Hibernia (Thompson). Prope Kiloniam Holstiae detexit A. Müller.

§. 44.

98. *H. Ibuensis* Pfr.

T. subperforata, trochiformis, tenuis, oblique costulato-striata, pellucida, pallide cornea; spira conica, acuta; anfr. 7 vix convexiusculi, ultimus acute carinatus, basi vix convexior, sublaevigatus; apertura depressa, late angulato-lunaris; perist. simplex, acutum, margine columellari subreflexo, perforationem fere claudente. — Diam. maj. 43, min. 42, alt. 40 mill. (Mus. Cuming. spec. max.)

Helix Ibuensis Pfr. Symb. III. p. 66.

Habitat ad Ibu Africae (Frazer).

99. *H. concentrica* Le Guillou. †

T. trochiformis, subfulva, pellucida, subumbilicata; anfr. 5 transversim obsolete striati (striis 3 remotis), ultimus carinatus, subtus depresso-convexus; spira conico-depressa; apertura sub-

ovata, antèrius subangulata, margine acuta; umbilicus minutissimus, obsoletus. — Diam. 7, alt. 6 mill. (Guill.)

Helix concentrica Le Guillou in Revue zool. 1842. p. 139.

Habitat in insulá Tongana: Vavao.

100. *H. pacifica* Pfr.

T. perforata, subtrochiformis, tenuis, pellucida, striatula, cornea; spira conoidea, acutiuscula; anfr. 6 — 6½ convexiusculi, ultimus acute carinatus, basi paulo convexior, laevigatus, nitidus; apertura depressa, angulato-lunaris; perist. simplex, acutum, margine columellari vix dilatato, in perforationem punctiformem inserto. — Diam. maj. 5½, min. 5, alt. 4 mill. (Coll. Nr. 55.)

Helix pacifica Pfr. Symb. III. p. 66.

— — Chemn. ed. II. Helix N. 549. t. 88. f. 3 — 5.

Habitat in insula: Cocos island oceani pacifici.

Obs. Similis sequenti, basi multo minus convexa et apertura lunari diversa.

101. *H. livida* (Stenopus) Guilding.

T. perforata, conica, tenuis, striatula, fusco-cornea, diaphana; spira conica, obtusiuscula; anfr. 6 convexiusculi, ultimus basi ventrosus, supra medium carinatus; apertura rotundato-lunaris; perist. simplex, acutum, rectum. — Diam. maj. 4½, min. 4, alt. 3½ mill. (Coll. Metcalf.)

Stenopus lividus Guild. in Zool. Journ. III. p. 528. t. suppl. 27. f. 4 — 3.

— — Sow. Conch. Man. f. 516.

Habitat in insula St. Vincentii.

§. 42.

102. *H. stolephora* Valenciennes.

T. subobtectè perforata, subdiscoidea, sublaevigata, oblique striata, obtuse angulata, superne depressa, pallidissime carneofulvenscens, basi convexa, infra angulum fascia rufa, deorsum pallescente, reticulato-striata circumdata; anfr. 4 planiusculi; apertura perobliqua, valde depressa; perist. vix incrassatum, in marginibus callo perforationem fere tegente junctis. — R. a. = 4 : 9. — Diam. maj. 52, min. 40, alt. 20 mill. (Coll. Nr. 56.)

Helix stolephora Valenc. in Humb. voy. Zool. II. p. 242. t. 56. f. 4.

— — Pfr. in Zeitschr. f. Mal. 1844. p. 179.

— — Chemn. ed. II. Helix N. 162. t. 32. f. 1. 2.

— *buphthalmus* (Helicella) Fér. pr. 238. Bull. zool. 1835. p. 33.

— *Lamarckiana* β Pfr. Symb. II. p. 49.

Nanina bicolor Pfr. Symb. I. p. 36.

Eurycratera stolephora Beck ind. p. 46.

Habitat in Nova Hispania (Valenc.), potius in Archipelago asiatico. (Fér.)

Obs. Affinis *H. Lamareckianae* Lea; differt spira depressiore, laevigata, peristomate subincrassato, etc.

103. *H. citrina* Linn.

T. perforata, orbiculato-convexa, striata, nitida, diaphana, pallide lutea, fasciis opacis albis 4 vel pluribus ornata; spira obtusa; anfr. 5 vix convexi, ad suturam linea impressa notati, ultimus basi convexus; apertura magna, lunaris; perist. simplicissimum, acutum, rectum, margine columellari vix reflexiusculo. — R. a. = 4 : 7. — Diam. maj. 44, min. 36, alt. 24 mill. (Coll. Nr. 57.)

Helix citrina Linn. syst. ed. X. p. 771. ed. XII. N. 679. p. 1245.

— — *Born* Mus. p. 377. t. 13. f. 14. 15. t. 15. f. 1—10.

— — *et luctuosa* Beck ind. p. 3.

Vitrina citrina Quoy et Gaim. Astrol. II. p. 140. t. 11. f. 1—4.
(c. anim.)

Zonites citrina Swains. Malae. p. 334.

Seba Mus. III. t. 39. f. 1—10.

β. Anfractu ultimo superne mediq obsolete impresso-suleato.

Habitat in insulis Molucais, Amboina, Waigiou, etc.

Obs. Variat colore albido, fusciscente, lateritio et violacescente (*Nanina luctuosa* Beck), cingulis cinnamomeis et nigricantibus. — Animal *Naninae* ex icone Quoyi, nec *Vitrinae*.

104. *H. spiralis* Lc Guillou. †

T. orbiculata, subconoidea, umbilicata, lutea, striis radiantibus crebris, interdum obsoletis sculpta; spira obtusa; anfr. 5 depresso-convexiusculi, superne infimus medio fascia purpureo-nigra decurrente ornatus; umbilicus angustissimus, profundus; apertura semiovata; labrum acutum, ad umbilicum vix reflexum. — Diam. 34, alt. 20. mill. (Guill.)

Helix spiralis Le Guillou in Revue zool. 1845. p. 188.

β. Infimi anfractus fascia purpureo-nigra, albo bilateraliter marginata.

Habitat in insulis Arrow.

Obs. Differt ab *H. citrina* forma depressa, spira minus elevata, et regione umbilicali non colorata. (Guill.)

105. **H. cinnamomea Valenciennes.**

T. subperforata, depressa, tenuis, nitida, diaphana, minutissime et irregulariter striata, cinnamomea; sutura medioeris; anfr. 7 angusti, vix convexiusculi; umbilicus parvus, semitectus; apertura subobliqua, semilunaris; perist. simplex, tenue, acutum. — Diam. 40 lin. (Eyd.) — Diam. maj. 22, min. 20, alt. 14 mill. ex ic. (Coll. Nr. 58?)

Helix cinnamomea Val. in Mus. Paris.

— — — *Eydoux* in Guérin mag. 1838. t. 116. f. 1.

Habitat in Archipelago Natunas maris chinensis.

106. **H. Pfeifferi Philippi.**

T. subperforata, orbiculato-convexa, solida, laevis, nitida, ad suturam submarginatam tenuissime plicatula, rufo-castanea, apice fulvida; spira subelevata; anfr. 6—6½ planiusculi, ultimus rotundatus, subdepressus; apertura lunaris, intus concolor; perist. simplex, margine dextro sinuato, acuto, basali subincrassato, calloso, columellari breviter reflexo. — R. a. = 11 : 16. — Diam. maj. 28, min. 23, alt. 16 mill. (Coll. Nr. 59.)

Helix Pfeifferi (Nanina?) Phil. in Arch. f. Nat. 1845. I. p. 62.

— — — *Chemn.* ed. II. *Helix* N. 172. t. 31. f. 9. 10.

Lister t. 60. f. 57?

Habitat in China.

Obs. Differre videtur ab *H. cinnamomea* (specie mihi dubia) testa solida, majore et anfractuum latiorum numero. An nihilominus eadem?

107. **H. cineta Lea. †**

T. superne depressa, inferne inflata, longitudinaliter striata, umbilicata, rufo-fusea, fascia fusea aut nigra super medios anfractus ornata; anfr. 4; spira planulata; apertura subrotundata; labrum simplex; columella laevis. — Diam. 0,9, long. 0,6 poll. (Lea.) Diam. 23, alt. 15 mill. (ex ic.)

Helix cineta Lea obs. I. p. 168. t. 19. f. 68.

Habitat in insula Java? (Lea.)

Obs. Margo columellaris peristomatis in icone incrassatus et dilatatus apparet.

108. **H. semifusca Deshayes. †**

T. orbiculata, depressa, tenuis, fragilis, cornea, laevigata, ad peripheriam subangulata, subtus perforata; apertura ovato-semilunaris, marginibus tenuissimis, acutis; anfr. angusti, convexius-

culi. — Diam. 18—20 mill. (Dh.) Diam. maj. 18, min. 15, alt. 9 mill. (ex ic.)

Helix semifusca Desh. in Bélanger voy. Zool. p. 414. t. 1. f. 8—10.
Habitat prope Pondichery (Bélanger).

Obs. An = *H. pallida* Gray? Fér. in Bull. zool. 1835. p. 32.

109. H. Baudini Deshayes. †

T. orbiculato-convexa, substriata, pallide fulva; anfr. 7 vix convexiuseuli, ultimus basi albo-subearinatus; sutura levis; umbilicus minimus; apertura fere perpendicularis, minima, oblique semilunata; perist. simplex, basi subincrassatum. — Diam. 22 mill. (Dh.)

Helix Baudini Desh. in Encycl. méth. II. p. 236. N. 127.

Nanina Baudini Beck ind. p. 4.

Habitat in Nova Guinea.

110. H. striata (Nanina) Gray. †

T. solidiuscula, subpellucida, albida, periostraca tenui, olivacea; spira convexiuseula, confertim transverse striata; anfractus ultimus antice sublaevis. — Axis 9, diam. 15 lin. (Gr.)

Nanina striata Gray in Proc. Zool. Soc. 1834. p. 59.

— — *Müll.* synops. p. 5.

Habitat . . . ?

111. H. fusco-lutea Grateloup. †

T. orbiculato-conoidea, vix perforata, tenuis, nitida, pellucida, subtilissime striata, supra corneo-fusca, infra flavescens; spira obtusa; anfr. 5—6, ultimus fasciis 2 pallide luteolis cinctus; labrum simplex, acutum. — Alt. 10, diam. 16 mill. (Gr.)

Helix fusco-lutea Gratl. in Act. Bord. XI. p. 410. t. 1. f. 9.

Habitat in insula Madagasear (Duisabo, Grateloup).

112. H. Menkeana Pfr.

T. perforata, depressa, subtus convexior, tenuiuseula, laevis, alba, fasciis 4—5 fuscis, suprema latissima, ornata, epidermide pallide cornea, diaphana induta; spira depressa; sutura medio-cris; anfr. 4 vix convexiuseuli, celeriter accrescentes; apertura subverticalis, lunato-ovalis; perist. simplex, acutum, margine columellari superne per dilatato, reflexo. — Diam. maj. 18, min. 15, alt. 12 mill. (Coll. Nr. 60.)

Helix Menkeana Pfr. Symb. II. p. 33.

— — *Chemn.* ed. II. *Helix* N. 691. t. 111. f. 1—5.

— *capensis* Menke in litt. olim.

Habitat in promontorio bonae spei, Zwellendam (Krauss).

Obs. Conf. *H. bistrialis* Nr. 160.

113. **H. lineolata Chemnitz.**

T. perforata, depresso-globosa, alba, fasciis lutescentibus et lineolis numerosis, interruptis, fuscis cincta; anfr. 4—5 convexiusculi; apertura lunaris; perist. simplex, acutum. — Diam. 24, alt. 18 mill. (ex ic.)

Helix lineolata Chemn. IX. P. 2. p. 121. t. 129. f. 1148 c.

Habitat in India occidentali. (Ch.)

Obs Species hucusque præter iconem prorsus ignota.

114. **H. petrosa Hutton. †**

T. perforata, tenuis, fragilis, pellucida, pallide fusca, vitrea, polita; spira depressa; anfr. 6—7; apertura lunata, marginibus acutis, disjunctis. — Diam. 4 poll. (H.)

Helix petrosa Hutt. in Journ. As. Soc. III. p. 83.

Habitat in provincia gangetica: Mirzapoor.

115. **H. resplendens Philippi.**

T. subperforata, depressa, glaberrima, lucida, tenuis, pellucida, lutescenti-cornea; spira vix prominula; anfr. $6\frac{1}{2}$ convexiusculi, lente accrescentes, ultimus regulariter auctus, basi convexiusculus, medio profunde impressus; apertura fere verticalis, depressa, lata, lunaris; perist. simplex, acutum, margine columellari peroblique descendente, in centro baseos brevissime reflexo. — Diam. maj. 49, min. $46\frac{1}{2}$, alt. 9 mill. (Coll. Nr. 61.)

Helix resplendens Phil. in Zeitschr. f. Malak. 1846. p. 192.

— — *Chemn.* ed. II. *Helix* N. 688. t. 110. f. 7—9.

Habitat prope Mergui imperii birmani (Th. Philippi).

Obs. An forte = *Hel. petrosa* Hutt., ex descriptione brevi vix cognoscenda? — Ab *H. vitrinoides* Dh. satis differt anfractibus convexiusculis, ultimo vix latiore.

116. **H. vitrinoides Deshayes.**

T. subperforata, depressa, tenuis, laevigata, fragilis, pallide cornea; spira vix elevata; sutura marginata; anfr. 6 vix convexiusculi, ultimus latus, basi convexior; apertura late lunaris; perist. simplex, rectum, acutum, margine columellari vix reflexiusculo. — Diam. maj. 23, min. 21, alt. 12 mill. (Coll. Nr. 62.)

Helix vitrinoides Desh. in Guér. mag. 1831. t. 26.

— — *Desh.* in Encycl. méth. II. 51.

— — *Chemn.* ed. II. *Helix* N. 689. t. 110. f. 10—15.

Nanina vitrinoides Gray in Proc. Zool. Soc. 1834. p. 58.

Helicella vitrinoides Beck ind. p. 6.

Habitat in Bengalia, Bombay! Nec non in insulis Philippinis.

Obs. Perforatio in adultis aperta, in junioribus saepe obsoleta.

117. *H. ceratodes* Pfr.

T. subperforata, globoso-depressa, tenuis, minute striatula, nitidula, pellucida, cornea; spira parum elevata; anfr. 5 subplanulati, celeriter accrescentes, ultimus subdepressus; apertura ampla, oblique lunaris; perist. simplex, acutum, margine columellari breviter reflexiuseulo, perforationem fere occultante. — Diam. maj. $16\frac{1}{2}$, min. 14, alt. 9 mill. (Coll. Nr. 63.)

Helix ceratodes Pfr. in Proc. Zool. Soc. 1845. p. 128.

— — Chemn. ed. II. *Helix* N. 690. t. 110. f. 16. 17.

Habitat in insulis Luzon et Mindoro Philippinarum (Cuming).

118. *H. calamechroa* Jonas.

T. perforata, globoso-depressa, tenuis, nitida, pellucida, straminea, transversim regulariter striata, lineis spiralibus, tenuissimis, oculo nudo vix conspicuis decussata; anfr. $5\frac{1}{2}$ sensim accrescentes; apertura lunaris; perist. simplex, acutum. — Diam. maj. 17, min. $15\frac{1}{2}$, alt. 8 mill. (Coll. Nr. 64.)

Helix calamechroa Jonas in Phil. Icon. I. 3. p. 47. t. 3. f. 2.

— *tenera* Jonas olim in litt.

Habitat in Guinea.

Hel. subfusca Beck. Zool. 1848. p. 91. — *Fat. Jensen.*

119. *H. honesta* Gould.

T. subperforata, orbiculata, laevigata, nitida, pellucida, corneo-albida; spira depresso conoidea, subpapillata; anfr. 5 vix convexiuseuli, sensim accrescentes, ultimus ad peripheriam obsolete angulatus, basi convexus; apertura late lunaris; perist. simplex, rectum, margine basali leviter arcuato, columellari superne brevissime reflexo. — Diam. maj. 13, min. $11\frac{1}{2}$, alt. 7 $\frac{1}{2}$ mill. (Mus. Cuming.)

Helix honesta Gould in sched. Cum.

Habitat in imperio birmano.

120. *H. glaphyra* Say?

T. perforata, depressa, superne planiuscula, tenuis, saturate olivaceo-fusca, obscurius strigata; sutura linearis; anfr. 5 planiusculi, sensim accrescentes; umbilicus angustissimus; apertura lata, lunaris; perist. simplex, acutum. — Diam. maj. 14, min. 12, alt. 7 mill. (Coll. Nr. 65?)

Helix glaphyra Say in Nichols. Am. Enc. t. 1. f. 3?

— — (*Helicella*) Fér. pr. 210?

— — Pfr. Symb. II. p. 29.

Habitat in Pennsylvania.

Obs. Specimina descripta primum sub nomine laudato ex America accepi, serius sub eodem nomine *H. fuliginosam* Griff. (a Cl. Jay ad glaphyram citatam, licet a mea diversissimam); Cl. Gould (report p. 481.) *H. glaphyram* Say ab *H. cellaria* nullo modo diversam esse asserit.

121. **H. demissa Binn.** †

T. depresso-convexa, perforata, luteolo-cornea, nitens; anfr. 6 minute striati; apertura transversa; labrum simplex, acutum; basis planiuscula, medio subimpressa, glabra; umbilicus parvus. — Diam. $\frac{3}{8}$ poll. (Binn.)

Helix demissa Binn. in Bost. journ. IV. p. 361. t. 16. f. 16.

Habitat in Pennsylvania.

Obs. Differt ab *H. ligera* spira depressa. (Binn.) — An ejus varietas? An forte eadem ac Nr. 120?

122. **H. succinea Pfr.**

T. depressa, obsolete subperforata, tenuis, pellucida, nitida, succinea; sutura mediocris, submarginata; anfr. 5 celeriter accrescentes, vix convexiusculi; apertura lunaris; perist. simplex, acutum, margine columellari subreflexo, perforationem obsoletam tegente. — Diam. maj. 10, min. $8\frac{1}{2}$, alt. 6 mill. (Coll. Nr. 66.)

Helix succinea Pfr. in Proc. Zool. Soc. 1845. p. 39.

— — *Chemn.* ed. II. *Helix* N. 541. t. 87. f. 6—8.

β. Fascia obsoleta rubra ad peripheriam.

Habitat in provincia Albay insulae Luzou, var. in insula Mindoro (Cuming).

Hel. pinguis Krauss. *Zeit.* 1848. pag. 91. — *Natal.*

123. **H. insignis Orbigny.** †

T. perforata, orbiculata, subconvexa, apice obtusa, tenuis, diaphana, laevigata, brunneo-flavicans; anfr. 4; apertura rotunda; labrum tenue. — Alt. 4, diam. 8 mill. (O.)

Helix insignis (Helicella) Orb. synopsis. p. 5.

— — Orb. voy. p. 247. t. 26. f. 14—17.

Habitat in provincia Guayaquil Columbiac.

124. **H. hydatina Rossmässler.**

T. perforata, depressa, albida, pellucida, striatula; sutura marginata; anfr. 5 planiusculi, ultimus non descendens, basi subplanulatus; apertura depressa, oblique lunaris; perist. rectum, acutum, simplex, margine dextro antrorsum subarcuato, columellari vix reflexiusculo. — Diam. maj. $6\frac{1}{4}$, min. $5\frac{1}{2}$, alt. 3 mill. (Coll. Nr. 67.)

Helix hydatina Rossm. VIII. p. 36. f. 529.

— — *Chemn.* ed. II. *Helix* N. 224. t. 18. f. 18—21.

— *diaphana* Mühlf. Mus. (teste Rossm.)

Helicella diaphana Beck ind. p. 7.

Habitat in insula Corfu (Ziegl.), Neap. (Philippi), prope Smyrnam (Roth diss. p. 15).

125. *H. indentata* Say.

T. subperforata, depressa, pellucida, pallide cornea, nitidissima, lineis radiantibus impressis; regulariter distantibus (in anfractu ultimo circa 28) notata; spira planiuscula; anfr. $4\frac{1}{2}$ cecleriter accrescentes, ultimus circa foramen punctiforme excavatus; apertura depressa, ampla, lunaris; perist. simplex, acutum, margine supero antrorsum arcuato. — Diam. maj. 5, min. $4\frac{1}{2}$, alt. $2\frac{1}{2}$ mill. (Coll. Nr. 68.)

Helix indentata Say in Philad. journ. II. p. 372.

— — Binn. in Bost. journ. III. p. 415. t. 22. f. 3.

— — Gould report p. 481. f. 409.

— — Chemn. ed. II. Helix N. 190. t. 34. f. 12—15.

Habitat in America boreali, New Jersey (Say), Massachusetts (Gould), Philadelphia (Griffith).

126. *H. hyalina* Férussac.

T. vix subperforata, suborbiculata, aretispira, vitrea, diaphana, glabra, nitidissima; anfr. 6 planulati; apertura angustissime lunaris; perist. rectum, simplex. — Diam. maj. $4\frac{2}{3}$, min. 4, alt. 2 mill. (Coll. Nr. 69.)

Helix hyalina (Helicella) Fér. pr. 224 et Mus.!

— — Rossm. VIII. p. 36. f. 530.

— — Chemn. ed. II. Helix N. 554. t. 88. f. 20—23.

— contorta Held in Isis 1837. p. 304?

— — Kryn. Bull. Mosc. IX. p. 168? *)

Vitrea diaphana Fitzing. syst. Verz. p. 99.

Polita contorta Held in Isis 1837. p. 916?

Habitat in Germania, Gallia etc. rarior.

127. *H. crystallina* Müller.

T. perforata, depressa, vitrea, diaphana, glabra, nitidissima; anfr. 4— $4\frac{1}{2}$ planiusculi; apertura lunaris; perist. rectum, simplex. Diam. maj. 4, min. $3\frac{1}{2}$, alt. $4\frac{3}{4}$ mill. (Coll. Nr. 70.)

Helix crystallina Müll. verm. II. p. 23. N. 223.

— — Drap. p. 448. t. 8. f. 13—20.

— — C. Pfr. I. p. 46. t. 2. f. 36.

*) T. orbiculato-depressa, subtus convexiuscula, tenuissima, pellucida, glaberrima, nitida, lactea (colore efflato); anfr. 6 planulatis, fere aequalibus; spira vix exserta; suturis tenuibus, loco umbilici impressio infundibuliformis; apertura compresso-lunata ad umbilicum angustiore; perist. simplici. — Diam. $1\frac{1}{2}$, alt. $\frac{7}{8}$ ". — Forma et constructione sua superna Planorbem contortum bene commemorat, attamen spira ejus paululum exserta. Subtus sicuti *H. fulva* condita, praeter aperturam ad umbilicum angustatam et fere acutam. — Habitat in regionibus caucasicis. (Kryn. l. c.)

Helix crystallina Rossm. VIII p. 37. f. 534.

— — Morelet moll. du Port. p. 55.

— — Chemn. ed. II. Helix N. 555: t. 88. f. 27—30.

— *crystallina* (Helicella) Fér. pr. 223.

— — Lam. ed. Dh. 128. p. 87.

— *pellucida* Penn. Brit. Zool. IV. 138.

— *eburnea* Hartm. Neue Alpina I. p. 234.

— *vitrea* Brown in Edinb. journ. of nat. and geogr. sc. I. —
Isis 1832. p. 41.

Helicella crystallina Beck ind. p. 7.

Discus crystallinus Fitzing. syst. Verz. p. 99.

Polita crystallina Held in Isis 1837. p. 946.

Zonites crystallinus Gray Manual p. 476. t. 4. f. 42.

Habitat in Germania, Gallia, Helvetia, Auglia, Suecia etc.

128. *H. lucidella* Pfr.

T. minuta, perforata, depressa, striatula, nitidissima, brunnea; spira subplanulata; sutura albo-marginata; anfr. 4 plani, ultimus basi vix convexior, medio impressus, angustissime perforatus; apertura oblique lunaris; perist. simplex, obtusum, margine columellari declivi, vix incrassato. — Diam. maj. $3\frac{2}{3}$, min. 3, alt. 2 mill. (Mus. Cuming.)

Helix lucidella Pfr. in Proc. Zool. Soc. 1846. p. 41.

Habitat in provincia Cagayan insulae Luzon (Cuming).

Obs. Ex omnibus characteribus testa adulta videtur.

129. *H. planiuscula* Hutton. †

T. parvula, depressa, fusca, polita; anfr. 5, ultimi peripheria rotundata; apertura transversa. — Diam. 0,4 poll. (H.)

Helix planiuscula Hutt. in Journ. As. Soc. VII. P. 4. p. 218.

Habitat in Himalaya, prope Simla.

Obs. «Affinis *H. crystallinae*, obscurior et apice minus depresso.»

* * *

130. *H. capensis* Pfr.

T. perforata, globoso-depressa, tenuis, opaca, nitidula, alba, punctis nigricantibus conspersa, obsolete fusco-radiata; anfr. $4\frac{1}{2}$ vix convexiusculi; umbilicus angustissimus, non pervius; apertura magna, lunaris, intus fulva; perist. simplex, acutum. — Diam. maj. 9, min. $7\frac{1}{2}$, alt. 6 mill. (Coll. Nr. 71.)

Helix capensis Pfr. Symb. I. p. 40.

— — Chemn. ed. II. Helix N. 189. t. 34. f. 9—14.

— *irrorata* Ziegl. ined.

Habitat in promontorio bonae spei.

131. **H. Uitenhagensis Krauss.**

T. perforata, depresso-turbinata, striatula, alba, punctis fuscis conspersa; spira elevata, apice papillata; anfr. 6 vix convexiusculi, ultimus inflatus; apertura rotundato-lunaris, intus fuscidula; perist. simplex, acutum, margine columellari dilatato, reflexo. — Diam. maj. 11, min. $9\frac{1}{2}$, alt. $7\frac{2}{3}$ mill. (Coll. Krauss.)

Helix Uitenhagensis Krauss mss. *Sud. afr. Moll. S. a. f. 22*

— — Pfr. Symb. III. p. 66.

Habitat in promontorio bonae spei, ad radicem montis Winterhoeck, prope Uitenhagen.

Obs. Differt ab *H. capensi* magnitudine, spira papillata, anfractibus minus convexis, basi magis inflata.

132. **H. australis Menke.**

T. umbilicata, orbiculato-convexa, glabra, obsolete striata, albida, maculis radiantibus fasciisque interruptis obsolete cinereis picta; anfr. 5 rapido aumento crescentes; umbilicus angustus, apertus; aperturac patulac faux ferruginea. — Diam. 4, alt. 2, 3 lin. (Mke.)

Helix australis Mke moll. Nov. Holl. p. 6.

Habitat in Nova Hollandia prope fluvium Cygnorum.

Obs. « Affinis proxime *H. irroratae* Zgl., prom. bon. spei incolae, minori tamen et convexiori. »

133. **H. Kotschyi Pfr.**

T. angustissime umbilicata, orbiculato-convexa, tenuiuscula, oblique confertim striata, albida, corneo-marmorata vel fuscidula, fusco punctato-fasciata; spira elevatiuscula, apice corneo; anfr. $4 - 4\frac{1}{2}$ convexi, ultimus carinatus: carina antice evanescente; apertura obliqua, lunato-rotundata; perist. simplex, acutum, margine columellari subdilatato. — Diam. maj. $8\frac{1}{2}$, min. $7\frac{1}{2}$, alt. 5 mill. (Coll. v. d. Busch.)

Helix Kotschyi Pfr. Symb. III. p. 96.

Habitat in Persia. (Kotschy teste Parreyss.)

* * *

134. **H. flammulata (Vitrina) Quoy. †**

T. depresso-globosa, perforata, pellucida, fragilis, levis, fulva, flammulis rufis cincta; apertura semilunata, margine sinistro non inflexo; anfr. $3\frac{1}{2}$ convexiusculi. — Diam. maj. 6, min. 5, alt. $3\frac{1}{2}$ lin. (Q.)

Vitrina flammulata Quoy et Gaim. Astrol. Zool. II. p. 136. t. 11. f. 5 — 7.

Vitrina flammulata Lam. ed. Dh. VII. p. 730. N. 6.

Nanina flammulata Pfr. Symb. II. p. 63.

Habitat in insula Celebes.

Obs. Animal Naninae, nec Vitrinae ex iconc Quoyi.

§. 13.

135. *H. rapa* Müller.

T. perforata (imperforata) subglobosa, punctis pertusa, fascia sanguinea, anfractu superne introrsum deflexo. — Diam. 48 lin. (Müll.)

Helix rapa Müll. verm. II. p. 67. N. 261.

— — Chemn. IX. P. 2. p. 134. t. 131. f. 1176.

— — Pfr. in Zeitschr. f. Mal. 1844. p. 178.

Habitat in insula Amboina (Beck).

Obs. Cl. Müller speciem sic descripsit: «testa tota alba, superne passim in luteum vergit, subtus perforata; apertura lunaris absque labio. Fascia in medio anfractus majoris sanguinea dimidiam peripheriam tantum occupat. Margo superior anfractuum in aperturam deflectitur, seu simbriam unius lineae latitudinis argutissimam proximo anfractui agglutinatam format; alium characterem suppetunt puncta innumera, aequalia, quibus testa ubique pertusa est, nudo oculo difficile conspicua.» — Ex hac descriptione, juncta cum iconc Chemnitziana, in collectione mea testam adesse arbitror, quae H. rapae Müll. omnino convenit, et quae specimen decoloratum varietatis minoris *H. sagittiferae* esse videtur. Quare forsàn haec species pro *H. rapa* Müll. agnoscenda? An potius nomen Müllerianum tamquam dubium ob descriptionem incompletam speciminis evidenter morborum relinquendum sit?

136. *H. sagittifera* Pfr.

T. subperforata, depressa, tenuis, pellucida, oblique striata et obsolete rugosa, fulva, maculis sagittiformibus et ad carinam obsoletam fascia unica, rufa ornata; sutura impressa, ad anfractum ultimum subcanaliculata; anfr. $4\frac{1}{2}$ planiusculi, ultimus inflatus; apertura perobliqua, lunato-ovalis, intus lactea; perist. simplex, ad columellam subincrassatum, vix reflexum, margine supro deflexo. — R. a. = 5 : 6. — Diam. maj. 47, min. 38, alt. 26 mill. (Coll. Nr. 72.)

Helix sagittifera Pfr. in Proc. Zool. Soc. 1842. p. 86.

— — Phil. Icon. I. 4. p. 77. t. 4. f. 1.

— — (Nanina?) Pfr. Symb. II. p. 20.

— — Chemn. ed. II. Helix N. 163. t. 32. f. 10. 11.

β. Distinctius carinata, superne intense rufa, infra carinam fascia nigricante diluta, basi olivaceo-fulva, maculis sagittiformibus obsoletioribus.

γ. Major, solidior: diam. maj. 67, min. 54, alt. 35 mill. (Mus. Cuming.)

Habitat in insula Luzon, α prope Sinait, β prope Bolinao, γ S. Juan, prov. Cagayan (Cuming).

137. **H. Maderaspatana Gray.**

T. angustissime umbilicata, depresso-globosa, striato-rugosa, pallide rufa, albido-eincta et nebulosa; anfr. 5—6 vix convexiusculi, ultimus subinflatus; apertura obliqua, lunato-ovalis; perist. simplex, ad umbilicum subincrassatum, reflexum. — Diam. maj. 32, min. 26½, alt. 19 mill. (Spec. coll. Gray.) Mea (Coll. Nr. 73.) paulo minora.

Helix Maderaspatana Gray in Proc. Zool. Soc. 1834. p. 67.

— — Müll. synops. p. 9.

— — Chemn. ed. II. Helix N. 170. t. 34. f. 7. 8.

— *Korékouké* (Helicella) Fér. pr. 237 et Mus.!

— *pondicheriensis* Pfr. Symb. I. p. 38.

Nanina Korékouké Beck ind. p. 4.

Habitat in India orientali, circa Pondiehery, Madcraspatam, Mangalore.

138. **H. Himalayana Lea.**

T. anguste umbilicata, sinistrorsa, depressa, tenuis, pellucida, superne costulata, pallide fulva; spira parum elevata; anfr. 4½—5 planiusculi, ultimus subcarinatus, infra carinam fuseo-fasciatus, basi tumidus; apertura rotundato-lunaris; perist. simplex, acutum, margine eolumellari breviter descendente, reflexo. — Diam. maj. 30, min. 23, alt. 15 mill. (Mus. Cuming. et Coll. Nr. 74 spec. juv.)

Helix Himalana Lea obs. I. p. 467. t. 49. f. 66.

— *Himalayana* Benson in Zool. Journ. V. (1835.) p. 464.

Habitat in montibus Himalayae.

Obs. Affinis H. laevipedi (Nr. 462); differt testa tenui, pellucida, superne costata, apertura magna, etc.

139. **H. interrupta Benson. †**

T. sinistrorsa, orbiculato-convexa, infra tumida, umbilicata, ad peripheriam obtuse angulata, longitudinaliter confertissime striata, supra striis interruptis fasciis transversalibus dispositis; spira apice obtusa; perist. tenue, acutum. (B.) — Diam.?

Helix interrupta Bens. in Proc. Zool. Soc. 1834. p. 90.

— — Müll. synops. p. 40.

— — Bens. in Zool. Journ. V. p. 464.

Habitat in rupibus umbrosis Sicrigali et prope Gangis ostiorum fluvium Jellinghy dietum.

Obs. Differt ab H. Himalayana spira minus elevata et sculptura peculiari. (Bens.)

140. **H. umbilicaria** Le Guillou.

T. perforata, orbiculato-convexa, solida, opaca, nitida, irregulariter striata, alba, fasciis 3 inaequalibus, 4 ad suturam, 2 ad peripheriam, areaque basali castanea ornata; anfr. 7 vix convexiusculi, ultimus obsolete angulatus; apertura obliqua, lata, lunaris; perist. simplex, obtusum, margine basali subinerassato, columellari dilatato, reflexo, perforationem non tegente. — Diam. maj. 33, min. 28, alt. 17 mill. (Coll. com. de Seekendorff.)

Helix umbilicaria Le Guillou in Revue zool. 1842. p. 137.

— — Chemn. ed. II. Helix N. 63. t. 11. f. 14. 15.

β. Minor: diam. maj. 23, min. 20, alt. 12 mill. (Coll. Nr. 75.)

Habitat in insula Sumatra.

Obs. Differt a sequente testa solida, laeviore, opaca etc.

141. **H. javanica** Lamarck.

T. perforata, orbiculato-convexa, superne confertim costulato-striata, basi sublaevigata, lutescenti-cornea, fasciis 3 angustis rufis zonata: 2 ad peripheriam approximatis, tertia ad suturam; spira brevis; anfr. 6 planiusculi, ultimus subcarinatus: carina antice evanescente; area umbilicalis rufa; apertura subangulato-lunaris; perist. simplex, rectum, margine columellari ad perforationem apertam breviter dilatato, reflexiusculo. — R. a. = 3 : 5. — Diam. maj. 28, min. 23, alt. 15—16 mill. (Coll. Nr. 76.)

Helix javanica Lam. 40. p. 76. ed. Dh. p. 45.

— — Chemn. ed. II. Helix N. 62. t. 11. f. 12. 13.

— *javacensis* (Helicella) Fér. pr. 234. Hist. t. 92. f. 2.

Nauina javanensis Gray in Proc. Zool. Soc. 1834. p. 59.

— *javana* Beck ind. p. 4.

Habitat in insula Java.

Obs. Conf. H. naninoides Nr. 157.

142. **H. laevigata** (Mesomphix) Rafinesque.

T. perforata, depressa, tenuis, luteo-cornea, superne minute costulato-striata, basi convexiuscula, sublaevigata; spira vix elevata; anfr. 5 planiusculi, ultimus latus, antice non descendens; apertura ampla, late lunaris, intus eocrulescens; perist. acutum, rectum, marginibus conniventibus, columellari vix dilatato, reflexiusculo. — Diam. maj. 18, min. 15, alt. 9 mill. (Coll. Nr. 77.)

Helix laevigata (Helicella) Fér. pr. 221. Hist. t. 82. f. 61

— — Chemn. ed. II. Helix N. 522. t. 84. f. 17—19.

— *inornata* Binn. in Bost. journ. III. p. 449. t. 24. f. 3?

Helix inornata Griffith in sched.!

Mesomphix laevigata Rafin. et Beck ind. p. 7.

Habitat in Pennsylvania, Kentucky.

Obs. Elsi auctores americani nonnulli hanc speciem cum *H. inornata* Sayi identicam credant, tamen descriptio Sayana nullo modo quadrat. (Conf. Nr. 201.)

143. *H. georgiana* Quoy. †

T. perforata, orbicularis, translucida et fragilis, desuper valde striata, flava; spira parum elevata; anfr. 4, ultimus cylindraceus, antice deflexus; apertura lunari-rotundata; perist. simplex, acutum, margine eolumellari reflexiuseulo. (Q.) — Diam. maj. $40\frac{1}{2}$, min. 8 mill. (ex ie.)

Helix georgiana Quoy et Gaim. Astrol. II. p. 129. t. 10. f. 26—30.

— — Lam. ed. Dh. 166. p. 107.

Habitat ad portum regis Georgii Novae Hollandiae.

144. *H. cruentata* (Stenopus) Guilding.

T. aperte perforata, depressa, transverse plicatula, eorneo-succinea; spira planiuscula; anfr. 5 vix convexiuseuli; ultimus multo latior, circa perforationem impressus; sutura marginata; apertura rotundato-lunaris; perist. simplex, acutum, margine eolumellari intrante. — Diam. maj. $8\frac{1}{2}$, min. $7\frac{3}{4}$, alt. $4\frac{1}{2}$ mill. (Coll. Metcalf.)

Stenopus cruentatus Guild. in Zool. Journ. III. p. 527. t. 15. f. 4—5.

— — Swains. Malac. p. 190. f. 33.

— — Sow. Conch. Man. f. 515.

Habitat in insula St. Vincentii.

Hel. aenea Krauss. J. n. f. 18. Zc. 1848. p. 72—73.

145. *H. revelata* Férussac.

T. perforata, depresso-globosa, tenuis, diaphana, nitida, virenti-eornea, subtilissime striata et corrugatula, hispida: pilis sparsis, brevibus, rigidulis; anfr. 4 convexi, rapide accrescentes, ultimus inflatus; apertura lunato-circularis; perist. simplex, acutum, margine eolumellari subdilato, patente. — Diam. maj. 7, min. 6, alt. 5 mill. (Coll. Nr. 78.)

Helix revelata (Helicella) Fér. pr. 273.

— — Mich. compl. p. 27. t. 15. f. 6—8.

— — Lam. ed. Dh. 118. p. 83.

— — Gray Manual p. 152. t. 11. f. 133.

— — Chemn. ed. II. Helix N. 188. t. 34. f. 5—8.

— *badiella* Ziegl. (teste Anton.)

Habitat in alpium vallibus (Mich.), in Gallia passim (Fér.), in insulis Guernsey et Jersey.

146. **H. marmorella Pfr.**

T. perforata, depressa, tenuissima, distanter costulata, pellucida, straminea, strigis obliquis et maculis rufis marmorata; spira plana; anfr. 3 vix convexiusculi, rapide accrescentes, ultimus basi paulo convexior; apertura perobliqua, ampla, lunato-ovalis; perist. simplex, acutum, marginibus callo tenui junctis, supero antrorsum subarcuato. — Diam. maj. 7, min. $5\frac{1}{2}$, alt. 3 mill. (Mus. Cuming. et Coll. Nr. 79.)

Helix marmorella Pfr. in Proc. Zool. Soc. 1845. p. 125.

— — Chemn. ed. II. Helix N. 556. t. 88. f. 17—19.

Habitat in insula Juan Fernandez.

147. **H. helicophantoides Pfr.**

T. perforata, depressa, tenuis, oblique et confertim costulato-striata, straminea, rufo tessellata et strigata; spira planiuscula; anfr. $3\frac{1}{2}$ vix convexiusculi, rapide accrescentes, ultimus depressus; apertura perobliqua, ampla, subovalis; perist. simplex, acutum, marginibus approximatis, callo tenuissimo junctis. — Diam. maj. $4\frac{2}{3}$, min. 4, alt. 2 mill. (Mus. Cuming. et Coll. Nr. 80.)

Helix helicophantoides Pfr. in Proc. Zool. Soc. 1845. p. 125.

— — Chemn. ed. II. Helix N. 557. t. 88. f. 11—13.

Habitat in insula Juan Fernandez.

Obs. Similis praecedenti, nec non Daudehardiae rufae. Num forsanhujus generis?

§. 14.

148. **H. ovum Valenciennes.**

T. subperforata, globoso-depressa, oblique striata et irregulariter rugosa, lincis impressis, apice confertissimis, in anfractibus ultimis remotis et irregularibus subdecussata, obtuse carinata, unicolor saturate fulva vel fascia supra carinam pallida, infra carinam purpurco-nigricante ornata; sutura canaliculata; anfr. 5 superne tumidi, ultimus ad columellam excavatus; apertura lunato-elliptica, intus nitide lactea; perist. simplex, crassum, margine dextro arcuatim dilatato. — R. a. = 7 : 13. — Diam. maj. 115, min. 80, alt. 70 mill. (Mus. Cuming.) — Diam. maj. 92, min. 73, alt. 55 mill. (Coll. Nr. 81.)

Helix ovum Val. in Humb. Voy. Zool. II. p. 240. t. 57. f. 1.

Eurycratera olaheitana Beck ind. p. 46.

Chromocochlea tahitana Hartm. Erd- u. Süßw. Gast. I. p. 186.
t. 65. 66.

β. Testa nigricante, ad peripheriam fascia lata epidermidis cinereae cincta. (Mus. Cuming.)

γ. Minor, magis rugosa, quasi malleata: diam. maj. 68, min. 54, alt. 42 mill. (Spec.)

Habitat in insula Luzon, β in ins. Panay Philippinarum (Cuming).

149. H. Zeus Jonas.

T. oblique perforata, subdepresso-convexa, solida, rugis obliquis striisque spiralibus elevatis sculpta, rufa, strigis albis fulminatis superne ornata; anfr. $4\frac{1}{2}$ convexi, ultimus basi convexus, medio angulatus, infra carinam sulcis profundis, concentricis exaratus; apertura perobliqua, subtrapeziformis, intus margaritacea; perist. acutum, rectum, margine columellari brevi, supra perforationem reflexo. — Diam. maj. 60, min. 47, alt. 30 mill. (Coll. Nr. 82.)

Helix Zeus Jonas in Proc. Zool. Soc. 1842. p. 188.

— — *Phil. Icon.* I. 3. p. 47. t. 3. f. 4.

— — *Chemn. ed. II. Helix* N. 160. t. 26. f. 

— *Fér. hist.* t. 64 A. f. 9.

Habitat in insula Mindoro Philippinarum.

Obs. Similis sequenti, differt angulo acutiore, anfractibus convexioribus, ultimo grosse sculpto, concentricae profunde exarato.

150. H. Lamarckiana Lea.

T. oblique perforata, depressa, subearinata, tenuis, irregulariter striata et rugulosa, olivaceo-rufa, infra carinam fascia nigro-rufa, deorsum diluta, ornata; sutura impressa; spira parum elevata; anfr. $4\frac{1}{2}$, supremi planiusculi, minutissime decussati; apertura late elliptica, intus lactea vel opalina; perist. simplex, tenue, ad columellam dilatatum, reflexum, umbilicum obliquum semitegens. — R. a. = 5 : 12. — Diam. maj. 60, min. 48, alt. 32 mill. (Coll. Nr. 83.)

Helix Lamarckiana Lea in Transact. Am. phil. Soc. VII. p. 461.
t. 42. f. 44.

— — *Pfr. Synb.* II. p. 19. (excl. var. β.) 

— — *Chemn. ed. II. Helix* N. 159. t. 26. f. ~~153~~

Habitat in insula Masbate Philippinarum (Cuming).

Obs. Differt ab H. ovo testa tenui, depressa, perforatione aperta etc.

151. H. Mülleri Pfr.

T. obtecte perforata, convexo-orbiculata, subearinata, solida, fulva, basi saturator, infra carinam fascia lata, rufa notata; sutura

linearis; anfr. $4\frac{1}{2}$ rapide crescentes, supremi plani, minutim rugoso-reticulati, ultimus versus aperturam convexus, irregulariter malleato-rugosus; apertura lunato-ovalis; perist. simplex, margine supero subinflexo, columellari breviter expanso, perforationem tegente. — R. a. = 13 : 24. — Diam. maj. 39, min. 33, alt. 23 mill. (Coll. Nr. 84.)

Helix Mülleri Pfr. in Zeitschr. f. Mal. 1844. p. 178.

— — Chemn. ed. II. *Helix* N. 156. t. 25. f. 3. 4.

— ovum γ Pfr. Symb. II. p. 20.

Habitat in insula Mindoro Philippinarum (Cuming).

Obs. Differt ab H. ovo praeter magnitudinem sutura lineari, anfractibus planis, etc.

152. *H. bulla* Pfr.

T. subperforata, globoso-depressa, tenuissima, pellucida, striis confertis spiralibus et obliquis minutissime decussata, subcarinata, pallide fulva, ad eariuam rufo-cingulata; sutura vix impressa; spira parum exserta; anfr. 4 planiusculi; apertura lunato-rotundata, intus margaritacea, unifasciata; perist. simplex, margine supero introsum flexo, columellari vix expanso. — R. a. = 4 : 2. — Diam. maj. 40, min. 34, alt. 23 mill. (Coll. Nr. 85.)

Helix bulla Pfr. in Proc. Zool. Soc. 1842. p. 151.

— — Phil. Icon. I. 4. p. 77. t. 4. f. 2.

— — Chemn. ed. II. *Helix* N. 175. t. 33. f. 3. 4.

— vesica (Nanina?) Pfr. Symb. II. p. 21. Nec Lea.

Habitat in provincia Albay insulae Luzon (Cuming).

153. *H. Sowerbyana* Pfr.

T. subperforata, depressa, solida, nitidiuseula, striis concentricis confertis et striis incrementi distinctis subdecussata, olivaceo-lutescens; spira depressa; anfr. $4\frac{1}{2}$ planiusculi, rapide accrescentes, ultimus depressus, antice dilatatus, basi circa perforationem obsoletam profunde excavatus; apertura perobliqua, lunato-ovalis, intus lactea; perist. subincrassatum, marginibus callo tenuissimo junctis, supero antrorsum arcuato, columellari reflexiusculo, subdentato. — R. a. = 4 : 2. — Diam. maj. 52, min. 44, alt. 25 mill. (Mus. Cuming. spec. max.) — Diam. maj. 37, min. 30, alt. 49 mill. (Coll. Nr. 86.)

Helix Sowerbyana Pfr. Symb. I. p. 36.

— — Phil. Icon. I. 2. p. 21. t. 2. f. 4.

— — Chemn. ed. II. *Helix* N. 157. t. 25. f. 5. 6.

β . Fusco-castanea, spira paulo elatiore: diam. maj. 34, min. 29, alt. 49 mill. (Spec.)

Habitat in insulis Carolinis.

154. **H. Belangeri Deshayes.** †

T. orbiculato-globosa, subdepressa, translucida, rosea, subtus albicans, umbilicata, superne striis tenuibus decussata; apertura magna, obliqua; labrum simplex. — Diam. 21 — 22 lin. (Dh.) — Diam. maj. 46, min. 37, alt. 28 mill. (ex ic.)

Helix Belangeri Desh. in Bélang. voy. Zool. p. 43. t. 1. f. 1 — 3.

— — *Lam.* ed. Dh. 1857. p. 101.

Nanina Belangeri Beck ind. p. 4.

Habitat ad Pondichery (Bél.), Malabar (Beck).

155. **H. Nouleti Le Guillou.** †

T. rotundata, conico-depressa, umbilicata, castanea, lucida, longitudinaliter et oblique pulchre striata, subtus depressa, nitidior, sublaevigata; anfr. 5 — 6 depresso-convexi, transversim laevissime superneque striolati; spira spadicea, exertiuscula, obtusa; apertura obliqua, labio acuto, basi subinerassato, albido, umbilicium minimum occultante aut suboccultante. — Diam. 30, alt. 49 mill. (G.)

Helix Nouleti Le Guill. in Revue zool. 1842. p. 137.

Habitat in insulis Viti.

155^a. **H. rubricata Gould.** †

T. globoso-conica, solida, vix perforata, supra nitida, rufo-castanea, striis radiantibus gregatim dispositis et striis volventibus decussata, infra glaberrima, livido-castanea, ad centrum declivis; spirae anfr. 6 convexi, ampli; sutura submarginata; apertura semilunaris, fauce livida; labrum simplex, ad columellam reflexum, album. — Lat. 4, alt. $\frac{3}{5}$ poll. (G.)

Helix (Nanina) *rubricata* Gould 1846. Exped. shells p. 23.

Habitat in insulis Feejee, Lebouka.

Obs. «Num forte H. Nouleti Le Guill.?»

156. **H. Grateloupi Pfr.**

T. subperforata, semiglobosa, nitidiuscula, superne regulariter et confertim striata, lineis spiralibus irregulariter decussata, livido-castanea, subtus laevigata; anfr. 6 convexiusculi, ultimus basi subplanulatus; sutura submarginata; apertura lunaris, intus concolor; perist. simplex, acutum, margine dextro sinuoso, columellari calloso, subreflexo. — Diam. maj. $26\frac{1}{2}$, min. 24, alt. 15 mill. (Coll. Nr. 87.)

β. Major: diam. maj. 33, min. 29, alt. 20 mill. (Coll. Walton.)

Habitat circa Singapore, rarius in insula Chusan.

Obs. Variat striis concentricis distinctis vel omnino obsoletis, colore fulvido vel fere albo, carina magis minusve distincta.

158. **H. decussata (Nanina) Benson. †**

T. cornea, discoidea, subdepressa, umbilicata; spira exertiuscula, obtusa; anfr. 7 supra plani, ultimus obsolete angulatus; epidermis supra argute decussata, infra radiatim striata; apertura transversa, lunata. — Diam. 4 poll., axis 0,35. (B.)

Nanina decussata Bens. in Journ. As. Soc. V. p. 350.

Habitat in Bengalìa.

Obs. «Differt ab *H. vitrinoide* sculptura, spira elatiore et peripheria magis angulata.» (Bens.)

159. **H. Theodori Philippi.**

T. perforata, depressa, tenuis, subdiaphana, corneo-lutescens, superne confertissime costulata, lineis concentricis impressis decussata, basi laevior, excentrice striatula, lineis concentricis versus perforationem sensim evanescentibus; spira parum elevata, obtusiuscula; sutura impressa, rufo obsolete marginata; anfr. 6½ vix convexiusculi, lente accrescentes, ultimus obsolete angulatus; apertura depressa, lunaris; perist. simplex, rectum, margine colu-

*) T. orbiculato-conica, subumbilicata, tenui, subdiaphana, rufescente, subtilissime striata, striis granulosis; spira turgida, apice obtusa; anfractu ultimo aliquando fascia albescente cincto; labro simplice, acuto. — Alt. 16, diam. 27 mill. (Grat. f. c.)

mellari peroblique descendente, superne brevissime reflexo. — Diam. maj. 26, min. 23, alt. 13 mill. (Coll. Nr. 89.)

Helix Theodori Phil. in Zeitschr. f. Malak. 1846. p. 191.

— — Chemn. ed. II. Helix N. 687. t. 110. f. 4—3.

Habitat prope Mergui Indiae orientalis. Legit Th. Philippi.

Obs. An forte praecedenti nimis affinis?

— 160. **H. bistrialis (Nanina) Beck.**

T. subperforata, globoso-depressa, tenuis, fragilis, subtilissime striata, striis confertis obsoletis sub lente decussata, stramineo-cornea, lineis 2 rufis approximatis medio cincta; spira vix convexa; anfr. 4 planiusculi, rapide crescentes; apertura ampla, lunari-ovalis; perist. simplex, margine columellari recurvato. — Diam. maj. 34, min. 25, alt. 45 mill. (Coll. Nr. 90.)

Habitat in insula Luzon (Cuming).

Obs. Affinis *H. gummata*, epidermide setigera, peripheriam deorsum superante, facile distinguenda.

§. 16.

— 171. **H. Panayensis (Carocolla) Broderip.**

T. obtecte perforata, depressa, orbicularis, carinata, crassiuscula, superne griseo-fusca, minutissime granulata, basi radiatum striata, nitidissima, olivacea; spira depresso-conoidea; anfr. 6 planulati, ultimus non deflexus; apertura angulato-lunaris, intus albida; perist. simplex, basi incrassatum, ad columellam expansiusculum. — R. a. = 5 : 6. — Diam. maj. 44, min. 40, alt. 21 mill. (Coll. Nr. 99.)

Carocolla Panayensis Brod. in sched. Cuming.

Helix Panayensis *Pfr.* in Proc. Zool. Soc. 1842. p. 86.

— — *Pfr.* Symb. II. p. 36.

— — *Chemn.* ed. II. *Helix* N. 245. t. 30. f. 1—3.

β. Spira elatiore, anfractibus ultimis tumidis, superne saturate rufa, basi nigricante, deorsum pallescente.

Helix Panayensis var. *Chemn.* ed. II. *Helix* t. 30. f. 4.

Habitat in insula Panay Philippinarum, var. β ad Cagayan insulae Luzon (Cuming).

— 172. **H. semiglobosa Pfr.**

T. subperforata, semiglobosa, tenuis, lutescenti-cornea, supra minutissime granulata; sutura vix impressa; anfr. 6 plani, ultimus carinatus, infra carinam laevigatus, nitidus, fascia diluta, brunnea notatus; apertura lunato-elliptica, intus fasciata; perist. simplex, acutum, margine columellari late reflexo, umbilicum angustissimum semitegente. — R. a. = 11 : 16. — Diam. maj. 44, min. 39, alt. 26 mill. (Mus. Cuming.)

Helix semiglobosa *Pfr.* in Proc. Zool. Soc. 1845. p. 38.

β. Anfractu ultimo magis inflato, saturatius brunnescente. (Mus. Cum.)

Habitat in insula Leyte, var. β prope Catbalonga insulae Samar Philippinarum (Cuming).

Obs. Affinis *H. Panayensi*. Differt testa tenui, spira semiglobosa, carina obtusa, perist. acuto, umbilico non clauso. Ab *H. semigranosa* differt testa

tenui, anfract. planis, celeriter crescentibus, granulis minutissimis, — ab H. gummata (cui forma simillima) carina, spira obtusa etc.

173. *H. porphyria* Pfr.

T. perforata, depressa, solida, oblique rugoso-striata, rufa, maculis et strigis creberrimis, flavido-albidis, subprominulis mar-morata, carinata, infra carinam fusco-fasciata, basi olivaceo-fulva, nitidior; anfr. $4\frac{1}{2}$ planulati, regulariter accrescentes, ultimus circa perforationem apertam excavatus; apertura subrhombea; perist. simplex, tenue, margine columellari arcuatim reflexo. — R. a. = 3 : 5. — Diam. maj. 43, min. 38, alt. 26 mill. (Coll. Nr. 100.)

Helix porphyria Pfr. in Proc. Zool. Soc. 1842. p. 87.

— — (Nanina?) Pfr. Symb. II. p. 20.

— — Phil. Icon. I. 2. p. 22. t. 2. f. 3.

— — Chemn. ed. II. Helix N. 164. t. 32. f. 12, 13.

Habitat in insula Bureas Philippinarum (Cuming).

174. *H. Darondeau* Souleyet. †

T. orbicularis, umbilicata, carinata, supra depresso-convexa; dilute fusco-olivacea, subtus convexa, castanea; anfr. 5 oblique rugosiusculi, transversim tenue et crebre striati; apertura ovato-rotundata, ad umbilicum anguste concava, intus fusca, albo-fasciata; perist. acutum; columella supra umbilicum late reflexa, alba; umbilicus medioeris, profundus, ad peripheriam depressus. — Diam. 44, alt. 49 mill. (Soul.)

Helix Darondeau Soul. in Revue zool. 1842. p. 101.

Habitat in insula Luzon (Soul.).

175. *H. Rumphii* v. d. Busch.

T. perforata, sinistrorsa, orbiculata, carinata, saturate cinna-momea, ad carinam albido-fasciata, superne planiuscula, irregula-riter ruguloso-striata, basi convexa, striata; anfr. $5\frac{1}{2}$ plani; aper-tura subrhombea, intus fusca; perist. simplex, margine columel-lari superne in laminam triangularem, patentem abeunte. — R. a. = 4 : 7. — Diam. maj. 44, min. 36, alt. 20 mill. (Coll. Nr. 101.)

Helix Rumphii v. d. Busch in Phil. Icon. I. 1. p. 9. t. 1. f. 2.

— — (Nanina?) Pfr. Symb. II. p. 20.

— — Chemn. ed. II. Helix N. 60. t. 44. f. 7—9.

Habitat in insula Java (Winter).

176. *H. retrorsa* (Caracolla) Gould.

T. perforata, sinistrorsa, sublenticularis, tenuiuscula, striata lincisque impressis subspiralibus, undulatis et confluentibus sub-tilissime rugulosa, pallide castanea vel luteo-fusca; spira parum elevata, apice acutiuscula; anfr. $5\frac{1}{2}$ rapide accrescentes, vix con-

vexiuseculi, ultimus acute carinatus, basi gibbus; apertura rotundato-lunaris; perist. simplex, margine columellari non reflexo. — Diam. maj. 44, min. 33, alt. 20 mill. (Coll. Nr. 102.)

Helix (Caracolla) *retrorsa* Gould in Bost. journ. IV. 4. p. 455. t. 24. f. 4.

— *retrorsa* Chemn. ed. II. *Helix* N. 686. t. 110. f. 4—6.

Habitat in imperio birmano Indiae orientalis, prope Tavoy (Gould), prope Mergui (Th. Philippi).

Obs. Differt ab II. Rumphii spira elata, sculptura etc.

177. *H. Janus* Chemnitz.

T. perforata, sinistrorsa, orbicularis, tenuis, diaphana, oblique regulariter et confertim costulato-striata, superne fusca, basi convexa rufo-castanea, nitidiusecula; spira late conoideo-depressa; anfr. 7 planulati, ultimus carinatus; apertura lunaris; perist. tenue, acutum, margine columellari reflexiuseculo. — R. a. = 4 : 5. — Diam. maj. 36, min. 34, alt. 17 mill. (Coll. Nr. 103.)

Helix Janus bifrons Chemn. XI. p. 307. t. 243. f. 3016. 17.

— — — (*Helicella*) *Fér.* pr. 233.

— — *Pfr.* in Proc. Zool. Soc. 1842. p. 87.

— *Balesteriana* Lea in Transact. Am. phil. Soc. VII. p. 460. t. 12. f. 10.

Ariophanta Janus Beck ind. p. 5.

Habitat in monte Ophir peninsulae Malaccanae (Cuming).

178. *H. bataviana* v. d. Busch.

T. perforata, depresso-globosa, tenuis, obtuse carinata, superne cinnamomea, oblique confertim costulata, subtus castanea, striata, versus umbilicum pallida, area umbilicali castanea; anfr. $6\frac{1}{2}$ vix convexiuseculi; apertura angulato-lunaris; perist. subsimplex, ad perforationem arcuatim reflexum. — R. a. = 2 : 3. — Diam. maj. $33\frac{2}{3}$, min. 29, alt. $17\frac{1}{2}$ mill. (Coll. Nr. 104.)

Helix bataviana v. d. Busch in Phil. Icon. I. 4. p. 9. t. 1. f. 3.

— — — (*Nanina?*) *Pfr.* Symb. II. p. 17.

— — *Chemn.* ed. II. *Helix* N. 58. t. 11. f. 1—3.

Habitat in insula Java (Winter).

179. *H. Cuvieriana* Lea.

T. aperte perforata, orbiculata, tenuis, pellucida, oblique striata, carinata, olivaceo-lutescens, infra carinam fascia lata rufa, deorsum diluta, ornata; spira vix elata; anfr. 5 planulati, ultimus basi convexus; apertura lata, lunaris; perist. simplex, acutum.

margine columellari breviter reflexiusculo. — R. a. = 4 : 5. — Diam. maj. 32, min. 28, alt. 44—45 mill. (Coll. Nr. 405.)

Helix Cuvieriana Lea in Transact. Am. phil. Soc. VII. p. 461. t. 12. f. 12.

— — (Nanina?) *Pfr.* Symb. II. p. 18.

— — *Chemn.* ed. II. *Helix* N. 461. t. 26. f. 7—9.

Habitat in insula Luzon (Cuming).

180. *H. Chastellii* Férussac.

T. perforata, depressa, lenticularis, carinata, oblique striata, albida, maculis variis fuscis variegata, medio albo-cingulata; anfr. 6—6½ planulati; apertura subangulato-lunaris, intus fusca; perist. simplex, acutum, margine columellari dilatato, reflexo, perforationem non occultante. — Diam. maj. 23, min. 20½, alt. 42 mill. (Coll. Gray. et Walton.) — Diam. maj. 27, min. 24, alt. 44 mill. (ex ic. Féruss.)

Helix Chastellii (Helicella) Fér. hist. (1832.) t. 80. f. 4.

— — *Chemn.* ed. II. *Helix* N. 445. t. 74. f. 8—10.

— *Cracherodii* Gray in Proc. Zool. Soc. 1834. p. 67.

— — *Müller* synops. p. 9.

Habitat in India orientali? (Gray.)

181. *H. exilis* Müller.

T. perforata, subdiscoidea, carinata, pellucida, tenera, pallide fulvida, superne depressa, argute striata, subtus convexior, striis minus distinctis; anfr. 6 planiusculi, ultimus non descendens, fascia angusta, rufa infra carinam ornatus; area umbilicalis interdum rufo-fusca; apertura lata, elliptica; perist. simplex, acutum, margine columellari brevissime reflexo. — Diam. maj. 35, min. 30, alt. 45 mill. (Mus. Cuming.)

Helix exilis Müll. verm. II. p. 22. N. 221.

— *explanata* Quoy et Gaim. Astrol. Zool. II. p. 123. t. 10. f. 40—43!

— — *Lam.* ed. Dh. 194. p. 424.

— Fér. hist. t. 64 A. f. 1?

Nanina exilis Beck ind. p. 4

Habitat ad portum Dorey Novae Guineae (Quoy), in insula Ticao Philippinarum (Cuming).

Obs. Cl. Beck *H. rufam* Less. huc refert, et Cl. Cantraine *H. aciem* Partsch (late umbilicatam) eandem esse putat!

182. *H. Novae Hollandiae* (Carocolla) Gray. †

T. orbicularis, conica, subdepressa, subperforata, tenuis, laevis, tenuissime elevato-punctata, pallide fulva; spira conica, convexa; anfr. 6 distincti, fascia brunnea submediana, ultimus

pallide angulariter carinatus, antice convexus, circum axin saturate brunneus; apertura subangulata; perist. pone carinam subinflexum, subincrassatum, reflexum, nigrum; labium internum tenue, brunneum; faux albida, fascia pellucida. — Diam. 44, axis 9 lin. (Gr.)

Carocolla Novae Hollandiae Gray in Proc. Zool. Soc. 1834. p. 67.

— — — *Müller* synops. p. 44.

Habitat in Nova Hollandia ad flumen Macquarrie.

183. *H. induta* Pfr.

T. perforata, lenticularis, acute carinata, solida, superne confertim plicato-striata, lineis concentricis confertis decussata, subtus striata, spadicea, basi pallescens, circa perforationem castaneo-areolata, epidermide tenuissima corneo-grisea undique induta; anfr. 5 plani, sensim aerecentes; apertura subrhombea; perist. simplex, margine columellari vix reflexiusculo. — Diam. maj. 24, min. 18, alt. 14 mill. (Mus. Cuming.)

Helix induta Pfr. in Proc. Zool. Soc. 1845. p. 128.

Habitat . . . ?

184. *H. jervisensis* Quoy. †

T. globosa, subfragilis, perforata, valde et oblique striata, carinata, fulva, suturis et rima umbilicari rubentibus; anfr. 5 — 6, ultimus ventricosus; apertura lata, semilunata; perist. simplex, margine columellari reflexiusculo. (Q.) — Diam. maj. 24, min. 19, alt. 15 mill. (ex ic.)

Helix jervisensis Quoy et Gaim. Astrol. II. p. 126. t. 10. f. 18 — 24.

— — — *Lam.* ed. Dh. 192. p. 120.

— *sutilosa* (Helicella) Fér. pr. 263?

Bradybaena sutilosa Beck ind. p. 18?

Habitat ad sinum Jervis Novae Hollandiae.

185. *H. Novae Hiberniae* Quoy.

T. perforata, globoso-depressa, carinata, oblique ruguloso-striata, tenuis, fulvescens, ad carinam linea rufa cineta; anfr. 6 vix convexiusculi, ultimus basi convexior, sublaevigatus, lineis concentricis obsolete decussatus; apertura lunaris, intus nitida, concolor; perist. rectum, obtusum, margine columellari subincrassato. — R. a. = 3 : 4. — Diam. maj. 49, min. 47, alt. 40 mill. (Coll. Nr. 406.)

Helix Novae Hiberniae Quoy et Gaim. Astrol. II. p. 124. t. 10.

f. 44 — 47.

— — — *Lam.* ed. Dh. 193. p. 120.

— — — *Chemn.* ed. II. *Helix* N. 548. t. 88. f. 1. 2.

Nanina Novae Hiberniae Beck ind. p. 4.

β. Basi fulvo-lutescens, superne rufescens: diam. maj. 21, min. 18½, alt. 12 mill. (Mus. Cuming.)

Habitat ad portum Carteret Novae Hiberniae.

186. **H. anceps (Caracolla) Gould.**

T. vix perforata, lenticularis, pallide cornea, acute carinata, supra striata, subtus nitida; anfr. 6 vix convexiusculi, ultimus basi convexior, laevigatus, infra carinam compressam, breviter prominentem lineis nonnullis impressis, concentricis notatus; apertura angulato-lunaris; perist. simplex, tenue, margine columellari vix reflexiusculo. — Diam. maj. 17, min. 16, alt. 9 mill. (Coll. Nr. 107.)

Caracolla anceps Gould in Bost. journ. IV. 4. p. 454. t. 24. f. 4.

Helix anceps Chemn. ed. II. Helix N. 551. t. 88. f. 8—10.

Habitat prope Tavoy imperii birmani.

187. **H. indica Pfr.**

T. perforata, orbiculato-convexa, solidiuscula, superne confertim costulato-striata, lineis impressis confertis granulato-decussata, unicolor fulva; anfr. 5½ planiusculi, ultimus basi convexior, laevigatus, infra carinam lineis nonnullis impressis, concentricis notatus; apertura angulato-lunaris; perist. rectum, album, margine columellari subincrassato, superne breviter reflexo. — Diam. maj. 22, min. 19, alt. 11 mill. (Mus. Cuming.)

Helix indica Pfr. Symb. III. p. 66.

Habitat in montibus Nilagiricis Indiae orientalis (Perrottet).

188. **H. biangulata Pfr.**

T. subperforata, scalaeformis, tenuis, corneo-rubella, leviter striata, nitidiuscula; anfr. 7 lente accrescentes, ultimus bicarinatus: carina inferiore filari ad peripheriam, superiore per omnes anfractus ascendente; apertura lunato-ovalis; perist. simplex, acutum, perforationem angustissimam fere occultans. — Diam. maj. 15, min. 13½, alt. 9 mill. (Coll. Nr. 108.)

Helix biangulata Pfr. in Phil. Icon. I. 7. p. 155. t. 5. f. 42.

— — *Pfr.* in Proc. Zool. Soc. 1845. p. 40.

— — *Chemn.* ed. II. Helix N. 550. t. 88. f. 6. 7.

Habitat in provincia Cagayan insulae Luzon (Cuming).

— 189. **H. ochroleuca Férussac.**

T. subperforata, globuloso-depressa, leviter striata, albida, superne ochraceo variegata et cingulis aurantiis varie ornata; spira brevis, obtusa; sutura linearis; anfr. 7 plani, ultimus medio

carinatus; columella brevissima, verticalis; apertura lata, lunaris; perist. simplex, margine columellari reflexiusculo, perforationem fere tegente. — Diam. maj. 17, min. $15\frac{1}{2}$, alt. 10 mill. (Coll. Nr. 409.)

Helix ochroleuca (Helicostyla) Fér. pr. 308.

— ochracea Fér. hist. t. 30. f. 1.

— albella Chemn. IX. P. 2. p. 87. t. 126. f. 1106.

Habitat in insula Bermuda (Menke).

190. *H. Jenynsi* Pfr.

T. subperforata, turbiniiformis, striatula, tenuis, nitida, carinata, lactea, supra carinam fusco-unifasciata; spira brevis, conica, acuta; anfr. $5\frac{1}{2}$ vix convexiusculi, ultimus basi convexior; apertura angulato-lunaris; perist. simplex, acutum, margine columellari superne reflexiusculo, perforationem fere claudente. — Diam. maj. 12, min. 11, alt. $7\frac{1}{2}$ mill. (Mus. Cuming.)

Helix Jenynsi Pfr. in Proc. Zool. Soc. 1845. p. 131.

— — Phil. Icon. II. 11. p. 86. t. 7. f. 8.

Habitat . . . ?

O bs. Specimina 2 vidi prorsus aequalia, an adulta?

191. *H. Zelandiae* (Carocolla) Gray.

T. perforata, depressa, turbiniiformis, pallide cornea, pellucida, maculis rufis variegata, minute striatula; spira convexa; anfr. 5 planulati, ultimus carinatus, convexus; umbilicus profundus; perist. simplex, acutum. — Diam. maj. $9\frac{1}{2}$, min. 9, alt. $5\frac{1}{2}$ mill. (Spec. Mus. Britt.)

Helix Zelandiae (Carocolla) Gray in Dieffenb. trav. I. p. 247.

— — Gray in Revue zool. 1844. p. 375.

Habitat in Nova Seelandia.

192. *H. Mariae* (Nanina) Gray.

T. subperforata, depressa, trochiformis, oblique confertim plicata, cornea, oblique et confertim strigato-flammulata; spira brevis, apice acutiuscula; anfr. 6 planiusculi, acute carinati, ultimus basi convexus; apertura lata, angulato-lunaris; perist. simplex, acutum, margine columellari brevissimo, subincrassato. — Diam. maj. $6\frac{1}{2}$, min. 6, alt. $3\frac{1}{2}$ mill. (Mus. Britt.)

Nanina Mariae Gray in Dieffenb. trav. I. p. 262.

Habitat in Nova Seelandia.

193. *H. filocincta* Pfr.

T. perforata, depressa, tenuis, pellucida, cornea, striatula, nitida; spira parum elevata, obtusa; anfr. $5\frac{1}{2}$ convexiusculi, carinati, ultimus basi convexus: carina filiformi, in anfractibus superioribus conspicua, sed non exserta; apertura verticalis, lunato-subauriformis; perist. simplex, rectum, margine columellari perobliquo, clongato, descendente, ad dextram subito ascendente. — Diam. maj. 41, min. 40, alt. $5\frac{1}{2}$ mill. (Coll. Nr. 410.)

Helix filocincta Pfr. in Proc. Zool. Soc. 1845. p. 124.

— — Chemn. ed. II. *Helix* N. 553. t. 88. f. 24—26.

Habitat prope Cagayan prov. Misamis ins. Mindanao (Cuming).

194. *H. atomata* (Carocolla) Menke.

T. orbiculato-convexiuscula, subtus convexa, perforata, striata, albida, fusco inquinata; anfractus infimus carinatus, supra ad carinam, reliqui ad suturam maculis inaequalibus, nigro-fuscis; apertura semiovato-subtetragona. — Alt. $4\frac{1}{3}$, lat. $2\frac{1}{2}$ lin. (Mke.)

Carocolla atomata Mke synops. p. 76. ed. 2. p. 128.

Helix cheiranthicola Lowe? (Beck.)

Habitat . . . ?

Obs. Hoc loco forsan inserenda *H. cristula* Fér. voy. de Freycinet, imperfecte descripta, nec figurata. (Conf. Nr. 4104.)

* * *

195. *H. viridis* (Vitrina) Quoy. †

T. solida, discoidea, valde carinata, desuper convexa, infra globosa, viridis, fascia lutea cincta; anfr. $4\frac{1}{2}$ planiusculi; apertura ampla, triangularis; perist. simplex, acutum; rima umbilicalis vix distincta. — Diam. 9, alt. 6 lin. (Quoy.)

Vitrina viridis Quoy et Gaim. Astrol. II. p. 438. t. 44. f. 46—48.
(c. anim.)

— — Lam. ed. Dh. VII. p. 730. N. 7.

Nanina viridis Beck ind. p. 4.

Habitat in montibus Manado insulae Celebes.

Obs. 4. Animal Naniuae, nec Vitrinae!

Obs. 2. Nomen in systemate retineri potest (acque ac *H. viridis* Dh.) cum generi Naninae species ascribenda sit. — Dubium tamen remanet, nonne specimina a Cl. Quoy descripta referenda sint ad *H. reginae* varietatem vel individua minus adulta, cui opinioni obstat «testa solida» et anfractuum numerus (in *H. reginae* adulta 4).

— 196. *H. excentrica* Pfr.

T. subperforata, superne planiuscula, basi inflata, tenuis, cerca, nitida, striis excentricis subcostulata, acute carinata; anfr.

4 supra plani, rapide accrescentes; apertura securiformis; perist. simplex, acutum, ad perforationem angustissimam dilatato-reflexum. — Diam. maj. 18, min. 15, alt. $8\frac{1}{2}$ mill. (Coll. Nr. 111.)

Helix excentrica Pfr. in Proc. Zool. Soc. 1845. p. 41.

— — Chemn. ed. II. Helix N. 552. t. 88. f. 14—16.

Habitat in insula Siquijor Philippinarum (Cuming).

Obs. Specimina permulta vidi omnino conformia, quare dubitare non possum, descripta esse adulta et perfecta.

197. *H. variolosa* Pfr.

T. perforata, depressa, acute carinata, solidula, opaca, lutescens, superne confertissime plicata, lineisque concentricis regulariter decussata, pustulis albis subfasciatim obsita; spira planiuscula; anfr. $3\frac{1}{2}$ vix convexiusculi, rapide accrescentes, ultimus basi convexus, infra carinam impressus; columella brevis, verticalis; apertura late securiformis; perist. simplex, acutum, margine columellari breviter reflexo, perforationem fere occultante. — Diam. maj. 23, min. 20, alt. 10 mill. (Mus. Cuming.)

Helix variolosa Pfr. in Proc. Zool. Soc. 1845. p. 128.

Habitat . . . ?

Obs. Specimina plura vidi plane conformia. An adulta?

Hel. Loveni. Krauss. F. 2. f. 21. 2a. 1848. p. 93.
Africa merid.

§. 17.

198. *H. helvacea* Philippi.

T. umbilicata, globosa, tenuis, rugoso-plicata, lineis concentricis obsolete decussata, epidermide olivaceo-fusca induta; spira concidea; anfr. 6 convexi, ultimus ventrosus, antice non descendens; apertura lunato-subcircularis; perist. simplex, acutum, rectum, margine columellari dilatato, fornicatim reflexo, umbilicum angustum, pervium semioccultante. — Diam. maj. 29, min. 24, alt. 21 mill. (Coll. Nr. 112.)

Helix helvacea Phil. Icon. II. 9. p. 1. Helix t. 6. f. 2.

— — Chemn. ed. II. Helix N. 547. t. 87. f. 25. 26.

β. Fascia 1 alba, latiuscula ad suturam.

Habitat in China (Largilliert).

Obs. Conf. II. ravida (Nr. 69) et tranquebarica (Nr. 67).

199. *H. subgranosa* Le Guillou. †

T. subglobosa, umbilicata, tenuis, pellucida, dilute rufo-spideae, subtus albido-fuscescens, longitudinaliter et transversim tenuiter striata, fere granulata; anfr. 4 convexo-depressi; labrum

acutum, prope umbilicum angulatum; labium rectum, super umbilicum latum, profundum reflexum. — Diam. 28, alt. 23 mill. (G.)

Helix subgranosa Le Guillou in Revue zool. 1842. p. 137.

Habitat in Australia septentrionali.

200. *H. Knysnaensis* Pfr.

T. umbilicata, globosa, solidiuscula, costulato-striata, sericina, corneo-olivacea; spira brevis, obtusa; anfr. 4 convexiusculi, ultimus inflatus, basi sublaevigatus, nitidissimus; umbilicus angustus, pervius; apertura rotundato-lunaris, intus margaritacea; perist. simplex, acutum, margine columellari superne dilatato, patente. — Diam. maj. 24, min. 20, alt. 46 mill. (Mus. Cuming.)

Helix Knysnaensis Pfr. in Proc. Zool. Soc. 1845. p. 131.

— — *Phil.* Icon. II. 11. p. 85. t. 7, f. 5.

Habitat prope Knysna in promontorio bonae spei.

201. *H. inornata* Say. †

T. anguste et profunde umbilicata, subglobosa, pallide luteo-cornea, glabra; anfr. 3 convexi; sutura mediocris; apertura ampla; labrum simplex, marginibus approximatis. — Diam. vix $\frac{7}{10}$ poll. (Say.)

Helix inornata Say in Philad. journ. II. p. 374.

Habitat in Pennsylvania.

Obs. Specimina hoc nomine ex America missa descriptioni non congruunt, sed ad *H. laevigatam* Fér. (Nr. 142) referenda sunt. Cl. Beck *H. inornatam* dubitanter sub *H. fuliginosa* Griff. laudat.

202. *H. Orbignyi* Webb et Berthelot. †

T. globulosa, tenuis, alba, umbilicata, irregulariter striata; spira elevata, conica, apice obtusa; anfr. 4 convexi; apertura rotunda; labrum tenue, acutum. — Diam. 7, alt. 6 mill. (W. et B.)

Helix Orbignyi Webb et Berth. canar. p. 59. t. 2. f. 31—33.

Habitat prope Santa Cruz de Teneriffa.

202*. *H. saxatilis* Couthouy. †

T. parva, subglobosa, lucida, viridis, infra convexa, umbilico modico perforata, leviter striata; spirae anfr. 4 cylindrici, cito crescentes; sutura canaliculata; apertura suborbicularis, ampla; labrum simplex, fere continuum. — Alt. $\frac{1}{10}$, lat. $\frac{1}{4}$ poll. (G.)

Helix saxatilis Couth. mss. Gould 1846. Exped. shells p. 49.

Habitat in Terra Ignea (Tierra del Fuego).

Obs. «In universum similis *H. lucidae*, forma globulosa et colore laete viridi insignis.»

§. 18 *).

203. **H. Monrovia Rang.**

T. umbilicata, turbinata, tenuiuscula, albida; strigis virentibus irregulariter ornata, superne regulariter et confertim striata; spira elevata, obtusiuscula; anfr. $5\frac{1}{2}$ convexiusculi, ultimus subtus laevigatus, nitidus, subplanulatus; columella subverticalis, stritiuscula; apertura subtetragona, intus alba; perist. simplex, acutum, margine columellari dilatato, reflexo, umbilicum mediocrem, pervium partim occultante. — Diam. maj. 20, min. 18, alt. 14—15 mill. (Mus. Cuming.)

Helix Monrovia Rang in Ann. d. sc. nat. XXIV. p. 16. t. 3. f. 3.

— — *Pfr.* in Phil. Icon. II. 11. p. 85. t. 7. f. 9.

Habitat in Africa: Liberia.

204. **H. tiara Mighels. †**

T. depresso turbinata, flavida, strigis fulguratis, saturate brunneis ornata; umbilicus latus et profundus; striae incrementi rudiusculae; anfr. 5—6 convexi; apertura lunato-circularis; labrum simplex, tenue. — Diam. circa $\frac{1}{2}$ " (M.)

Helix tiara Mighels in Bost. Proc. 1845. p. 19.

Habitat in insula Sandwich. Kauai.

204^a. **H. tumulus Gould. †**

T. parva, solida, flavida, orbiculato-pyramidata, basi subplanulata, umbilico modico perforata; spira elevata, conico-rotundata; anfr. 6—7 convexiusculi, striis perobliquis exarati, ultimus obtuse ad peripheriam angulatus, prope aperturam compressus; apertura parva, transversa, lunata; perist. simplex. — Long. $\frac{2}{5}$, alt. $\frac{7}{20}$ poll. (G.)

Helix tumulus Gould 1846. Exped. shells p. 22.

Habitat in insulis Feejee.

Obs. «Persimilis *H. pyramidatae*, sed minus elevata et apice magis rotundata.»

205. **H. Paraguayana Pfr. †**

T. orbiculata, umbilicata, laevigata, tenuis, diaphana, succinea; spira elevata, apice obtusa; anfr. 6; apertura rotunda, semilunaris; labrum tenue, acutum. — Diam. 5, alt. 3 mill. (O.)

Helix Paraguayana Pfr. Symb. II. p. 93.

— *elevata* Orb. synops. p. 6. Nec Say.

— — Orb. voy. p. 254. t. 28. f. 5—8.

Habitat in Paraguay, Montevideo.

*) Numi forsán H. Foulloyi (Nr. 75.) huic sectioni ascribenda?

— 206. **H. Boothiana Pfr.**

T. anguste umbilicata, conoideo-globosa, hyalina, minutissime striata; anfr. 5 convexi; apertura lunato-ovalis; perist. simplex, acutum, subpatulum, ad umbilicum subreflexum. — Diam. maj. $5\frac{2}{3}$, min. 5, alt. $3\frac{1}{2}$ mill. (Coll. Nr. 443. Spec. max.)

Helix Boothiana Pfr. in Wieg. Arch. 1839. I. p. 351.

— — *Chemn.* ed. II. *Helix* N. 528. t. 85. f. 13—15.

— *Lavalleana Orb.* cub. I. p. 161. t. 8. f. 16—19.

β. Major: diam. maj. 8, min. $7\frac{1}{2}$, alt. 5 mill. (Spec.)

Helix vitrina Adams in sched.

Habitat in insula Cuba, ubi frequentem legi circa Matanzas, var. in Jamaica.

207. **H. pleurophora Moricand. †**

T. parvula, globoso-conica, umbilicata, perforata; anfr. 5 rotundi transverse et eleganter striis elevatis costulati, grisei, concolores vel fulvo maculati; apertura subrotunda vel oblonga; perist. acutum. — Diam. 3, alt. 3 mill. (M.)

Helix pleurophora Moric. Mém. 3^e suppl. p. 56. t. 5. f. 6—9.

Habitat in provincia Bahiensi Brasiliae.

208. **H. bullula Hutton. †**

T. parvula, glabra, translucens, subtrochiformis, conoidea; anfr. 5 convexi, ultimus rotundatus; sutura impressa; umbilicus angustatus; apertura latior; labrum simplex. — Diam. 0,45 poll. (Bens.)

Helix bullula Hutt. in Journ. As. Soc. VII. P. I. p. 248.

Habitat in Himalaya, prope Simla.

— 209. **H. umbilicata Montagu.**

T. umbilicata, depresso-turbinata, minute striata, sericina, fusco-cornea; anfr. 5 convexi, ultimus antice non descendens; umbilicus mediocris, pervius; apertura rotundata; perist. simplex, acutum, rectum. — Diam. maj. $3\frac{1}{4}$, min. 3, alt. $2\frac{1}{3}$ mill. (Coll. Nr. 444.)

Helix umbilicata Montagu test. britt. p. 434. t. 13. f. 2.

— — *Chemn.* ed. II. *Helix* N. 566. t. 89. f. 32—35.

— *umbilicata* var. Chemn. ed. II. Helix t. 89. f. 40—43.

Euryomphala rupestris Beck ind. p. 9.

Delomphalus rupestris Hartm. Gast. I. p. 120. t. 37. f. 4—3.

Habitat in rupibus calcareis Bavariac, Salisburgiac, Illyriac, Helvetiae, Italiae, Angliac, var. β in Gallia, Illyria, Helvetiae parte occidentali, Lusitania.

210. *H. Assarinensis* Calcare. †

T. orbiculato-subconoidea, umbilicata, fulvo-castanea, albo maculata; anfr. 5 plane convexi, longitudinaliter oblique striati, 2 supremi glabri; apertura rotundato-depressa; labrum simplex. — Diam. 3 lin. (G.)

Helix Assarinensis Calc. in Revue zool. 1845. p. 281.

Habitat in Sicilia, ubi unicum specimen vivum repertum est prope Asaro.

Obs. «Affinis *H. rupestri* Drap.»

211. *H. saxicola* Pfr.

T. anguste umbilicata, orbiculato-convexa, tenuis, diaphana, nitida, minutissime striata, corneo-fusca; anfr. $4\frac{1}{2}$ convexiusculi, sensim accrescentes; apertura subcircularis; perist. simplex, acutum, marginibus conniventibus. — Diam. maj. $3\frac{1}{2}$, min. 3, alt. $2\frac{1}{4}$ mill. (Coll. Nr. 115.)

Helix saxicola Pfr. in Wieg. Arch. 1840. I. p. 251.

— — Chemn. ed. II. Helix N. 567. t. 89. f. 36—39.

— *Mauriniana* Orb. cub. I. p. 162. t. 8. f. 20—23.

Habitat in insula Cuba, ubi raram legi circa Matanzas! La Carolina (Gould in Bost. journ. IV. p. 488).

212. *H. minutissima* Lea. †

T. subglobosa, supra obtuso-conoidea, subtus convexa, fusco-cornea, minutissime striata, umbilicata; spira brevis; sutura in-

pressa; anfr. 4 rotundi; apertura subrotunda; labrum acutum. — Diam. . . . ? (Lea.)

Helix minutissima Lea in Proc. Am. phil. Soc. 1841. II. p. 82.

Habitat in America boreali, prope Cincinnati.

Obs. Cl. Bronn in cat. conch. Heidelb. 1845 hanc speciem cum *H. minuscula* Binn. identicam declarat, sed utriusque descriptio non congruit. (Conf. Nr. 294.)

Hel. microscopica Krauss. J. u. f. 20. 4. 1848. p. 93. Afr. merid.

§. 49.

— 213. *H. olivetorum* Gmelin.

T. aperte umbilicata, globoso-depressa, nitida, glabriuscula, supra corneo-rufa, subtus virenti-albida; anfr. $5\frac{1}{2}$ planiusculi, ultimus antice non descens; apertura lunato-rotundata; perist. simplex, acutum, rectum, margine columellari vix reflexiusculo. — Diam. maj. 24, min. $17\frac{1}{2}$, alt. 12 mill. (Coll. Nr. 116.)

Helix olivetorum Gmel. p. 3639. N. 170. (Gualt. t. 3. f. 9.)

Mesomphix olivetorum Beck ind. p. 8.

β . Major, anfr. 6, apertura lunato-ovali: diam. maj. 31, min. 26, alt. 17 mill. (Spec. coll. Philippian.)

Helix Leopoldina Charp. (teste Sturm.)

— *olivetorum* Rossm. VIII. t. 39 superne in med. (detrit.)

γ ? Umbilico angustiore, anfr. 7:

Helix filicum Kryn. Bull. Mosc. IX. p. 204. *)

Habitat in Gallia meridionali et Italia, var. β in Liguria, var. γ ? in Georgia et Tauria.

— 214. *H. fuliginosa* Griffith.

T. anguste umbilicata, depressa, tenuis, striatula, nitida, olivaceo-cornea; spira vix elevata; anfr. $4\frac{1}{2}$ planiusculi, rapide accrescentes, ultimus magnus, subdepressus; apertura perobli-

*) T. orbiculato-convexuscula, depressa, inferne planulata, tenui, pellucida, nitida, transversim irregulariter striolata, supra fusciscenti-cornea, subtus albida; anfr. 7 oblique planulatis, ultimo ad aperturam dilatato; spira parum exserta; sutura impressa, subduplicata; umbilico mediocri, in fundo dilatato; apertura elevato-lunata, subobliqua; perist. simplici. — Diam. 10, alt. 4 mill. — A vera *H. incerta* Dr. umbilico minus dilatato cum anfraetibus in eo ocellis etc. plane videtur diversa. (Kryn. l. c.)

qua, ampla, lunato-ovalis; perist. simplex, acutum, margine umbilicari reflexiusculo. — Diam. maj. $26\frac{1}{2}$, min. $22\frac{1}{2}$, alt. 13 mill. (Coll. Nr. 117. Spec. Griffithian.)

Helix fuliginosa Griff. mss. Binn. in Bost. journ. III. p. 417. t. 24.

— — Chemn. ed. II. Helix N. 519. t. 84. f. 1—3.

— *capillacea* Pfr. Symb. II. p. 24. Nec Fér.

Habitat in Pennsylvania, Ohio.

215. *H. caduca* Pfr.

T. umbilicata, depressa, fragilis, leviter striatula, albida, epidermide fulvo-cornea induta; spira parum elevata, vertice subtili; anfr. $5\frac{1}{2}$ convexiusculi, ultimus multo latior, basi subplanulatus, circa umbilicum angustum, externe subinfundibuliformem excavatus; apertura majuscula, oblique truncato-ovalis; perist. simplex, tenue, marginibus subconniventibus, callo tenuissimo junctis, columellari vix expansiusculo. — Diam. maj. 27, min. 22, alt. 14 mill. (Coll. Nr. 118.)

Helix caduca Pfr. in Zeitschr. f. Mal. 1846. p. 158.

— — Chemn. ed. II. Helix N. 513. t. 83. f. 26—28.

Habitat in republica mexicana (Liebmann).

216. *H. Griffithi* Pfr.

T. umbilicata, globoso-depressa, solidiuscula, laevigata, superne leviter striatula, corneo-lutescens; spira breviter elevata, conoidea; anfr. 6 convexiusculi, ultimus ad suturam castaneo-margineatus, ventrosus; umbilicus medioeris, pervius; apertura vix obliqua, ampla, rotundato-lunaris, intus margaritacea; perist. simplex, acutum, marginibus callo tenuissimo junctis, columellari breviter patente. — Diam. maj. 26, min. 21, alt. 14 mill. (Mus. Cuming.)

Helix Griffithi Pfr. in Proc. Zool. Soc. 1845. p. 127.

Habitat . . . ?

217. *H. vitrinoides* Potiez et Michaud. †

T. umbilicata, orbiculato-subdepressa, apice obtusa, diaphana, nitida, laevis, fragilis, pallide cornea; anfr. 7 subplani, ultimus subearinatus, infusa facie convexus, laevissimus; apertura compressa; perist. simplex, acutum. — Axis 20, diam. maj. 30 mill. (P. et M.)

Helix vitrinoides Pot. et Mich. gal. de Douai I. p. 118.

Habitat . . . ?

— 218. **H. protensa Férussac. †**

T. umbilicata, depressa, striata, diaphane flava; spira vix elevata; anfr. $4\frac{1}{2}$ planiusculi, celeriter accrescentes; umbilicus mediocris, pervius; apertura magna, lunato-ovalis, subtus dilatata; perist. simplex, acutum, margine columellari subarcuato, declivi, late reflexo. — Diam. maj. 20, min. 17, alt. 8—9 mill. (ex ic.)

Helix protensa (Helicella) Fér. pr. 207. Hist. t. 82. f. 3.

— — Chemn. ed. II. Helix N. 506. t. 83. f. 4—6.

Habitat in Syria, Standié (Olivier, Fér.).

— 219. **H. capillacea Férussac. †**

T. umbilicata, depressa, striatula, cornco-lutescens; spira vix elevata; anfr. 4 celeriter accrescentes, vix convexi, ultimus vix descendens, basi convexior; umbilicus mediocris, pervius; apertura lunato-ovalis; perist. simplex, acutum, margine columellari subarcuato, reflexiusculo. — Diam. maj. 24, min. 18, alt. 10 mill. (ex ic.)

Helix capillacea (Helicella) Fér. pr. 206. Hist. t. 82. f. 5.

— — Chemn. ed. II. Helix N. 507. t. 83. f. 7—9.

Habitat ad Port-Jackson. (Fér.)

220. **H. chalicophila Orbigny. †**

T. orbiculata, umbilicata, tenuis, substriata, diaphana, grisco-cornea; spira obtusa; anfr. 6; apertura rotunda; labrum tenue. — Diam. 49, alt. $4\frac{1}{2}$ mill. (O.)

Helix chalicophila (Helicella) Orb. synops. p. 6.

— — Orb. voy. p. 254. t. 27. f. 8—11.

Habitat in provincia Chiquitensi Boliviae.

221. **H. skiaphila Orbigny. †**

T. orbiculata, convexa, umbilicata, tenuis, sublaevigata, diaphana, albida; spira obtusa; anfr. 6; apertura rotundata; labrum tenue. — Diam. 42, alt. 5 mill. (O.)

Helix skiaphila (Helicella) Orb. synops. p. 5.

— — Orb. voy. p. 249. t. 27. f. 4—7.

Circinaria skiaphila Beck ind. p. 23.

Habitat prope Cochabamba Boliviae.

Obs. «H. omalomorphae affinissima.» (O.)

— 222. **H. alliaria Miller.**

T. anguste umbilicata, convexo-depressa, polita, nitidissima, diaphana, superne fulva, subtus albida; anfr. 5 vix convexiusculi.

regulariter accrescentes; apertura depressa, oblique lunaris; perist. rectum, acutum, simplex. — Diam. maj. 15, min. 13, alt. 7 mill. (Coll. Nr. 449.)

Helix alliaria Mill. Ann. Phil. n. s. VII. p. 379.

— — Chemn. ed. II. Helix N. 508. t. 83. f. 10—12.

— *alliacea* Jeffr. Linn. transact. XIII. p. 344. 544.

— *glabra* Stud. Fér. pr. 245.

— — Rossm. VIII. p. 36. f. 528.

— *nitens* Shepp. Linn. transact. XVI. p. 460.

— — var. *tenera* Faure-Big. (Rossm.)

— *foetida* Stark elem. of nat. hist. II. p. 59.

— — Brown Brit. shells t. 40. f. 48—52.

Helicella glabra Beck ind. p. 6.

Polita glabra Held in Isis 1837. p. 946.

Zonites alliarius Gray Manual p. 468. t. 4. f. 39.

β. Foramine punctiformi: H. nitidissima Parr. in sched.

Habitat in Germania, Helvetia, Britannia etc., var. β in Hungaria.

223. H. bilineata Pfr.

T. umbilicata, depressa, tenuis, nitida, pellucida, laevigata, lutescenti-cornea; spira planiuscula; sutura striolata; anfr. 5 vix convexiusculi, regulariter accrescentes, ultimus subdepressus, lineis 2 castaneis, altera supra peripheriam, altera suturali, ad apicem usque conspicua, ornatus; umbilicus angustus; apertura oblique lunaris; perist. simplex, acutum, margine columellari brevissime reflexo. — Diam. maj. 15, min. 12, alt. 7 mill. (Coll. Nr. 120.)

Helix bilineata Pfr. in Proc. Zool. Soc. 1845. p. 128.

— — Chemn. ed. II. Helix N. 509. t. 83. f. 23—25.

Habitat . . . ?

Obs. Persimilis praecedenti. Differt anfractibus celerius crescentibus, sutura striolata, etc.

224. H. Balmei Potiez et Michaud. †

T. orbiculata, convexiuscula, striata, umbilicata, tenuis, corneo-fulva, subtus lactescens, striis longitudinaliter regulariter dispositis; anfr. 6 convexi; sutura impressa; apertura ovalis, compressa; labrum simplex, acutum; apex obtusus. — Axis 7—8, diam. 12—14 mill. (P. et M.)

Helix Balmei Pot. et Mich. gal. de Douai I. p. 120.

Habitat in Sicilia.

Obs. 1. «Differt ab H. cellaria striis superficiem tegentibus et habitu.»

Obs. 2. Cl. Beck speciem generi Circinariæ ascribit (p. 24) et H. convexam Fér. t. 82 f. 4 citat. (Conf. Nr. 260.)

225. H. peregrina Aradas et Maggiore. †

T. subdepressa, umbilicata, cornea, subdiaphana, longitudinaliter oblique ac eleganter striata; anfr. 5—6 rotundati, sutura profunda divisi; apertura oblique subovata; labrum simplex. — Alt. 2, diam. $3\frac{1}{2}$ lin. (A. et M.)

Helix peregrina Arad. et Magg. cat. rag. p. 79.

Habitat in Sicilia.

Obs. «Affinis H. cellariae, sed absque nitore, tenuior, longitudinaliter striata.»

226. H. diaphanella Krynicki. †

T. orbiculato-convexiuscula, depressa, inferne planulata, tenuis, diaphana, nitida, glabra, griseo-albida aut flavescens; anfr. 7 planulati, ultimus attenuatus; sutura impressiuscula, subduplicata; spira vix exserta; umbilicus apertus, angustatus, profundus; apertura compresso-lunata; perist. simplex. — Alt. $4\frac{1}{2}$, diam. $3\frac{1}{2}$ lin. (Kr.)

Helix diaphanella Kryn. Bull. Mosc. IX. p. 204.

— *diaphana Kryn. Bull. Mosc. VI. p. 436. Nec Lam.*

— *multispira Pfr. Symb. III. p. 16.*

Habitat in Tauria.

Obs. 1. «Ab H. cellaria, cui similis, anfractuum numero, quorum ultimus non dilatatus, aperturae forma etc. facile distinguenda.» (Kr.)

Obs. 2. Villa (disp. syst. p. 17.) H. diaphanellam Kryn. synonymam H. hydatinae Rossm. habet, sed characteres valde differre videntur. (Conf. Nr. 124.)

227. H. Testae Philippi.

T. umbilicata, orbiculato-convexiuscula, minutim striata, nitida, glabra, superne cornea, basi pallidior; spira subelevata; anfr. 6 planiusculi, lente accrescentes, ultimus basi planulatus; umbilicus mediocris, pervius; apertura subtriangulari-lunaris; perist. simplex, acutum, margine supero antrorsum arcuato. — Diam. maj. 10, min. 9, alt. $4\frac{1}{2}$ mill. (Coll. Nr. 121.)

Polita lucida Held in Isis 1837. p. 916.

Zonites lucidus Gray Man. p. 174. t. 4. f. 38.

Habitat in Germania, Helvetia, Gallia, Britannia, Suecia, Finnia, Rossia.

232. *H. simplicula* Morelet. †

T. parvula, lenticularis, subprominula, valde umbilicata, tenuissime striata, pallide cornea; anfr. 5, ultimus subangulatus, subtus convexiusculus; apertura depressa; perist. simplex. — Amplit. 6 mill. (Mor.) — Diam. maj. 6, min. 5 mill. (ex ic.)

Helix simplicula Mor. moll. du Port. p. 56. t. 6. f. 2.

Habitat in Lusitania, inter Mertola et Castro Verde.

233. *H. Jacksoniensis* Gray. †

T. depressa, pallide brunnea, polita, concentric substriata; spira convexa; anfr. plani, ultimus rotundatus, depressus; apertura lunata; faux albida; labium externum tenue. — Axis 3, diam. $3\frac{1}{2}$ lin. (Gr.)

Helix Jacksoniensis Gray in Proc. Zool. Soc. 1834. p. 65.

— — Müll. synops. p. 7.

Habitat prope Port Jackson Novae Hollandiae.

Obs. « Similis *H. nitidae* O. F. Müll. » (Gray.)

234. **H. arborea Say.**

T. umbilicata, depressa, nitidula, striatula, virenti- vel fulvescenti-cornea; spira convexa, parum elata; anfr. 4 — $4\frac{1}{2}$ convexiusculi, ultimus vix depressus; umbilicus angustus, pervius; apertura lunato-circularis; perist. simplex, acutum. — Diam. maj. 5, min. $4\frac{1}{3}$, alt. $2\frac{3}{4}$ mill. (Coll. Nr. 125.)

Helix arborea Say Amer. Enc. t. 4. f. 4.

— *nitidula* β Fér.?

— *Ottonis* Pfr. in Wieg. Arch. 1840. I. p. 251.

Habitat in America boreali: Ohio, Massachusetts; nec non in insula Cuba!

Obs. Comparata speciminum copia H. Ottonis ab arborea specificè separandam non esse cognovi.

235. **H. nitensoidea Orbigny. †**

T. orbiculato-depressa, umbilicata, tenuis, pellucida, succinea, lucida; spira convexiuscula; anfr. 5 minime distincti; apertura semilunaris. — Diam. 9, alt. 5 mill. (O.)

Helix nitensoidea Orb. cub. I. p. 161. t. 10. f. 9—12.

Habitat in insula Cuba.

Obs. An varietas præcedentis?

236. **H. vortex Pfr.**

T. anguste umbilicata, convexo-discoidea, hyalina; anfr. $5\frac{1}{2}$ convexiusculi, angusti, obsolete striati, ultimus subangulatus, plerumque deorsum deviat; apertura lata, lunaris; perist. simplex, acutum, margine columellari reflexiusculo. — Diam. maj. 6, min. $5\frac{1}{2}$, alt. $2\frac{3}{4}$ — $3\frac{1}{2}$ mill. (Coll. Nr. 126.)

Helix vortex Pfr. in Wieg. Arch. 1839. I. p. 351.

— — Chemn. ed. II. Helix N. 526. t. 85. f. 7—9.

Habitat in provincia Caimanensi insulae Cuba! In insula St. Croix Indiae occidentalis (Mus. Cuming.).

237. **H. peraffinis Adams.**

T. umbilicata, depressa, striatula, hyalina; spira brevissima, obtusa; anfr. 6 convexi, ultimus rotundatus, basi planiusculus; umbilicus mediocris; apertura subverticalis, triangulato-lunaris; perist. simplex, acutum, margine dextro subverticali, columellari

brevissime reflexo, basali strictiusculo. — Diam. maj. 8, min. $7\frac{1}{2}$, alt. $4\frac{1}{2}$ mill. (Coll. Nr. 127.)

Helix peraffinis Ad. in Bost. Proc. 1843. p. 16.

— — *Pfr.* Symb. III. p. 67.

Habitat in insula Jamaica.

Obs. Characteribus medium tenet inter *H. Boothianam* et *vorticem*.

238. *H. pellucida* Adams. †

T. parva, pallide cornea, diaphana, exilissime et creberrime striata; spira late conica; anfr. 6 perconvexi, ultimus magnus, rotundatus; apertura suborbicularis, ab anfr. penultima valde invasa; labrum tenuissimum; umbilicus parvus. — Div. 110° . Alt. 0,2, lat. max. 0,28, lat. min. 0,25 poll. (Ad.)

Helix pellucida Adams in Boston Proc. 1843. p. 16.

Habitat in insula Jamaica.

Obs. Cl. auctor speciem praecedentem varietatem « spira depressa, convexa, umbilico multo latiore » forsau esse putat.

239. *H. pura* Alder.

T. umbilicata, depressa, concolor, cornea, pellucida, nitida, striatula; spira subplanata; anfr. 4 vix convexusculi, celeriter accrescentes, ultimus depressus; umbilicus mediocris, pervius; apertura perobliqua, lunato-rotundata; perist. simplex, acutum. — Diam. maj. $4\frac{2}{3}$, min. 4, alt. 2 mill. (Coll. Nr. 128.)

Polita clara Held in Isis 1837. p. 916.

An *Helix vitrina* Fér. pr. 217?

Habitat frequens in Germania, Helvetia, Gallia, Britannia, Rossia, Volhynia etc., promiscue cum var. β et γ ; nec non in America boreali: Massachusetts (Gould).

Obs. Variat anfract. magis minusve convexis, umbilico latiore vel angustiore.

239^a. **H. pusillus Gould. †**

T. minuta, tenuis, depressa, supra oblique striata, albido-virens, infra viridior, subpolita, perforata; spirac anfr. 4 subplanulati; sutura profunda; apertura circularis; labrum simplex. — Long. $\frac{7}{40}$, lat. $\frac{3}{40}$ poll. (G.)

Helix pusillus Gould 1846. Exped. shells p. 19.

Habitat in insulis Sandwich., in montibus ins. Maui.

Obs. 1. «Vix distinguenda ab *H. electrina*, sed magis striata. Similis etiam *H. spirillo* (Cujusnam?), umbilico multo angustiore diversa.»

Obs. 2. Dimensiones erroneae esse videntur. — Nomen servari non potest.

240. **H. parvula Rang. †**

T. orbiculata, utrinque convexa, umbilicata, laevigata, lucida, diaphana, luteo-brunnea; anfr. 3 planiusculi; spira obtusa; apertura rotunda; labrum tenue. — Diam. 1, alt. $\frac{2}{3}$ mill. (R.)

Helix parvula Rang in Ann. d. sc. nat. XXIV. p. 14.

Habitat in Promontorio viridi Africac.

241. **H. pygmaea Draparnaud.**

T. aperte umbilicata, orbiculato-convexa, fuscula, minutissime striata, sericina; anfr. $3\frac{1}{2}$ subaequales, convexiusculi; apertura lunaris; perist. simplex, rectum, acutum. — Diam. maj. $1\frac{2}{3}$, min. $1\frac{1}{2}$, alt. $\frac{2}{3}$ mill. (Coll. Nr. 129. Spec. hass.)

Habitat in Anglia: Scarborough, et Hibernia (Thomps.).

244. *H. telonensis* Mittre. †

T. subdepressa aut convexiuscula, cornea, tenuis, pellucida, subtilissime striata; anfr. 5 convexi, ultimus major; apertura rotundata; perist. acutum, simplex; umbilicus magnus. — Diam. 4 lin. (M.)

Helix telonensis Mittre in Ann. d. sc. nat. XVIII. p. 188.

Habitat in Gallia meridionali, prope Toulon.

§. 20.

245. *H. lucubrata* Say.

T. aperte umbilicata, globoso-depressa, polita, rufescens, subdiaphana, subtus pallidior; spira convexa, valde depressa;

sutura mediocris; anfr. 4 corrugati; apertura suborbicularis; perist. simplex. — Diam. 4 poll. (Say.)

Helix lucubrata Say descr. of new terr. shells etc. p. 13.

Habitat in republica mexicana.

Obs. «Affinis *H. inornata*, umbilico multo latiore, apertura accuratius rotundata, colore saturatiore distincta.» (Say.)

246. *H. Zonites* Pfr.

T. umbilicata, depressa, tenuis, diaphana, confertim costulato-striata, lutescenti-cornea; spira vix elata; anfr. 6 convexiusculi, regulariter accrescentes, ultimus supra medium linea rufa, ad apicem usque conspicua ornatus, basi laevior, subplanulatus; umbilicus mediocris, pervius; apertura depressa, oblique lunato-ovalis, intus margaritacea; perist. simplex, rectum, margine columellari breviter patente. — Diam. maj. 25, min. 20, alt. 12½ mill. (Mus. Cuming.)

Helix Zonites Pfr. in Proc. Zool. Soc. 1845. p. 127.

Habitat ...?

247. *H. cypria* Pfr.

T. umbilicata, depressa, solidiuseula, superne costulato-striata, sericina, fulva, basi laevigata, pallidior; spira vix elevata, obtusissima; anfr. 5½ — 6 planiuseuli, lente accrescentes, ultimus antice non descendens, basi subplanulatus, eirea umbilicum mediocrem impressus; apertura obliqua, rotundato-lunaris; perist. simplex, acutum, margine columellari vix patente. — Diam. maj. 14, min. 12, alt. 6 mill. (Coll. Nr. 130.)

Helix cypria Pfr. in Zeitschr. f. Mal. 1847. p. 12.

— — Chemn. ed. II. *Helix* N. 505. t. 83. f. 1 — 3.

Habitat in insula Cypro. (Parreyss.)

Obs. Sub nomine *H. protensis* accepi, sed ab icone *H. protensae* Fér. longe differt.

Hel. venicosa Krauss. J. 47. 23. 26. 1848.
af. merid.

248. *H. orthostoma* Pfr.

T. umbilicata, depressa, superne confertim subarcuato-striata, tenuis, pellucida, pallide cornea; spira vix elevata, obtusa; anfr. 6 angusti, convexiuseuli, ultimus basi sublaevigatus; umbilicus majusculus, cylindraceus; apertura verticalis, oblique lunaris; perist. simplex, acutum, margine supero brevi, basali valde arcuato, columellari dilatato, sinuato. — Diam. maj. 10, min. 9, alt. 5 mill. (Coll. Nr. 131.)

Helix orthostoma Pfr. in Proc. Zool. Soc. 1845. p. 124.

— — Chemn. ed. II. *Helix* N. 514. t. 83. f. 29 — 31.

Habitat prope Dingle insulae Panay Philippinarum (Cuming).

249. **H. fragilis Pfr.**

T. umbilicata, subdepressa, tenuissima, laete cornea, oblique costata; anfr. 4 convexiusculi; apertura magna, subcircularis; perist. tenue, acutum, ad umbilicem subreflexum. — Diam. maj. $9\frac{2}{3}$, min. 8, alt. 6 mill. (Coll. Nr. 432. Spec. max.)

Helix fragilis Pfr. in Wiegman. Arch. 1839. I. p. 350.

— — *Phil. Icon.* I. 3. p. 51. t. 3. f. 40.

— — *Chemn.* ed. II. *Helix* N. 527. t. 85. f. 40—42.

Habitat in insula Cuba, ubi prope Matanzas minus frequentem legi; Retiro, Carolina et Mt. Vernon (Gould).

Obs. Nomen servari potest, cum in dispositione systematica *H. fragilis* Hutt. (Nr. 89.) in genere *Naninae* enumeranda sit.

250. **H. sincera Adams.**

T. umbilicata, depressa, tenuis, confertim costulata, cereo-albida; spira plana; anfr. 4 convexiusculi, ultimus teres; umbilicus latus, perspectivus; apertura subverticalis, lunato-circularis; perist. simplicissimum, rectum. — Diam. maj. $3\frac{1}{3}$, min. 3, alt. $4\frac{2}{3}$ mill. (Mus. Cuming).

Helix sincera Ad. in Bost. Proc. 1845. p. 46.

— — *Pfr. Symb.* III. p. 67.

Habitat in insula Jamaica.

250^a. **H. mutata Gould. †**

T. orbicularis, depressa, tenuis, cerina, infra rotundata; spirae anfr. 4 convexi, nitidi, juniores glabrati, majores supra crassi-striati, subangulati; sutura impressa; subtus glabra, sulcis radiantibus remotis radiatim divisa, umbilico modico perforata; apertura ampla, lunata, basi subangulata; labrum simplex. — Lat. $\frac{3}{10}$, alt. $\frac{3}{20}$ poll. (G.)

Helix mutata Gould 1846. Exped. shells p. 49.

Habitat prope Rio Janeiro Brasiliae.

Obs. «Haud dissimilis *H. alliariae*. Num forsan *H. insignis* Orb.?»

251. **H. radiella Pfr.**

T. umbilicata, depressa, sublenticularis, tenuis, utrinque confertim costulata, cornea, strigis erebris undatis, castaneis, ad peripheriam latioribus radiata; spira vix elevata; anfr. $5\frac{1}{2}$ convexiusculi, ultimus subangulatus, basi planiusculus; umbilicus mediocris, pervius; apertura subverticalis, lata, lunaris; perist. simplex, tenue. — Diam. maj. $4\frac{3}{4}$, min. $4\frac{1}{2}$, alt. $2\frac{1}{2}$ mill. (Coll. Nr. 433.)

Helix radiella Pfr. in Proc. Zool. Soc. 1845. p. 425.

Helix radiella Chemn. ed. II. *Helix* N. 561. t. 89. f. 12—15.

— . . . *Fér. hist.* t. 83. f. 3. 4.

Habitat in insula Opara (Cuming).

252. *H. costellata* Orbigny. †

T. orbiculato-convexa, umbilicata, tenuis, depressa, costata, fusca; spira obtusa; anfr. 5; apertura rotunda; labrum tenue, acutum. — Long. 3, alt. 2 mill. (O.)

Helix costellata (Helicella) Orb. synopsis. p. 5.

— — *Orb. voy.* p. 252. t. 26. f. 6—9.

— — *var. a Desh.* in *Fér. hist.* p. 19. exclus. fig.

Habitat Montevideo, republica Paraguayensi orientali (Orb.).

Obs. Hæc species a Cl. Deshayes cum *H. epidermia* Ant. (Nr. 302.) jungitur; differre autem videtur spira elevata, apertura minore, etc.

252¹. *H. lyrata* Couthouy. †

T. minuta, depressa, rufo-cornea, umbilicata; spirae anfr. 4 cylindrici, striis elevatis, confertis lyrati; sutura subcanaliculata; apertura circularis; labrum simplex. — Lat. $\frac{1}{5}$, alt. $\frac{1}{20}$ poll. (G.)

Helix lyrata Couth. mss. Gould 1846. *Exped. shells* p. 19.

Habitat in Terra Ignis.

Obs. «Num forte *H. costellata* Orb.?»

253. *H. pusilla* Lowe.

T. umbilicata, depressa, tenuis, rufescens, costulis distantibus, membranaceis superne instructa; spira vix elevata; sutura distincta, impressa; anfr. $3\frac{1}{2}$ convexiusculi, ultimus non descendens, basi laevigatus; umbilicus angustus, pervius; apertura subcircularis, vix lunata; perist. simplex, tenue, acutum. — Diam. maj. 2, min. $1\frac{3}{4}$, alt. 4 mill. (Coll. Nr. 134. Spec. Lowean.)

Helix pusilla Lowe Faun. Mader. p. 46. t. 5. f. 17. (auct.)

— — *Chemn. ed. II. Helix* N. 565. t. 89. f. 29—31.

Euryomphala pusilla Beck ind. p. 9.

Habitat in insulae Maderae sylvis.

* * *

254. *H. Kochi* Pfr.

T. umbilicata, globoso-depressa, solidula, oblique distincte striata, albida, fasciis pluribus rufis ad peripheriam ornata; spira parum elevata, obtusiuscula; anfr. 6 convexi, sensim accrescentes, ultimus subcylindraceus; umbilicus magnus, pervius; apertura lunato-circularis, intus concolor, nitida; perist. simplex, acutum, marginibus conniventibus, dextro antrorsum arcuato, colu-

mellari dilatato, patente. — Diam. maj. 30, min. 26, alt. 16 mill. (Mus. Cuming.)

Helix Kochi Pfr. in Proc. Zool. Soc. 1845. p. 127.

Habitat...?

255. *H. solitaria* Say.

T. late pervio-umbilicata, globoso-depressa, solidiuscula, diaphana, oblique confertim rugosa, lutescenti-cornea, brunneo 2—3 fasciata; anfr. 6 convexi; sutura profunda; apertura lunato-rotundata, intus nitide alba, fasciata; perist. simplex, acutum, margine columellari dilatato, subreflexo. — Diam. maj. 25, min. 22, alt. 15 mill. (Coll. Nr. 135.)

Helix solitaria Say in Philad. journ. II. p. 157.

— — Binn. in Bost. journ. III. p. 426. t. 23.

Lister t. 70. f. 69? (An potius *H. solitaria*?)

β? Carinata, junior? Fér. t. 79. f. 10.

Habitat in America boreali in ripis fluviorum Mississippi, Missouri et Ohio; Massachusetts (Gould).

Hol. Strangei H. 25. 1843. p. 91. — *australia*.

257. *H. discoidea* Lesson. †

T. discoidea, late umbilicata, fusco-rubra, fasciis albis minutissimis et regularibus ornata; anfr. angustissimi, ultimus

convexus; apertura ovalis, angusta; perist. subreflexum. — Diam. 12, alt. 5 lin. (L.)

Helix discoides Less. voy. de la Coq. p. 310.

Habitat in Nova Hibernia.

Obs. «Affinis H. solitariae.» (Less.) — Verosimiliter alio loco collocanda.

258. *H. papillata* Pfr.

T. umbilicata, depressa, subdiscoidea, solidiuseula, irregularitor striata, opaca, albida, spadiceo-nebulosa saturatiusque strigata et maculata; spira plana, apice papillatim prominente; anfr. 5 planiuseuli, ultimus descendens, depresso-rotundatus; umbilicus angustus, pervius; apertura obliqua, lunato-subcircularis; perist. simplex, acutum, margine columellari vix dilatato. — Diam. maj. 23, min. 20½, alt. 14 mill. (Mus. Cuming.)

Helix papillata Pfr. in Proc. Zool. Soc. 1845. p. 129.

Habitat . . . ?

Obs. Similis H. Menkeanae Nr. 112.

259. *H. sudensis* Pfr.

T. umbilicata, depressa, regulariter et confertim costulata, tenuis, diaphana, rubello-cornea; spira vix elevata; aufr. 6 convexi, ultimus non descendens; umbilicus majuseulus, perspectivus; apertura rotundato-lunaris; perist. simplex, acutum, margine columellari vix dilatato, breviter patente. — Diam. maj. 13, min. 11½, alt. 7 mill. (Coll. Forbes.)

Helix sudensis Pfr. Symb. III. p. 67.

Habitat rarissima prope Suda Candiae. (Forb.)

260. *H. Frivaldskyana* Rossmässler. †

T. perspective umbilicata, lenticulari-depressa, aretispira, obtuse carinata, albido-straminea, subtiliter costulato-striata; anfr. 5 convexi; apertura oblique lunaris; perist. reetum, acutum, simplex. — Diam. maj. 9, min. 8, alt. 3½ mill. (Rm.)

Helix Frivaldskyana Rossm. XI. p. 3. f. 694.

— *convexa* (Helicella) Fér. pr. 209. Hist. t. 82. f. 41 Nec Rafin.

Habitat in Rumelia (Friv.), prope Baruth (Olivier, Fér.)

261. *H. perspectiva* Say.

T. late et perspective umbilicata, orbicularis, superne vix convexiuseula, subtus excavata, tenuis, rufo-cornea, regulariter costulata; anfr. 6½ convexiuseuli, lente aecrescentes; apertura parva, lunato-subcircularis; perist. simplex, acutum, marginibus

distantibus. — Diam. maj. 8, min. $7\frac{1}{2}$, alt. vix 3 mill. (Coll. Nr. 137.)

Helix perspectiva Say in Philad. journ. I. 1817. p. 18.

— — (Helicella) Fér. pr. 198. Hist. t. 86. f. 1.

— — Chemn. ed. II. Helix N. 535. t. 85. f. 36—38.

— *perspectiva* Fér. hist. t. 79. f. 7.

Habitat in America boreali: Ohio, Massachusetts, Vermont.

Obs. Differt ab *H. perspectiva* testa minore, convexiore, anfractibus magis inaequalibus, umbilico angustiore et apertura subcirculari. An nihilominus ejus varietas minor?

263. *H. Belcheri* Pfr.

T. late umbilicata, depressa, tenuis, diaphana, superne confertim costulato-striata, subtus sublaevigata, nitida, concolor corneo-cerea; spira vix convexa; anfr. 5 vix convexiusculi, ultimus basi subplanulatus; apertura obliqua, lunato-ovalis; perist. simplex, acutum. — Diam. maj. $8\frac{1}{3}$, min. 7, alt. 4 mill. (Mus. Cuming.)

Helix Belcheri Pfr. in Proc. Zool. Soc. 1845. p. 128.

Habitat . . . ? (Ex itinere Belcheri.)

263^a. *H. gradata* Gould. †

T. parva, planorboidea, tenuis, nitida, rufo-viridis, luteo radiatum variegata, supra depressa, infra acetabuliformis; spirae anfr. 5 convexi, intra umbilicum angulati, oblique et confertim striati, striis interruptis volventibus decussati, ultimus subangulatus, versus aperturam deflexus; sutura canaliculata; apertura

obliqua, subcircularis; labrum acutum, ad umbilicum reflexum.
— Lat. $\frac{1}{5}$, alt. $\frac{1}{2}$ poll. (?) — (G.)

Helix gradata Gould 1846. Exped. shells p. 24.

Habitat in insula Tongataboo.

Obs. 1. «Forma et magnitudo *Helicis striatellae* Anth.»

Obs. 2. Nomine *H. gradatae* etiam 1846 aliam speciem descripsi; nescio
cujus sit prioritas? Conf. N. 60. pag. 38.

264. *H. ruderata* Studer.

T. perspective umbilicata, depressa, lutescenti-cornea, concolor, subtilissime costulato-striata; spira convexa; anfr. 5 convexi, ultimus basi rotundatus; apertura perobliqua, lunato-ovalis; perist. simplex, acutum, marginibus conniventibus. — Diam. maj. 8, min. 7, alt. $\frac{1}{4}$ mill. (Coll. Nr. 439.)

Helix ruderata Stud. Verz. p. 12.

Helix Turtoni Fleming brit. anim. p. 260.

γ. *Albina*: Fér. t. 79. f. 3.

δ. *Scalaris*: Fér. t. 79. f. 4.

Habitat vulgatissima in Germania, Gallia, Britannia, Suecia, Volhynia etc.

267. *H. humilis* Hutton. †

T. parvula, convexo-depressa, cornea, late et profunde umbilicata; anfr. 5 rotundati, ultimus subangulatus, penultimus aperturam circularem vix interruptens; perist. acutum. — Diam. 0, 125 poll. (Benson.)

Helix humilis Hutt. in Journ. As. Soc. VII. P. 1. p. 217.

Habitat in Himalaya, prope Simla.

268. *H. arctispira* Pfr.

T. umbilicata, depressa, subdiscoidea, confertim costata, albidula, epidermide tenui fusciscente induta; spira convexuscula; anfr. $5\frac{1}{2}$ convexi, angustissimi; umbilicus latus, perspectivus;

*) T. supra convexo-plana, subtus convexa, perforata; anfractu acuto; apertura semicordata. (Linn. It. Oel. et Gothl. p. 65.) — Haec descriptio *H. albella* Drap. potius convenit, quae autem in regionibus Europae borealis non reperitur.

apertura parvula, subverticalis, lunato-subcircularis; perist. simplex, acutum. — Diam. maj. $2\frac{1}{2}$, min. $2\frac{1}{4}$, alt. $1\frac{1}{4}$ mill. (Mus. Cuming.)

Helix arctispira Pfr. in Proc. Zool. Soc. 1846. p. 44.

Habitat in insula Juan Fernandez, una cum *H. tessellata*.

Obs. Characteribus intermedia inter *H. costellatam* et *tessellatam*, ab utraque spira convexiuscula etc. valde diversa.

269. ***H. tenuicostata* Shuttleworth.**

T. umbilicata, depressa, tenuis, tenuiter costulata, cornea; spira convexiuscula, obtusa; anfr. 4 convexiusculi, ultimus antice non descendens, basi sublaevigatus; umbilicus latiusculus, perspectivus; apertura subobliqua, lunato-circularis; perist. simplex, acutum, margine columellari vix dilatato. — Diam. maj. $2\frac{2}{3}$, min. $2\frac{1}{4}$, alt. $1\frac{1}{3}$ mill. (Mus. Cuming.)

Helix tenuicostata Shutt. in sched. Cuming.

Pfr. Symb. III. p. 68.

Habitat in Sardinia.

Obs. Nescio, an haec species ab auctore rito descripta sit? In hoc casu *H. tenuicostata* Dkr. (Nr. 880.) alio nomine designanda erit, in contrario species Shuttleworthiana.

§. 24.

270. ***H. euryomphala* Pfr.**

T. umbilicata, orbiculato-convexa, tenuis, pellucida, virenti-cornea, superne regulariter costulato-striata, lineis concentricis obsolete decussata, basi distantius striata, nitidissima; spira parum elevata, obtusa; anfr. 6 convexiusculi, ultimus dilatatus, subdepressus, antice non descendens; umbilicus magnus, pervius; apertura oblique lunato-ovalis, intus margaritacea; perist. rectum, simplex, marginibus conniventibus. — Diam. maj. 37, min. 32, alt. 17 mill. (Mus. Cuming.)

Helix euryomphala Pfr. in Proc. Zool. Soc. 1845. p. 71.

Habitat in insula Cuba.

271. ***H. Walkeri* (Zonites) Gray. †**

T. depressa, umbilicata, polita, flavo-brunnea; anfr. $3\frac{1}{2}$ citissime majores, ventricosi, tenuiter concentrice striati, dorso striis densis spiralibus; umbilicus profundus; apertura magna; faux albida. — Diam. 4 unc., axis 8 lin. (Gr.)

Zonites Walkeri Gray in Proc. Zool. Soc. 1834. p. 63.

— — Müll. synops. p. 43.

Mesomphix Walkeri Beck ind. p. 7.

Habitat in Nova Hollandia.

— 272. **H. fuscosa** Ziegler.

T. anguste umbilicata, subdepressa, corneo-lutescens, supra subtilissime decussato-plicatula, subtus laevis, nitidissima, pallida; anfr. $5\frac{1}{2}$ angusti, ultimus magnus; apertura rotundato-lunata; perist. rectum, simplex, acutum. — Diam. maj. 17, min. 15, alt. $9\frac{1}{2}$ mill. (Coll. Nr. 441.)

Obs. 2. An huc referenda *H. Blauneri* Shuttl. ? (Conf. Mittheil. d. nat. Ges. in Bern 1843. p. 43.)

— 286. *H. cayennensis* Pfr.

T. umbilicata, discoidea, striatula, nitida, corneo-lutescens; spira subplanulata; anfr. 5 vix convexiusculi, ultimus vix dilatatus, non descendens; umbilicus magnus, pervius; apertura lunato-circularis; perist. simplex, acutum. — Diam. maj. 44, min. $9\frac{1}{2}$, alt. $4\frac{1}{2}$ mill. (Coll. Nr. 448.)

Helix cayennensis Pfr. Symb. II. p. 24.

— — *Chemn.* ed. II. *Helix* N. 548. t. 84. f. 11 — 13.

Habitat in Cayenne (Petit de la Saussaie).

Obs. Superne *H. cellariae* similis, umbilico magno etc. distincta. Ab *H. concolore* differt colore et anfractuum lente crescentium numero.

287. *H. subplana* Binney. †

T. subdiscoidea, fuliginosa aut corneo-rufescens, nitens; spira depressa; anfr. 5 — 6; apertura semilunaris, transversa; labrum simplex, acutum; basis plana; umbilicus parvus. — Diam. vix $\frac{3}{4}$ poll. (Binn.)

Helix subplana Binn. in Bost. journ. IV. p. 244.

Habitat in America boreali: Tennessee.

Obs. An eadem species ac Nr. 420, nomine *H. glaphyrae* descripta?

288. **H. splendidula Pfr.**

T. late umbilicata, depressissima, pallide olivaceo-cornea, nitida, striatula, lineis concentricis magis minusve distinctis obsolete reticulata; spira plana; sutura profunda; anfr. $3\frac{1}{2}$ subplanulati, celeriter accrescentes, ultimus latus, antice non descendens; umbilicus latus, perspectivus; apertura obliqua, lunato-ovalis; perist. simplex, acutum, marginibus conniventibus, dextro oblique descendente, antrorsum subarcuato. — Diam. maj. $8\frac{1}{2}$, min. 7, alt. $3\frac{1}{3}$ mill. (Coll. Nr. 449.)

Helix splendidula Pfr. in Proc. Zool. Soc. 1845. p. 128.

— — Chemn. ed. II. *Helix* N. 524. t. 85. f. 1—3.

— Gray New Zeal. ined. t. 4. f. 44.

Habitat in Australia orientali, prope Torres-Strait.

Obs. Similis *H. nitenti*; differt umbilico latiore, apertura minore, transversim minus dilatata, etc. — Variat spira subelevata, striis concentricis distinctioribus.

289. **H. trochilioneides Orbigny.**

T. umbilicata, orbiculato-convexiuscula, tenuiter striatula, lucida, diaphana, albida; spira vix elevata; anfr. 6 planiusculi, ultimus teres; umbilicus mediocris; apertura subverticalis, lunato-subcircularis; perist. rectum, acutum, marginibus conniventibus. — Diam. maj. $4\frac{1}{2}$, min. 4, alt. $1\frac{2}{3}$ mill. (Coll. Nr. 450.)

Helix trochilioneides (Helicella) Orb. synops. p. 6.

— — Orb. voy. p. 254. t. 27. f. 12—15.

— — Chemn. ed. II. *Helix* N. 532. t. 85. f. 27—29.

— Fér. hist. t. 69 C. f. 7. 8?

Habitat in provincia Lagunensi Boliviae et prope Lima Peruviae.

290. **H. limatula Ward. †**

T. parva, orbiculato-depressa, umbilicata, tenuis, albida; anfr. 4 convexi, oblique et minutissime striati; apertura subcircularis, tenuis, acuta. — Diam. $\frac{1}{3}$ ". (Binn.)

Helix limatula Ward mss. Binn. in Bost. journ. III. p. 434. t. 21. f. 2.

Habitat in America boreali: Ohio et Indiana.

291. **H. coma (Zonites) Gray.**

T. late umbilicata, depressa, pallide fusca; spira planulata; anfr. 5 convexi, oblique et confertim acute elevato-lineati, fusco-striati; umbilicus conicus, perspectivus; apertura perobliqua, rotundato-lunaris; perist. simplex, tenue. — Diam. maj. $5\frac{1}{2}$, min. 5, alt. $2\frac{1}{2}$ mill. (Mus. Britt.)

- *Zonites coma* Gray in Dieffenb. trav. I. p. 263.

Habitat in Nova Seelandia.

— 292. **H. circumlineata Küster.**

T. umbilicata, depressa, subdiscoidea, tenera, hyalina, superne lineis confertis, spiralibus sculpta; sutura impressa, marginata; anfr. 5 angusti, vix convexiusculi; umbilicus latus, perspectivus; apertura verticalis, late lunaris; perist. simplex, acutum, margine supero antrorsum arcuato, columellari brevi, subsinuato, non dilatato. — Diam. maj. $5\frac{1}{2}$, min. 5, alt. 2 mill. (Coll. Nr. 151.)

Helix circumlineata Küst. mss. Pfr. Symb. III. p. 68.

— — Chemn. ed. II. Helix N. 149. t. 24. f. 22—25.

Habitat prope Budua Dalmatiae, ubi legit Cl. Küster.

— 293. **H. cyclostomoides Pfr.**

T. late umbilicata, superne vix convexa, subtus concava, laevigata, hyalina; anfr. 4 convexiusculi, rapide accrescentes, ultimus depressus, obsolete angulatus; apertura subcircularis; perist. simplex, acutum. — Diam. maj. 4, min. $3\frac{1}{3}$, alt. 2 mill. (Coll. Nr. 152. Spec. max.)

Helix cyclostomoides Pfr. in Wieg. Arch. 1840. I. p. 254.

— — Chemn. ed. II. Helix N. 534. t. 85. f. 24—26.

Habitat in insula Cuba rarissima. (Testas modo inanes in arena littorali prope Matanzas legi.)

— 294. **H. minuscula Binney.**

T. umbilicata, depressa, tenuis, pellucida, hyalina, nitida, sub lente ruguloso-striata; spira vix elevata; anfr. 4 planiusculi, ultimus teres, vix latior; umbilicus latus, pervius; apertura subcircularis; perist. simplex, acutum. — Diam. maj. $2\frac{1}{2}$, min. $2\frac{1}{3}$, alt. 4 mill. (Coll. Nr. 153.)

Helix minuscula Binn. in Bost. Journ. III. p. 435. t. 22. f. 4.

— — Pfr. Symb. II. p. 33.

— — Chemn. ed. II. Helix N. 530. t. 85. f. 20—23.

— *minutissima* Lea? (conf. Nr. 212.)

Habitat in America boreali: Vermont, Ohio.

Obs. Forma similis H. perspectivae, magnitudine et habitu similior H. lineatae Say.

295. **H. minuta Villa. †**

T. minima, umbilicata, suborbiculata, depressiuscula, glabra, pellucida, nitida; apertura anguste lunata; perist. simplex, acutum. — Diam. 4, alt. $\frac{1}{2}$ mill. (V.)

Helix minuta Villa dispos. syst. p. 55.

— — Arad. et Magg. cat. p. 87.

Habitat in Etruria (»legitur in arena conchyliacea Ariminensi una

cum *H. pygmaea* et *Polyph. acicula*: Villa), rara in littore Catenensi (Arad.).

* * *

296. *H. Binneyana* Pfr.

T. late umbilicata, depressa, subdiscoidea, corneo-lutescens, strigis undatis castaneis, basi obsoletis marmorata, irregulariter plicatula, lineis impressis confertissimis superne distincte, subtus obsoletius deussata; spira plana; anfr. 5 convexi, ultimus teres, vix descendens; umbilicus late eonicus; apertura perobliqua, semiovalis; perist. simplex, margine dextro valde antrorsum arcuato, subinflexo, columellari recedente. — Diam. maj. 45, min. 13, alt. 6 mill. (Coll. Nr. 454.)

Helix Binneyana Pfr. in Zeitschr. f. Mal. 1847. p. 43.

— — Chemn. ed. II. *Helix* N. 693. t. 111. f. 10—12.

Habitat in insula Chiloe (E. B. Philippi).

297. *H. dissimilis* Orbigny.

T. umbilicata, depressa, tenuis, supernè confertim plicatula, pallide corneo-straminea, superne maculis et flammis irregularibus, basi punctis lineisque rufis ornata; spira plana; sutura profunda; anfr. 5½ convexi; umbilicus magnus, pervius; apertura vix obliqua, rotundato-lunaris; perist. simplex, aëutum. — Diam. maj. 11, min. 9½, alt. 5¼ mill. (Coll. Nr. 455.)

Helix dissimilis Orb. synopsis. p. 5.

— — Orb. voy. p. 247. t. 26. f. 18—21. *)

— — Desh. in Fér. hist. p. 18. t. 69 C. f. 9. 10. **)

— — Chemn. ed. II. *Helix* N. 558. t. 89. f. 1—3.

— *histrion* Mühlf. Mus. in Anton Verz. p. 38.

— — Pfr. Symb. II. p. 30.

Euryomphala plagiata Beck ind. p. 8. (teste Anton in litt.)

Habitat prope Concepcion Chilensium (Orb.), in insula Ohetaroa (Cuming).

Obs. Conf. *H. coactiliata* Fér. (Nr. 522) et affines.

*) T. orbiculata, perforata, depressa, tenui, diaphana, striata, fusco-pallidior, rubro-maculata ornata; spira plana; anfr. 5; apertura rotunda; labro tenui, acuto. — Long. 9, alt. 5 mill. (Orb. l. c.)

**) T. late umbilicata, orbiculato-discoidea, supra plana, subtus convexiuscula, corneo-fulva, translucida, rubro superne articulatum fasciata; anfr. 6 convexiusculis, angustis, superne striis longitudinalibus tenuibus transversalibusque exilissimis decussatis; apertura suborbiculari, marginibus acutis, tenuissimis. — Diam. 12, alt. 6 mill. (Dh. l. c.)

298. *H. quadrata* Férussac.

T. umbilicata, depressa, sub lente confertissime striata, tenuis, diaphana, straminea, rufo-flammulata et 4—3fasciata; spira depressa; anfr. $5\frac{1}{2}$ convexiusculi, celeriter accrescentes; umbilicus majusculus, perspectivus; apertura lunato-ovalis; perist. simplex, acutum, marginibus conniventibus, columellari subdilatato, patente. — Diam. maj. 7, min. 6, alt. 3 mill. (Mus. Cuming. spec. max. et Coll. Nr. 456.)

Helix quadrata Fér. Mus.

— — Desh. in Fér. hist. p. 20. t. 69 C. f. 11. 12. *)

— — Chemn. ed. II. *Helix* N. 559. t. 89. f. 4—7.

— *Kingi* Pfr. in Proc. Zool. Soc. 1845. p. 125.

β. Testa flava, transversim obscure fusco-rubescente zonata. (Dh.)

Habitat in insula Juan Fernandez (Cuming).

299. *H. pusio* King. †

T. rotundato-complanata, creberrime striata, translucens, maculis castaneo-rufis ornata. — Long. $\frac{1}{10}$, lat. $\frac{3}{10}$ poll. (K.)

Helix pusio King in Zool. Journ. V. (1832.) p. 339.

Habitat in insula Juan Fernandez.

Obs. Speciem male descriptam in collectionibus Londinensibus eruere non potui. An eadem ac praecedens?

300. *H. hystrix* Mighels.

T. umbilicata, depressa, subdiscoidea, regulariter costulata, corneo-lutea, pilis rectis, rigidis, deciduis hirsuta, superne rufo-tessellata; spira plana, medio subimmersa; anfr. 5 convexi, ultimus descendens, basi lineis elevatis, interdum obsoletioribus decussatus; umbilicus latus, perspectivus; apertura lunato-subcircularis; perist. simplex, acutum. — Diam. maj. $5\frac{3}{4}$, min. 5, alt. $2\frac{1}{2}$ mill. (Coll. Nr. 457.)

Helix hystrix Mighels in sched.

— — Pfr. Symb. III. p. 67.

— — Chemn. ed. II. *Helix* N. 560. t. 89. f. 8—11.

— *setigera* Gould in sched.

Habitat in insulis Sandwichensibus: Wahoo.

300*. *H. ziczac* Gould. †

T. parva, rotundata, depressa, stramineo-albida, lineolis obliquis fulminantibus fuscis picta, et laminis acutis confertis re-

*) *T. orbiculato-discoidea*, late umbilicata, fulvo-fusca, rubescente quadrata, densissime tenuissimeque striata; anfract. 5 convexis, sutura profunda separatis; apertura obliqua, simplici, subdilatata, rotundato-semilunari; labro simplici, acuto. — Diam. 8, alt. 4 mill. (Dh. l. c.)

flexis pilosis lyrata, subtus convexa, umbilico magno scalariformi perforata; anfr. 6 convexi, angusti; apertura subcircularis, ad basin subangulata; labrum simplex, prope umbilicum reflexum. — Lat. $\frac{3}{10}$, alt. $\frac{1}{6}$ poll. (G.)

Helix ziczac Gould 1846. Exped. shells p. 17.

Habitat in Nova Hollandia (New South Wales).

301. *H. tessellata* Mühlfeldt.

T. umbilicata, discoidea, utrinque plana, tenuis, pallide eorinea, strigis angustis, undatis, rufis picta; anfr. 6 — 7 angustissimi, ultimus subtus subinflatus; umbilicus mediocris, pervius; apertura lunato-rotundata; perist. simplex. — Diam. 4, alt. 2 mill. (Coll. Nr. 158.)

Helix tessellata Mf. Mus. Ant. Verz. p. 36.

— — Pfr. Symb. II. p. 40.

— — Chemn. ed. II. *Helix* N. 562. t. 89. f. 16 — 19.

— Fér. hist. t. 86. f. 4.

Habitat in insula Juan-Fernandez (Cuming).

302. *H. epidermia* Anton.

T. late et profunde umbilicata, discoidea, epidermide brunea induta, utrinque costulata; spira plana; anfr. 4 sensim accrescentes, convexiusculi; apertura subverticalis, subcircularis; perist. acutum, simplex, marginibus approximatis. — Diam. maj. 5, min. $4\frac{1}{4}$, alt. $4\frac{3}{4}$ mill. (Coll. Nr. 159.)

Helix epidermia Anton Verz. p. 36. N. 1358.

— — Chemn. ed. II. *Helix* N. 563. t. 89. f. 20 — 23.

— *costellata* Desh. in Fér. hist. p. 19. t. 83. f. 1. 2 *) Nec Orb.

Habitat prope Valparaiso Chilensium (Cuming).

Obs. Conf. *H. costellata* Orb. Nr. 252.

Nr. 302 = *Hel. rivularis* Krauss. 25. 1848, p. 19.
§. 23.

303. *H. declivis* Pfr. †

T. orbiculata, depresso-conoidea, subtus convexo-depressa, pallida; spira conica, depressa; anfr. 6 rufescentes, depresso-planiusculi, declives, rugis armatis, crebris, tenuibus, in junioribus regularibus, in adultis multidistantibus majoribus sculpti, infimus ad peripheriam acute carinatus, carina fusco-fasciata aut albida, inferne faseia fusea eincta; umbilicus profundus, angustus,

*) T. discoidea, supra plana, subtus late umbilicata, fulva, longitudinaliter et oblique costellata: costellis distantibus submembranaceis elatis; anfr. 5 convexis in interstitiis costellarum tenue striatis; apertura simplici, semilunari, obliqua; labro acuto. — Diam. 5, alt. vix 2 mill. (Dh. I. c.)

extus dilatatus; apertura ovata, antice angulata, margine obtusiuscula. — Diam. 44, alt. 23 mill. (Guill.)

Carocolla Tritoniensis Le Guill. in Rev. zool. 1845. Mai p. 88. Nec II. Tritoniens. Guill. 1842.

Helix declivis Pfr. Symb. III. p. 48.

Habitat ad Triton-Bay Novae Guineae.

304. *H. Guérini* Pfr.

T. umbilicata, trochiformis, epidermide fusca, rugosa induta; anfr. $7\frac{1}{2}$ vix convexiusculi, basi carinati: carina pilis confertis dense ciliata; basis convexiuscula; umbilicus angustissimus, pervius; apertura lata, lunaris; perist. simplex, marginibus callo tenuissimo, nitido junctis. — Diam. maj. 46, min. 43, alt. 40 mill. (Coll. Nr. 460.)

Helix Guérini Pfr. in Revue zool. 1842. p. 304.

— — Pfr. Symb. II. p. 29.

— — Phil. Icon. I. 3. p. 50. t. 3. f. 6.

— — Chemn. ed. II. Helix N. 544. t. 87. f. 45. 46.

Habitat in montibus Neelgherries Indiae orientalis. (Perrottet).

305. *H. Barclayana* Pfr.

T. umbilicata, depresso-turbinata, confertim oblique costata, alba, epidermide fusco-olivacea induta; spira conoidea, apice obtusa; sutura profunda; anfr. $5\frac{1}{2}$ convexi, ultimus medio carinatus (interdum obsolete bicarinatus), basi convexiusculus; umbilicus mediocris, fere cylindricus; apertura subverticalis, quadrangularis; perist. simplex, acutum, margine columellari verticaliter descendente, eum basali angulum formante. — Diam. maj. 48, min. 46, alt. 42 mill. (Mus. Cuming.)

Helix Barclayana Pfr. in Proc. Zool. Soc. 1846. p. 440.

Habitat in insula Mauritii. (Isle de France: Barclay.)

306. *H. bermudensis* Pfr.

T. umbilicata, conoideo-lenticularis, tenuiuseula, carinata, leviter ruguloso-striata, pallide fuscescens, fulvo-marmorata, cingulo castaneo supra et latiore infra carinam ornata; anfr. 7 vix convexiusculi, lente aecrescentes; umbilicus augustus, pervius; apertura subtrapezia; perist. simplex, rectum, intus iuvassatum, album, marginibus callo junctis, columellari verticali, brevi, reflexiuseulo, eum basali angulum subrectum formante. — Diam. maj. 23, min. 21, alt. 12 mill. (Spec. coll. Sauliae.)

Helix bermudensis Pfr. in Proc. Zool. Soc. 1845. p. 67.

β . Spira paulo elatiore, fasciis obsoletis: diam. maj. 24, min. 19, alt. 13 mill. (Coll. Nr. 161.)

Helix bermudensis var. Chemn. ed. II. Helix N. 542. t. 87. f. 9. 10.

Habitat in insulis Bermudis.

306^a. *H. Eurydice* Gould. †

T. tenuis, depresso-pyramidata, acutissime carinata, pallide virens, linea castanea volvente supra et infra picta, subtus planulata, umbilico lato et profundo perforata; anfr. 5 — 6 vix convexi; apex rotundatus; apertura transversa, acute triangularis; labrum acutum. — Lat. $\frac{13}{20}$, alt. $\frac{11}{40}$ poll. (G.)

Helix Eurydice Gould 1846. Exped. shells p. 24.

Habitat in ins. Tonga Tabou.

Obs. «Similis *H. Cressidae* (Nr. 348^b.) Forma fere exacte *H. elegantis*».

307. *H. retifera* Pfr.

T. umbilicata, obtuse trochiformis, striato-plicatula, lineis nonnullis concentricis elevatis reticulata, carinata, diaphana, sericina, pallide cornea; spira elevata, obtusa; anfr. $6\frac{1}{2}$ planiusculi, ultimus basi subplanus, striatus; umbilicus mediocris, pervius; apertura depressa, securiformis; perist. simplex, acutum, margine supero brevi, basali plane arcuato. — Diam. maj. 7, min. $6\frac{3}{4}$, alt. 4 mill. (Coll. Metcalf.)

Helix retifera Pfr. in Proc. Zool. Soc. 1845. p. 73.

Habitat in montibus Neelgherries Indiae orientalis.

307^a. *H. tentoriolum* Gould. †

T. parva, elevata, trochiformis, ad apicem rotundata, pallide virescens, oblique et coneinne striata, basi in umbilicum medio-crem convexa; anfr. 6 planulati et carina acutissima, alba cineti; apertura subtriangularis, basi rotundata; labrum simplex, ante umbilicum reflexum. — Lat. $\frac{2}{5}$, alt. $\frac{3}{10}$ poll. (G.)

Helix tentoriolum Gould 1846. Exped. shells p. 23.

Habitat Upolu.

308. *H. Aucklandica* Le Guillou. †

T. orbiculato-conoidea, tenuis, parva, pellucida, luteo-fuscescens; anfr. 6 depresso-subconvexi, striati, maculis longitudinalibus spadiceis, acquidistantibus regulariter picti, ultimus carinatus, superne striolis transversis obsoletis notatus, subtus convexior, immaculatus, profunde umbilicatus; apertura subrotundata,

anteriorius subangulata; perist. acutum, fragile. — Diam. 7, alt. 4 mill. (Guill.)

Helix Aucklandica Le Guillou in Revue zool. 1842. p. 140.

Habitat in insulis Auckland.

309. *H. solarium* Quoy.

T. umbilicata, orbiculato-pyramidata, acute carinata, striata, diaphana, fulva; spira brevis, conica, apice obtusa; anfr. 7 exertiusculi, plani, ultimus basi planulatus, ad umbilicum medio-crem, pervium angulatus; apertura depressa, securiformis; perist. simplex, acutum. — Diam. maj. 9, min. 8, alt. $3\frac{3}{4}$ mill. (Coll. Nr. 162.)

Helix solarium Quoy et Gaim. Astrol. II. p. 131. t. 11. f. 24—29.

— — Lam. ed. Dh. 189. p. 149.

— — Chemn. ed. II. Helix N. 546. t. 87. f. 24—24.

— Pér. hist. t. 63 B. f. 6. 7.

Caracolla solarium Beck ind. p. 31.

Habitat ad portum Carteret Novae Hiberniae (Quoy, Hinds).

310. *H. arcuata* Pfr.

T. umbilicata, orbiculato-convexa, tenuis, pellucida, pallide cornea, confertim et regulariter arcuato-plicata; spira late conoidea, apice obtusiuscula; anfr. 6 vix convexiusculi, carina acuta, serrulata marginati, ultimus circa umbilicum magnum, fere cylindricum subcompressus; apertura angulato-lunaris, lata; perist. simplex, acutum, margine columellari brevi, verticali. — Diam. maj. $5\frac{1}{2}$, min. 5, alt. $2\frac{3}{4}$ mill. (Mus. Cuming.)

Helix arcuata Pfr. in Proc. Zool. Soc. 1846. p. 110.

Habitat in provincia Cagayan insulae Luzon. (Cuming.)

311. *H. oceanica* Le Guillou. †

T. orbiculato-convexa, carinata, umbilicata; anfr. 8 albidii, maculis spadiceis angulato-flexuosis tenuissime transversim striati, depresso-planii, submarginati; apex obtusus, fuscus; basis depresso-concava; umbilicus parvus, profundus, acute marginatus; apertura angusta, antice subacuta. — Diam. $5\frac{1}{4}$, alt. 3 mill. (G.)

Helix oceanica Le Guill. in Revue zool. 1842. p. 140.

Habitat in insula Taiti.

§. 24.

312. *H. Chevalierii* Souleyet. †

T. orbicularis, umbilicata, tenue carinata, conico-depressa, fusca, ad carinam castaneo-fasciata, subtus convexa, olivacea; anfr. 6 obsolete rugulosi, basi marginati; apertura ovata, obliqua,

intus fuscescens, castaneo-fasciata; perist. acutum; umbilicus latus, infundibuliformis, profundus. — Diam. 37, alt. 20 mill. (S.)

Helix Chevalierii Soul. in Revue zool. 1842. p. 101.

Habitat in peninsula Malaccensi.

313. *H. Metcalfei* Pfr.

T. late umbilicata, depressa, discoidea, acute carinata, striatula, pallide vel rufescenti-cornea, utrinque juxta carinam albam castaneo-unifasciata; spira vix elevata; anfr. 6 vix convexiusculi, ultimus antice vix descendens; apertura subtriangularis; perist. simplex, margine supcro antrorsum arcuatim dilatato, depresso, basali ad columellam leviter arcuato. — Diam. maj. 21, min. 19, alt. 7 mill. (Coll. Nr. 163.)

Helix Metcalfei Pfr. in Proc. Zool. Soc. 1845. p. 66.

— — *Chemn.* cd. II. Helix N. 623. t. 97. f. 10—12.

β . Minor, flavida, lineis angustis nigricanti-rufis juxta carinam: diam. maj. 17, min. 15; alt. $5\frac{1}{2}$ mill. (Spec.)

Helix Metcalfei var. *Chemn.* l. c. t. 97. f. 13. 14.

γ . Unicolor, fusco-cornea: diam. maj. 15, min. $13\frac{2}{3}$, alt. 5 mill. (Spec.)

Helix Metcalfei var. *Chemn.* l. c. t. 97. f. 15. 16.

Habitat in insulis Philippinis, α Sibonga insulae Zebu, β Tanhay ins. Negros, γ in ins. Siquijor (Cuming).

314. *H. Crouanii* Le Guillou. †

T. discoidea, umbilicata, utroque latere »umbilicata« (convexa? Pfr.), castanea, tenuiter striata; anfr. 6 supra depresso-convexiusculi, linea fusca fasciati, ultimus carinatus: carina acuta alba lateraliter linea fusca marginata; umbilicus profundus; apertura subovalis, acuta; labium tenue, acutum. — Diam. 18—19; alt. 10—12½ mill. (G.)

Helix Crouanii Le Guill. in Revue zool. 1842. p. 138.

β . Spira conico-depressa, ultimo anfractu subobtusè carinato: diam. 18, alt. 12 mill.

Habitat ad Haoua, β in insulis Salomonis.

314^a. *H. strigosa* Gould. †

T. orbicularis, depressa, seabrata, late umbilicata, cinereo-grisea vel fuscescens, fasciis linearibus volventibus pallide fuscis interdum subtus notata; anfr. 5 convexiusculi, ultimus angulatus et prope aperturam deflexus; apertura circularis; labrum simplex, continuum. — Lat. $\frac{9}{10}$, alt. $\frac{2}{5}$ poll. (G.)

Helix strigosa Gould 1846. Exped. shells p. 18.

Habitat in interiore provinciae Oregon.

Obs. Quoad formam ab auctore cum *H. alternata*, quoad reliquos characteres cum *H. alpina* comparatur.

315. **H. exclusa Férussac.**

T. umbilicata, discoidea, depressa, striata, earinata, marmorata, fasciis 2—3 rubris cineta; anfr. 5 planulati, ultimus eirea umbilicum angustum excavatus; apertura rhomboidalis; perist. simplex, acutum, margine basali leviter areuato. — Diam. maj. 20, min. 18, alt. 40 mill. ex ic. Quoyi. (Coll. Nr. 464.)

Helix exclusa Fér. pr. 297. Voy. de Freycin. Zool. p. 472.

— — Quoy et Gaim. Astrol. II. p. 127. t. 10. f. 22—25.

— — Lam. ed. Dh. 491. p. 449.

— — Chemn. ed. II. Helix N. 622. t. 97. f. 7—9.

— *marginata* Müll. verm. II. p. 44. N. 244 (teste Beck)??

— — Pfr. in Phil. Icon. I. 4. p. 80. t. 4. f. 40.

Lister t. 67. f. 66.

Habitat ad Rawak et Dorey Novae Guineae et in ins. Vanikoro (Quoy.)

Obs. Cl. Becki sententiam, hanc speciem esse *H. marginatam* Mülleri (cui labrum reflexum expressis verbis ascribit auctor) admittere non possum. Speciem vero Müllerianam in *H. scabrosa* Fér. (Grayana Pfr.) quacrendam esse nunc persuasus sum. (Conf. Nr. 4031.)

316. **H. papua Lesson.**

T. discoidea, umbilicata, depressa, acute carinata, luteo-cornea, rubro-fusco-unifasciata (usque ad apicem); apertura triangularis; perist. simplex. — Diam. 5 lin. (L.) Coll. Nr. 465?

Helix papua Less. in voy. de la Coquille p. 313.

Habitat in Nova Guinea.

Obs. «Differt ab *H. planorbi* spira magis elata, umbilico profundiore, minus aperto». (Less.) — An praecedentis varietas?

317. **H. planorbis Lesson.**

T. late umbilicata, orbicularis, valde depressa, tenuis, fragilis, lutescens, superne olivaceo-marmorata; spira vix convexa; anfr. 5, ultimus carinatus: earina tenui, acuta; apertura oblique triangularis; perist. simplex. — Diam. maj. 15, min. 14, alt. 5½ mill. (Coll. Nr. 466.)

Helix planorbis Less. voy. de la Coq. p. 312. t. 43. f. 4.

— *marginata* Müll. (teste Beck.)

Habitat in Nova Guinea (Less.), ins. Negros Philippinarum (Cuming).

318. **H. Swainsoni Pfr.**

T. umbilicata, utrinque depressissima, tenuis, pellucida, subarcuatim ruguloso-striata, virescenti-fulva, lineis 2 rufis ornata; anfr. 5 depressi, medio convexiuseuli, carinati: earina acuta, breviter prominente, subrugulosa; umbilicus medioeris, profun-

cus; apertura perobliqua, depresso securiformis; perist. simplex, rectum, margine columellari subincrassato. — Diam. maj. 16, min. 14, alt. 5 mill. (Mus. Cuming.)

Helix Swainsoni Pfr. in Proc. Zool. Soc. 1846. p. 28.

Habitat in insula Tahiti (Tucker).

318^a. *H. Troilus* Gould. †

T. variabilis, depresso-conica, subdiscoidea, leviter et obtuse striata, flavescens, subtus convexa, in umbilicum amplum incurvata, carinata: carina utrinque linea spirali castanea marginata (interdum coloribus inversis); anfr. 5½ rotundati; apertura semilunaris, superne angulata; labrum acutum. — Lat. ¾, alt. ⅓ poll. (G.)

Helix (Caracolla) *Troilus* Gould 1846. Exped. shells p. 23.

Habitat in insulis Samoa.

Obs. «Haud dissimilis *H. explanata* Quoy, sed minor, magis umbilicata, etc.»

318^b. *H. Cressida* Gould. †

T. variabilis, solida, depressa, lenticularis, acute carinata, nitida, dense et acute striata, coloribus flavo-viridibus et castaneis coalescentibus fasciata, infra subplanulata, umbilico magno et profundo perforata; anfr. 5 vix convexi; apertura triangularis; labrum acutum; faux lilacina. — Lat. ⅗, alt. ¼ poll. (G.)

Helix Cressida Gould 1846. Exped. shells p. 23.

Habitat in ins. Samoa et Tahiti.

Obs. «Forma fere sicut *H. acies*, sed subtus planior et minor.»

319. *H. acutimargo* Pfr.

T. umbilicata, depressa, supra planiuscula, basi convexa, tenuis, pellucida, pallide cornea, acute carinata, supra carinam striis nonnullis confertis, concentricis notata; anfr. 6 lente accrescentes; umbilicus mediocris, pervius; apertura angulato-lunaris; perist. simplex, acutum. — Diam. maj. 16, min. 14½, alt. 6 mill. (Coll. Nr. 467.)

Helix acutimargo Pfr. in Proc. Zool. Soc. 1845. p. 40.

— — Chemn. ed. II. *Helix* N. 620. t. 97. f. 4 — 3.

Habitat in insula Negros Philippinarum (Cuming).

Obs. Similis speciminibus junioribus *H. compressae*, qualia circa Fiume legi, a quibus differt umbilico angustiore, anfractibus angustioribus et sculptura.

320. *H. radula* Pfr.

T. umbilicata, depressa, sublenticularis, solidiuscula, pallide cornea, carinata; striis incrementi confertis et lineis acute promi-

nentibus concentricis exasperata; anfr. 6 convexiusculi, lente accrescentes, ultimus basi inflatus, confertim et radiatim costulato-striatus; umbilicus medioeris, pervius; apertura lunato-elliptica; perist. simplex, vix incrassatum, marginibus callo lineari junctis. — Diam. maj. 24, min. 19, alt. 10 mill. (Coll. Nr. 168.)

Helix radula Pfr. in Proc. Zool. Soc. 1845. p. 40.

— — *Phil.* Icon. I. 7. p. 155. t. 4. f. 11.

— — *Chemn.* ed. II. *Helix* N. 621. t. 97. f. 4—6.

Habitat in provincia Iloconensi insulae Luzon (Cuming).

321. *H. strigilis* Pfr.

T. umbilicata, depressa, lenticularis, tenuis, pellucida, pallide cornea, acute carinata; spira parum elevata; anfr. 6 angusti, vix convexiusculi, superne confertim costulato-striati, lineis elevatis concentricis reticulati, ultimus basi convexior, laevigatus, nitidus; umbilicus medioeris, cylindricus; apertura subverticalis, angulato-lunaris; perist. simplex, acutum, margine supero brevi, strictiusculo, basali valde arcuato. — Diam. maj. 42, min. 44, alt. 5½ mill. (Mus. Cuming. et Coll. Nr. 169.)

Helix strigilis Pfr. in Proc. Zool. Soc. 1845. p. 124.

— — *Chemn.* ed. II. *Helix* N. 543. t. 87. f. 11—14.

Habitat ad Himamaylan insulae Negros Philippinarum (Cuming).

322. *H. albocincta* Pfr.

T. umbilicata, orbiculato-convexa, tenuiuscula, superne regulariter et confertim striata, sericina, fulvo-cornea, carinata; spira depresso-conica, apice obtusa; anfr. 5½ convexi, carina alba cincti, ultimus basi sublaevigatus, lineis subtilibus, concentricis notatus; umbilicus medioeris, pervius; apertura obliqua, angulato-lunaris; perist. simplex, acutum. — Diam. maj. 44, min. 40, alt. 5 mill. (Coll. Nr. 170.)

Helix albocincta Pfr. in Proc. Zool. Soc. 1845. p. 123.

— — *Chemn.* ed. II. *Helix* N. 545. t. 87. f. 17—20.

Habitat ad Himamaylan insulae Negros (Cuming).

323. *H. ptychodes* Pfr.

T. umbilicata, depressissima, discoidea, tenuissima, arcuato-plicata, sub epidermide tenui, fusca, decidua hyalina; spira planiuscula; anfr. 4½—5 planulati, ultimus basi vix convexior; umbilicus medioeris; apertura perobliqua, ampla, angulato-lunaris; perist. simplex, acutum. — Diam. maj. 10½, min. 9, alt. 3½ mill. (Mus. Cuming.)

Helix ptychodes Pfr. in Proc. Zool. Soc. 1845. p. 137.

Habitat prope Bluefields insulae Jamaicae (Gosse).

324. **H. cumberlandiana** Lea. †

T. lenticulata, carinata, striata, albida, fusco-notata, late umbilicata, ad carinam superne et infra impressa; anfr. 5; apertura angulata, intus sulcata; labrum acutum. — Diam. 0,54, long. 0,44 poll. (Lea.) — Diam. 44, alt. 4 mill. (ex ic.)

Carocolla cumberlandiana Lea obs. III. p. 67. t. 6. f. 64.

Habitat in montibus cumberlandianis, prope Jasper: Tennessee (Lea).

Obs. «Similis H. alternatae Say, facile distinguenda forma lenticulari et carina. Anfractus omnes in umbilico conspicui». (Lea.)

325. **H. rudiusscula** Pfr.

T. umbilicata, depressa, lenticularis, tenuis, irregulariter rugoso-striata, rudiusscula, corneo-fusca; spira vix convexiuscula; anfr. 5 subplanulati, regulariter accrescentes, ultimus non descendens; umbilicus majusculus, perspectivus; apertura perobliqua, angulato-lunaris; perist. simplex, acutum, margine supero antrorsum arcuato-dilatato. — Diam. maj. 9, min. 8, alt. 3 mill. (Mus. Cuming.)

Helix rudiusscula Pfr. Symb. III. p. 68.

Habitat ...? (Ex itinere Belcheri cum nave: Sulphur.)

326. **H. solaria** Menke.

T. latissime umbilicata, lenticularis, superne planiuscula, subtus excavata, tenuis, costulato-striata, cornea, rufo-maculata, acute carinata; anfr. 6½ planulati, lente accrescentes; apertura securiformis; perist. simplex, acutum. — Diam. maj. 7, min. 6¼, alt. 2½ mill. (Coll. Nr. 474.)

Helix solaria Mke. synops. ed. 2. p. 19.

— — Rossm. VII. p. 12. f. 453.

Gonyodiscus perspectivus Fitzing. syst. Verz. p. 98.

Euryomphala solaria Beck ind. p. 9.

Patula solaria Held in Isis 1837. p. 946.

Habitat in Austria, Carinthia, Carniolia, Lombardia.

327. **H. Argonautula** Webb et Berthelot. †

T. depressa, tenuis, carinata (carina caelata), orbiculata, supra plana: anfractibus elevatis, subtus convexa, argute striata,

cinerea, fasciis 2 interruptis pallide fuscis lincolaque intermedia ornata; apertura depressa, subdeltoidea; perist. simplex, tenue, continuum; umbilicus largiusculus, orbicularis, profundus. (W. et B.) — Diam. 8 — 10, alt. 4 mill. (ex ic.)

Helix Argonautula Webb et Berth. synops. p. 325.

— — *Orb. canar.* p. 64. t. 2. f. 13 — 18.

Carocolla Argonautula Villa disp. p. 49.

Habitat in insulis Canariis.

328. *H. Parlatoris* Bivona fl.

T. parva, umbilicata, depressa, carinata, supra plana, subtus convexa, cornea, pilis longis villosa; anfr. 4 planiusculi, ultimus descendens; apertura subangulata, rotundato-lunaris; perist. rectum, simplex, acutum, marginibus approximatis. — Diam. maj. 9, min. 7, alt. 4½ mill. (Coll. Nr. 172.)

Helix Parlatoris Biv. fl. in: l'Occhio 1839. N. 9. f. 1.

— — *Rossm.* XI. p. 2. f. 688.

Helix croatica Fér. hist. t. 80. f. 5.

Habitat in Croatia, var. β in Carniolia.

335. *H. carica* Roth. †

T. late umbilicata, paucispira, depresso-orbiculata, obtuse carinata, supra sericina, subtilissime decussata, seriatim granulata, striata, corneo-lutescens, subtus laevis, corneo-albescens, luteo-radiata; sutura profunda; anfr. $4\frac{1}{2}$ convexiusculi; apertura oblique lunato-ovalis; perist. acutum, rectum, intus callosum, potius labiatum; labium album, externe luteo-pellucens. — Alt. 6, lat. 44 lin. (R.) — Diam. maj. 25, min. 23, alt. 44 — 42 mill. (ex ic.)

Helix carica Roth diss. p. 47. t. 1. f. 6. 7. 24.

Habitat ad Cacamo Cariae.

336. *H. smyrnensis* Roth.

T. late umbilicata, orbiculato-convexa, obtuse carinata, corneo-lutescens; superne subtiliter granulato-decussata, subtus laevis, nitida, remote luteo-radiata; anfr. 6 contabulati; apertura oblique lunaris; perist. rectum, simplex, acutum, intus remote labiatum. — R. a. = 3 : 4. — Diam. maj. 28, min. 26, alt. 43 mill. (Coll. Nr. 479.)

Helix smyrnensis Roth diss. p. 46. t. 1. f. 8. 9.

— — Chemn. ed. II. Helix N. 647. t. 96. f. 42 — 44.

Habitat prope Smyrnam, Sardum, in insula Syme.

337. *H. gemonensis* Férussac.

T. late umbilicata, orbiculato-convexa, carinata, lutescens, superne striata, subdecussata, sericina, subtus glabra, nitida; anfr. 6 planiusculi; apertura angulato-lunata; perist. rectum, acutum, sublabiatum. — R. a. = 2 : 3. — Diam. maj. 48, min. 46, alt. 8 mill. (Coll. Nr. 480.)

Helix gemonensis Fér. pr. 204. Hist. t. 80. f. 6.

Habitat in insula Syra (Roth, Forbes).

341. *H. pisiformis* Pfr.

T. perforata, globulosa, tenuiusecula, oblique striatula (striis ad suturam distinctioribus), corneo-lutescens, linea 4 alba, opaca cingulata; spira conoidea, acutiusecula; anfr. $5\frac{1}{2}$ convexiuseuli, penultimus subcarinatus, ultimus antice subdescendens; apertura obliqua, rotundato-lunaris; perist. acutum, subexpansum, intus remote et valide albo-labiatum, marginibus vix convergentibus, columellari subdilato, patente. — Diam. maj. 44, min. $9\frac{1}{3}$, alt. 7 mill. (Mus. Stuttgart. et Coll. Nr. 183.)

Helix pisiformis Pfr. Symb. III. p. 95.

— — Chemn. ed. II. Helix N. 94. t. 47. f. 8—10.

Habitat in Caucaso.

342. *H. syriaca* Ehrenberg.

T. subimperfata, globoso-depressa, grisea, pellucidula, plerumque fasciis 2 calcareis, opacis ornata, parum nitida, minutissime rugulosa; spira convexiusecula; anfr. 5 planiuseuli, ultimus antice vix descendens; apertura late lunaris; perist. subpatulum, rufum, albo-labiatum. — Diam. maj. $42\frac{1}{2}$, min. 40, alt. $7\frac{1}{2}$ —8 mill. (Coll. Nr. 184.)

Helix syriaca Ehrenb. Symb. phys. Moll.

— — Chemn. ed. II. Helix N. 629. t. 98. f. 4—6.

— *onychina* Rossm. IX. p. 7. f. 568.

— — Phil. Sicil. II. p. 406.

Bradybaena syriaca Beck ind. p. 19.

Descript. de l'Egypte t. 2. f. 48?

β. Minor, subunicolor:

Helix gregaria Zgl., Rossm. IX. f. 569.

Habitat in Syria, Egypto, Algeria, var. β in Sicilia.

343. *H. occidentalis* Récluz.

T. rimato-perforata, globoso-depressa, ruguloso-striata, epidermide virenti-flava, hispida induta, plerumque rufo-bizonata;

anfr. $4\frac{1}{2}$ —5 convexi, sutura profunda distincti, ultimus dilatatus, basi convexus; apertura lunato-semiovalis, intus lactea; perist. acutum, expansiusculum, intus valide albo-labiatum, margine columellari dilatato. — Diam. maj. 9, min. 7, alt. 5 mill. (Mus. Cuming.)

Helix Ponentina Morelet moll. du Port. p. 65. t. 6. f. 4.

— *occidentalis* Réchuz in Revue zool. 1845. p. 344.

— *lisbonensis* Pfr. Symb. III. p. 68.

— — Phil. Icon. II. 11. p. 86. Helix t. 7. f. 10.

Habitat in tota Lusitania, frequentissima prope Cintra; var. major, magis globulosa, diaphana in Algarbia.

Obs. Nomen *H. Ponentinae* pessime formatum, nec adoptandum?

344. *H. carthusiana* Müller.

T. perforata, globoso-depressa, minute striata, corneo-albida, subpellucida; spira parum elata, plerumque mamillata; anfr. $5\frac{1}{2}$ vix convexiusculi, ultimus antice subdeflexus; apertura late lunaris, intus labiata; perist. acutum, subexpansum, rubellum, margine basali subrecto, columellari perforationem semitegente. — Diam. maj. 14, min. 11, alt. $7\frac{1}{2}$ mill. (Coll. Nr. 185. Spec. typ. frequentiss.)

β . Major, ad H. Cantianam prope accedens: diam. maj. $45\frac{2}{3}$, min. $43\frac{1}{2}$, alt. 10 mill. (Spec.)

γ . Minima: diam. maj. $9\frac{1}{2}$, min. $8\frac{1}{2}$, alt. 7 mill. (Spec.)

δ ? *Helix convexa* Arad. et Magg. cat. p. 70.*) — Philippi Sicil. II. p. 217. («Num satis differt ab *H. carthusianella*»?)

Habitat in Austria (et passim in Germania media), Illyria, Helvetia, Gallia, Lusitania, Britannia, Volhynia, Tauria, et in insulis maris mediterranei, var. β prope Monfalcone! Var. δ ? prope Castiglione in Aetna.

Obs. Varietates citatae strictè separari non possunt. Praeterea variat spira magis minusve prominula et umbilico majore vel omnino clauso.

345. *H. obstructa* Férussac.

T. subtus rimata, depressa, laevis, corneo-albida, subpellucida; spira planiuscula; anfr. $4\frac{1}{2}$, ultimus subdevians, prope aperturam albidus, margine rubello; apertura lunato-rotundata, intus albo-labiata; perist. simplex, margine columellari reflexiusculo. — Diam. maj. 12, min. $9\frac{2}{3}$, alt. 6 mill. (Coll. Nr. 186.)

Helix obstructa Fér. pr. p. 69 et Mus.!

Theba carthusiana Risso IV. p. 74.

Bradybaena Cantiana et *Brunonensis* Beck ind. p. 19.

Fruticicola carthusiana Held in Isis 1837. p. 914.

Habitat in Britannia, Illyria (!), Gallia meridionali, Italia.

* * *

347. H. Grayi Pfr.

T. subobteete umbilicata, globoso-depressa, tenuiuscula, striata et undique granulata, pallide fulvescens, sutura et area basali violaceo-caestaneis; spira parum elata; anfr. 5—5½ convexiuseuli, ultimus antice breviter deflexus; umbilicus angustus; apertura lunato-circularis, intus tenuiter roseo-labiata; perist. simplex, margine dextro recto, columellari dilatato, reflexo, roseo. — Diam. maj. 23, min. 19, alt. 15 mill. (Mus. Cuming.)

Helix ... Gray New Zeal. ined. t. 1. f. 8. 9.

— ... Pfr. Symb. III. p. 68.

Habitat in Australia orientali (Gilbert).

348. H. multistriata Deshayes.

T. perforata, depresso-globosa, tenuis, fragilis, translucida, cornea, striis regularibus concentricis ereberrimis notata; anfr. 5½ convexiuseuli, ultimus ad peripheriam obsolete angulatus et bиеinctus: cingulis angustis, contiguis, supero rufo, infero albido; apertura lunaris; perist. intus sublabiatum, margine supero expanso, basali dilatato, reflexo, foramen semitegente, prope columellam subdentato. — Diam. maj. 19, min. 16, alt. 11—12 mill. (Coll. Nr. 188.)

Fruticicola fruticum Held in Isis 1837. p. 914.

Eulota fruticum Hartm. Gast. I. p. 179. t. 63. 64.

β. Minor, tenuis, rosea, concentricae distinctius striata, anfractu ultimo circa umbilicum subangulato: diam. maj. 18, min. 16, alt. 12—13 mill. (Spec.)

Habitat in Germania, Gallia, Helvetia etc., sed non in Britannia; in Syria teste Férussac. Var. β legi ad Westerhof prope Göttingam.

Obs. Variat magnitudine, nec non spira magis minusve elevata.

350. *H. inchoata* Morelet. †

T. orbiculato-convexa, tenuis, perforata, corneo-lutescens vel avellanacea, saepius pellucida, interdum absque nitore; spira prominula; anfr. 7 subplani, striatuli, infimus fasciatus, subtus turgidulus; apertura subrotunda; labrum simplex, fragile [in adultis intus pone marginem labiatum]. — Amplit. 17—23 mill. (M.) — Diam. 23, alt. 17 mill. (ex ic.)

Helix inchoata Morelet moll. du Port. p. 70. t. 7. f. 1.

α. Avellanea subtus olivacea; ultimo anfractu 2 fasciis fusco-rubescens, luteo extrinsecus pallide marginatis, ornato.

β. Lutescens, fusco-rubescens unifasciata.

γ. Omnino lutea vel albicans.

Habitat frequens in tota Lusitania.

Obs. Differt ab *H. fruticum* anfractuum lentius accrescentium, planiorum numero, umbilico angustissimo, apertura magis ovali, etc. (M.)

351. *H. fruticola* Krynicki.

T. angustissime umbilicata, orbiculato-convexa, tenuiuseula, striata, albida; spira prominula, acutiuseula; anfr. 7 convexiusculi, ultimus antice valde deflexus; apertura obliqua, rotundato-lunaris; perist. rectum, acutum, intus anguste albo-labiatum, marginibus subconniventibus, columellari superne dilatato, fornicatim reflexo, umbilicum non pervium semitegente. — Diam. maj. 47, min. 44, alt. 44 mill. (Coll. Nr. 190.)

Helix fruticola Kryn. in Bull. Mosc. VI. p. 429. IX. p. 181. *)

— — Chemn. ed. II. *Helix* N. 624. t. 97. f. 17—19.

Habitat in Tauria meridionali. (Benevole communicavit Cl. de Middendorff.)

352. *H. despecta* Gray.

T. anguste umbilicata, subglobosa, tenuis, rugoso-striata, flavido-fusca; spira paululum elata; anfr. 5 convexi, ultimus inflatus; sutura profunda; apertura ampla, lunato-rotundata; perist. simplex, intus subincrassatum, margine columellari superne dilatato, reflexo, umbilicum semioccultante. — Diam. maj. 22, min. 19, alt. 47 mill. (Coll. Gray.)

Helix despecta Gray in Zool. of Beech. voy. p. 143. t. 38. f. 5.

Habitat Loo-Choo? (Gray.)

353. *H. Mighelsiana* Pfr.

T. umbilicata, globosa, solida, valide et confertim plicata, spiraliter obsolete striata, rufa vel lutescenti-fusca; spira conoideo-semiglobosa; anfr. 5 convexiusculi, ultimus ventrosus, antice vix descendens, circa umbilicum angustum compressus; apertura subverticalis, rotundato-lunaris; perist. rectum, albo-labiatum,

*) T. orbiculato-convexa, subglobosa, tenui, pellucida, transversim striata, sub epidermide sordide flavescendo lactea; anfr. 7 rotundatis; suturis profundiusculis; spira elevata; umbilico angusto; apertura rotundato-lunata, ad umbilicum subcoarctata; perist. subsimplici, intus linea eburnea incrassato. — Alt. $4\frac{1}{2}$, diam. $8\frac{1}{2}$ lin. — Ab *H. fruticum*, cui similis, distinguitur magnitudine minore, anfractuum numero, umbilico minus angustato, superficieque sine striis longitudinalibus. (Kryn. l. c.)

margine columellari dilatato-patente. — Diam. maj. 49, min. 46½, alt. 15 mill. (Mus. Cuming.)

Helix Mighelsiana Pfr. in Proc. Zool. Soc. 1846. p. 410.

Habitat prope Surigao insulae Mindanao.

354. *H. fodiens* Pfr.

T. umbilicata, subglobosa, tenuiuscula, diaphana, rufo-cornea, oblique confertim plicata; anfr. 5½ convexiusculi, ultimus subangulatus; umbilicus angustus, pervius; apertura lunato-subcircularis, intus nitide carnea; perist. subexpansum, intus sublabiatum, margine columellari dilatato, reflexo. — Diam. maj. 24, min. 18, alt. 15 mill. (Coll. Nr. 491.)

Helix fodiens Pfr. in Proc. Zool. Soc. 1845. p. 39.

— — *Phil. Icon.* I. 7. p. 154. t. 5. f. 40.

— — *Chemn. ed. II. Helix* N. 97. t. 17. f. 1. 2.

β. Minor, pallidior, anfr. 5: diam. maj. 19, alt. 12 mill. (Spec.)

γ. Testa tenui, striis longitudinalibus et spiralibus sub lente decussata, perist. subrecto.

Habitat in insula Luzon, α in prov. Iloconensi, β in prov. Cagayan, ubi semper terrae infossam legit Cl. Cuming; γ in insula Siquijor.

355. *H. Schuberti* Roth. †

T. globosa, ventricosa, perforata, foramine leviter oblecto et rimam aequante, tenuis, rufescens, minutissime longitudinaliter striata; anfr. 6 planiusculi; apertura lunata; perist. reflexum, albo-labiatum, marginibus approximatis. (R.) — Diam. maj. 48½, min. 46, alt. 14 mill. (ex ic.)

Helix Schuberti Roth diss. p. 15. t. 1. f. 1. 2.

Habitat in sepulcris necropoleos dictae Cacamo Cariae.

356. *H. tourannensis* Souleyet.

T. umbilicata, conico-globosa, livide cornea, distincte et confertim striata, subdiaphana; anfr. 6 convexi, ultimus basi inflatus; umbilicus angustissimus, vix pervius; apertura lunato-rotundata; perist. carcum, acutum, intus valide albo-labiatum, margine dextro expanso, columellari dilatato, reflexiusculo. — Diam. maj. 45, min. 44, alt. 13 mill. (Coll. Nr. 492.)

Helix tourannensis Soul. in Revue zool. 1842. p. 404.

— — *Chemn. ed. II. Helix* N. 96. t. 17. f. 3. 4.

— *globula* Lea obs. I. p. 170. t. 19. f. 70.

— *chusilis* Valenc. Mus. Paris.

Habitat in Cochinchina (Soul.), in China prope Canton (Lea).

Obs. Nomen a Cl. Valenciennes impositum ab epiphragmate calcareo, pone labium internum aperturam perfecte claudente.

357. *H. Ravergiensis* Férussac.

T. umbilicata, globoso-depressa; tenuis, subtiliter rugoso-striata, sub lente granulata, corneo-albida, pellucida, fascia lata subopaca albida ad suturam, angustiore alba ad peripheriam ornata; anfr. 6 convexiusculi, ultimus autice subdellexus; apertura lunato-rotundata; perist. acutum, expansum, intus callo albo, acuto labiatum, margine columellari dilatato, umbilicum angustum, pervium semitegente. — Diam. maj. 46, min. 43, alt. 40 mill. (Coll. Nr. 493.)

Helix Ravergiensis Fér. in Bull. zool. 1835. p. 24.

— — Chemn. ed. II. *Helix* N. 222. t. 65. f. 1. 2.

— *Ravergii* Kryn. Bull. Mosc. IX. p. 482.

— *limbata* Kryn. Bull. Mosc. VI. p. 431. Nec Drap.

— *caucasica* Pfr. in Proc. Zool. Soc. 1845. p. 134.

Habitat in Caucaso.

358. *H. berytensis* Férussac.

T. umbilicata, depresso-globosa, tenuis, subpellucida, luteo-fulvicans, minutissime granulata; anfr. 5½ planiusculi, ultimus magnus, obsolete angulatus; umbilicus angustus; apertura lunato-rotundata; perist. simplex, intus labiatum, margine columellari reflexo, basali et dextro vix expansis. — Diam. maj. 46, min. 44, alt. 40½ mill. (Coll. Nr. 494.)

Helix berytensis (Helicella) Fér. pr. 260 et Mus.!

— — Pfr. Symb. I. p. 39.

— — Chemn. ed. II. *Helix* N. 93. t. 17. f. 11. 12.

— *granulata* Roth diss. p. 46. t. 4. f. 3. Nec Quoy.

Habitat in Syria, prope Berytum (Fér.), Cacamo (Roth).

359. *H. Rissoana* Pfr.

T. perforata, globosa, tenuis, striata, diaphana, vix nitida, rufa; spira conoidea, obtusiuscula; anfr. 6 convexiusculi, ultimus subangulatus, medio pallide cingulatus, antice breviter descendens, basi ventrosus; apertura magna, semicircularis; perist. intus rubello-labiatum, breviter expansum, margine columellari in laminam brevem, perforationem semioccurrentem, reflexo. — Diam. maj. 48, min. 45½, alt. 43 mill. (Mus. Cuming.)

Helix Rissoana Pfr. in Proc. Zool. Soc. 1846. p. 110.

Habitat in Graccia.

360. *H. incarnata* Müller.

T. perforata, depresso-globosa, leviter carinata, tenuis, opaca, pruinosa, rufescens, pellucide unifasciata, minutissime

granulata; anfr. 6 convexiusculi, ultimus antice deflexus; apertura lunaris; perist. acutum, subreflexum, extus rufescens, intus labio incarnato, marginem non attingente, munitum. — Diam. maj. 16, min. $14\frac{1}{2}$, alt. $9\frac{1}{2}$ mill. (Coll. Nr. 195.)

Helix incarnata Müll. verm. II. p. 63. N. 259.

— — Chemn. IX. P. 2. p. 151. t. 133. f. 1206.

— *sylvestris* Hartm. Neue Alpina I. p. 240.

— Fér. hist. Livr. 34. t. 4. f. 20—22.

Monacha incarnata Fitzing. syst. Verz. p. 95.

Bradybaena incarnata Beck ind. p. 20.

Fruticicola incarnata Held in Isis 1837. p. 914.

β. Minor, umbilico fere prorsus obtecto:

Helix tecta Zgl. Mus.

γ. Solidior, opaca, aperturae margine basali strictiusculo:

Helix Welebitana Stentz in sched.

Habitat in Germania, Gallia, Suecia etc., non in Britannia.

361. *H. vicina* Rossmässler.

T. obtecte subperforata, depresso-globosa, corneo-lutescens, medio pellucide leucozona, granulato-alutacea; anfr. 6 vix convexiusculi, ultimus antice breviter descendens, basi medio impressus; apertura perobliqua, rotundato-lunaris; perist. patulum, albo-labiatum, margine columellari breviter dilatato, adnato, basali angulatim reflexo. — Diam. maj. $12\frac{1}{2}$, min. $11\frac{1}{3}$, alt. 8 mill. (Spec. coll. Rossm.)

Helix vicina Rossm. XI. p. 3. f. 689.

— — Chemn. ed. II. Helix N. 223. t. 63. f. 3. 4.

— *carpathica* Friv. ined. (teste Rm.)

Habitat in montibus Carpathicis (Frivaldsky).

362. *H. limbata* Draparnaud.

T. subobtecte perforata, depresso-globosa, subtilissime striata, pellucide corneo-lutescens, ad peripheriam subcarinata: carina alba, opaca; anfr. 6 planiusculi, ultimus antice non descendens; apertura lunaris; perist. reflexiusculum, leviter labiatum, margine columellari breviter dilatato, perforationem semitegente. — Diam. maj. 15, min. 13, alt. 9 mill. (Coll. Nr. 196.)

Helix limbata Drap. p. 100. t. 6. f. 29.

Bradybaena limbata Beck ind. p. 48.

Fruticicola limbata Held in Isis 1837. p. 914.

Habitat in Gallia meridionali! et in Anglia?

363. H. consona Ziegler.

T. obtecte perforata, depresso-globosa, lutescenti-cornea, fascia intermedia pellucida, leviter striata, nitidula, pellucida; anfr. $5\frac{1}{2}$ convexiusculi, ultimus antice vix descendens; apertura lato lunaris; perist. rectum, acutum, intus albo-labiatum, marginibus remotis, columellari dilatato, perforationem angustam fere obtegente. — Diam. maj. $44\frac{1}{2}$, min. 43, alt. $9\frac{1}{2}$ mill. (Coll. Nr. 497.)

Helix consona Zgl. Mus. Rossm. IX. p. 8. f. 572. 73.

— — Phil. Sicil. II. p. 406.

— — Chemn. ed. II. Helix N. 625. t. 97. f. 20—22.

— *ursula* Fér. Mus. Paris.?

Bradybaena consona Beck ind. p. 20.

Fruticicola consona Held in Isis 1837. p. 914.

Habitat in Sicilia.

364. H. plebeja Draparnaud.

T. subobtecte perforata, globoso-depressa, cornea, hirta, carina obtusa albo-pellucida; anfr. 6 vix convexiusculi; apertura lunaris; perist. reflexiusculum, albido-labiatum. — Diam. maj. 44, min. 41, alt. 9 mill. (Coll. Nr. 498.)

Helix plebejum Drap. p. 405. t. 7. f. 5.

— — Lam. ed. Dh. 98. p. 72.

Bradybaena hurida Beck ind. p. 20.

β. Minor, tenera, opaca, perist. acuto, labio angustiore: diam. maj. $40\frac{1}{2}$, min. 9, alt. $6\frac{1}{2}$ mill. (Spec.)

Helix hurida var. Rossm. VII. p. 4. f. 437.

— *separanda* et *pterididea* Zgl. Mus.

Bradybaena plebeja Beck ind. p. 20.

Habitat in Carniolia rarior; var. β in Carniolia, provincia Austriae littorali et in monte Jura (Drap.).

Obs. 1. Etsi specimina Draparnaudiana in Mus. Caes. Vindobonensi servata ad *H. rufescentem* spectent, tamen ex icone et descriptione auctoris dubitare non possum, var. minorem *H. luridae* Zgl. veram esse *H. plebejam* Drap.

Obs. 2. *H. plebeja* Kryn. (Bull. Mosc. VI. p. 430.) pertinet ad *H. strigellam*.

365. *H. flicina* Schmidt.

T. perforata, depresso-globosa, pellucida, purpurascens, cornea, pilis brevissimis sparsis obsita; anfr. 6 lente accrescentes, ultimus albido-cingulatus; umbilicus angustus, apertus; apertura lunaris; perist. intus roseo-labiatum, margine columellari reflexiusculo. — Diam. maj. 9, min. $8\frac{1}{2}$, alt. 5 mill. (Coll. Nr. 199.)

Helix flicina Schmidt Mus. Pfr. Symb. I. p. 39.

— — Chemn. ed. II. *Helix* N. 638. t. 98. f. 34. 32.

Habitat in Carniolia (Schmidt).

Obs. Peraffinis *H. luridae* β Rossm.; distingui tamen potest colore, forma minus depressa, anfractibus angustioribus, umbilico, etc.

366. *H. rufescens* Pennant.

T. umbilicata, subgloboso-depressa, subcarinata, striatula, pallide rufescens; spira parum elata; anfr. 6 convexiusculi, ultimus albido-cingulatus, antice non deflexus; apertura ovato-lunaris; perist. patulum, remote albo-labiatum, margine columellari reflexiusculo. — Diam. maj. 11, min. 10, alt. 6 mill. (Coll. Nr. 200. Spec. Vindobon.)

Helix rufescens Pennant Britt. Zool. f. 34.

Helicella strigella Fitzing. syst. Verz. p. 95.

Bradybaena strigella Beck ind. p. 19.

Fruticieola strigella Held in Isis 1837. p. 914.

β. Major: diam. maj. $18\frac{1}{2}$, min. 16, alt. 11 mill.

γ. Minor, tenera, pallida:

Helix strigella var. Rossm. VII. p. 4. f. 438.

δ. Minor, subglobosa, angustius umbilicata: diam. maj. 13, min. 11, alt. $8\frac{1}{2}$ mill. (Spec.)

ε. Minima: diam. maj. $11\frac{1}{2}$, min. 10, alt. $6\frac{2}{3}$ mill. (Coll. Forbes.)

ζ. Angustius umbilicata: diam. maj. 14, min. 12, alt. 9 mill. (Mus. Cuming.)

η. Diaphana:

Helix vitrinosa Zgl.? (Beck.)

θ. Juvenis:

Helix piligera Andr. (teste Kryn.)

Habitat in Hassia, Saxonia, Silesia, Bavaria, Austria, Styria, Carinthia, Gallia, Helvetia, Hispania, Rossia, Caucaso; var. β in Transylvania, γ prope Dresdam (Rm.), δ prope Griffen in valle Lavantae Carinthiae (!), ε in insula Patmos (Forbes), ζ ad Candahar Indiae orientalis (Benson).

369. *H. Orsinii* Porro. †

T. duriuscula, aperte umbilicata, depressa, leviter striata, supra alba, fascia unica cornea aut coffaea ornata, subtus omnino cornea vel coffaea; anfr. 6; umbilicus infundibuliformis; apertura ovata, oblongiuscula; perist. reflexiusculum, leviter labiatum, marginibus approximatis. — Diam. 12—18, alt. 6—9 mill. (Villa.)

Helix Orsinii Porro in Villa disp. syst. p. 54.

— — *Phil. Sicil.* II. p. 219.

Habitat in Italia meridionali (Porro); in Sicilia ad ripam Symaethi detexit Aradas.

Obs. Varietas videtur praecedentis.

370. *H. aristata* Krynicki. †

T. orbiculato-convexa, depressiuscula, tenuis, pellucida, transversim profunde striata, aculeis brevibus hispida, aut granulis rarioribus scabra, sordide brunnescenti-cornea; anfr. 6? plano-rotundati; suturae profundae; umbilicus mediocris, profun-

dus; apertura rotundato-lunata; perist. subsimplex, intus tenue marginatum. — Diam. 8''' (Kr.)

Helix aristata Kryn. in Bull. Mosc. IX. p. 179.

Habitat in Caucaso.

Obs. Species ex 1 specimine spira destituta descripta, quoad superficiem, formam externam et umbilicum ad *H. strigellam* accedens, testa aspera, granulis parce distributis et tota superficie, uti videtur, aristis brevibus, rigidis, rectis tecta, diversa. (Kr.)

371. *H. umbrosa* Partsch.

T. umbilicata, suborbiculato-depressa, obtuse carinata, tenuis, pellucida, cornea vel albido-lutescens, subtilissime granulata; anfr. 5 convexiusculi, ultimus vix deflexus; umbilicus infundibuliformis; apertura transverse ovalis; perist. intus tenuissime labiatum, simplex, expansum, marginibus approximatis. — Diam. maj. 13, min. 11, alt. 6½ mill. (Coll. Nr. 203.)

Helix umbrosa Partsch in Mus. Caes. Vindob.

— — C. Pfr. III. p. 27. t. 6. f. 7.

— — Rossm. I. p. 64. f. 13. VII. p. 1. f. 424. 25.

— — Chemn. ed. II. *Helix* N. 86. t. 16. f. 9—12.

— *concinna* a Jeffr. (teste Beck.)

Helicella umbrosa Fitzing. syst. Verz. p. 95.

Bradybaena umbrosa Beck ind. p. 20.

Fruticicola umbrosa Held in Isis 1837. p. 944.

Habitat in Austria (circa Vindobonam et Salisburgiam!), Bavaria (Berchtesgaden!), Saxonia (Tharand: Rm.), Carinthia, Styria.

372. *H. flavida* Ziegler.

T. aperte umbilicata, depressa, suborbiculata, arctispira, flavida, eleganter striato-costulata; anfr. 6 convexi, lente accrescentes; apertura subverticalis, lunaris; perist. rectum, acutum, intus levissime callosum. — Diam. maj. 10, min. 9, alt. 5½ mill. (Coll. Nr. 204.)

Helix flavida Zgl. Mus. Rossm. X. p. 13. f. 610.

— — Phil. Sicil. II. p. 106.

— — Chemn. ed. II. *Helix* N. 634. t. 98. f. 10—12.

— *flavescens* Purr. in sched.

— *striolata* Phil. Sicil. I. p. 129. Nec C. Pfr.

Habitat in Sicilia, in monte Pellegrino prope Panormum (Phil.).

373. *H. bifrons* Lowe.

T. umbilicata, orbiculato-convexiuscula, subcarinata, tenuis, nitida, concolor cornco-virescens, infra laeviuscula, obsolete striata, supra costulato-striata; spira vix elevata; sutura distincta, impressa; anfr. 7—8 lente accrescentes, ultimus basi convexus;

umbilicus minutus, cylindricus, profundus; apertura lunaris; perist. simplex, tenue, acutum, intus latissime albo-labiatum. — Diam. 6 — 7, axis $2\frac{1}{2}$ — 3 lin. (Lowe.) — Diam. maj. 12, min. 10, alt. 5 mill. (Coll. Nr. 205.)

Helix bifrons Lowe Faun. Mader. p. 46. t. 5. f. 18.

— — Chemn. ed. II. Helix N. 698. t. 111. f. 23 — 25.

Habitat in sylvis insulae Maderae.

374. *H. lentiginosa* Lowe. †

T. rotundato-depressa, infra subplanulata, umbilicata, subcarinata, tenuis, maculata et subfasciata; spira convexo-depressa; sutura distincta; anfr. 5 convexiusculi, striato-scobinati vel squamuloso-cancellati; umbilicus mediocris, subpatulus, spiralis; apertura transverse ovalis, sublunata; perist. interruptum, reflexum. — Axis $1\frac{1}{2}$, diam. $2\frac{1}{2}$ — 3 lin. (Lowe.)

Helix lentiginosa Lowe Faun. Mader. p. 49. t. 5. f. 25. (auct.)

Ochthephila lentiginosa Beck ind. p. 17.

Habitat in Maderae rupibus maritimis.

Obs. «H. arridenti affinis».

375. *H. lanuginosa* Boissy.

T. perforata, globoso-depressa, lutescenti-cornea, hispida, opaca, levissime subcarinata; apex glaber papillatus; anfr. $5\frac{1}{2}$ planiusculi; apertura rotundato-lunaris; perist. subpatulum, acutum, intus levissime callosum, roseum, margine columellari reflexo. — Diam. maj. 14, min. 12, alt. 9 mill. (Coll. Nr. 206.)

Helix lanuginosa Boissy in Guér. mag. 1835. t. 69.

— — Terv. p. 22. t. 2. f. 16. 17.

— — Rossm. IX. p. 8. f. 574. 574.

— — Chemn. ed. II. Helix N. 630. t. 98. f. 7 — 9.

— *roseotincta* Forb. in Ann. mag. nat. hist. II. p. 250.

Habitat in insula Majorca, Palma (Boissy), circa Bugia, Oran, Bona, Constantine (Wagner, Terver, Forbes).

376. *H. sericea* Draparnaud.

T. perforata, subglobosa, cornea, pilis minutis, densis hirta; anfr. 5 convexiusculi, celeriter accrescentes; apertura late lunaris; perist. vix patulum, acutum, intus sublabiatum, margine columellari reflexiusculo, perforationem semitegente. — Diam. maj. 7, min. 6, alt. 4 mill. (Coll. Nr. 207.)

Helix sericea Drap. p. 103. t. 7. f. 16. 17.

— — Lam. ed. Dh. 117. p. 82.

— — Kryn. Bull. Mosc. IX. p. 186.

— — Rossm. VII. p. 2. f. 428.

— — Chemn. ed. II. Helix N. 636. t. 98. f. 25. 26.

— *palleseens* et *rubiginosa* Zgl.

— *piligera* Zgl. (Anton.)

Monacha sericea Filz. syst. Verz. p. 95.

Fruticicola sericea Held in Isis 1837. p. 914.

β. Testa pallidissime cornea, apertura paulo depressiore: diam. maj. $7\frac{1}{2}$, min. $6\frac{1}{2}$, alt. 5 mill. (Spec.)

Helix granulata Alder Mag. Zool. and Bot. II. p. 407.

— — Gray Man. p. 154. t. 3. f. 29.

— *hispida* Jeffr. Linn. transact. XVI. p. 507.

— *sericea* var. Chemn. l. c. t. 99. f. 16—18.

γ. Major:

Helix sericea var. Rossm. VII. f. 429.

Habitat in Germania, Gallia, Helvetia, Anglia etc., Rossia, Caucaso; var. β in Britannia, Hibernia.

377. *H. ciliata* Venetz.

T. perforata, globoso-depressa, carinata, cornea, opaca, squamulis membranaceis transversim dispositis aspera; carina membranaceo-ciliata; anfr. $4\frac{1}{2}$ —5 planiusculi; apertura lunato-ovalis; perist. reflexiusculum, fuscule-sublabiatum. — Diam. maj. $8\frac{1}{2}$, min. $7\frac{1}{2}$, alt. 5 mill. (Coll. Nr. 208.)

Helix ciliata Venetz in Stud. syst. Verz. p. 86.

— — Mich. compl. p. 23. t. 14. f. 27.

— — Lam. ed. Dh. 115. p. 81.

Helix hispida Risso IV. p. 72.

Bradybaena ciliata Beck ind. p. 20.

Habitat in alpibus Helvetiae et Tyroliae, β prope Como.

779 *Hel. aprica* Krauss. Zs. 1848. p. 114.

378. *H. actinophora* Lowc. †

T. orbiculata, depressa, basi convexior, subturgida, tenuis, unicolor, fusco-rufescens, acute carinata; spira convexiusculo-depressa, subplanulata; sutura distincta; anfr. 5 planati, striis creberrimis, tenuissimis, transversim undulatum laminosis, quibusdam ad carinam suturamve in laminas breves, membranaceas, lacinulasque acutas, radiantes, productis notati; umbilicus spiralis, parvus; apertura transversa, rotundato-ovalis, sublunata;

perist. interruptum, acutum, patulum, reflexum. — Diam. 4, axis 2 lin. (Lowe.) — Diam. $9\frac{1}{2}$, alt. $5\frac{1}{2}$ mill. (ex ic.)

Helix actinophora Lowe Faun. Mader. p. 45. t. 5. f. 14.

— — Lam. ed. Dh. 203. p. 125.

Ochthephila actinophora Beck ind. p. 18.

Habitat in Maderae sylvis.

379. *H. jejuna* Say. †

T. anguste umbilicata, subglobosa, glabra, pallide rufa; spira convexa; sutura impressa; anfr. 5 substriati, convexi; apertura late lunaris; labrum non reflexum, intus subincrassatum. — Diam. $\frac{1}{5}$ poll. (Say.)

Helix jejuna Say in Philad. journ. II. p. 158.

Habitat in Florida orientali.

Obs. «Affinis *H. sericeae*, sed glabra».

380. *H. glabella* Draparnaud.

T. umbilicata, subdepressa, glabra, nitida, cornea; anfr. 5 — $5\frac{1}{2}$ planiusculi, sensim accrescentes, ultimus obsolete angulatus, linea pallida circumdatus, antice subdeflexus; umbilicus angustus, pervius; apertura rotundato-lunaris; perist. rectum, acutum, intus sublabiatus, margine columellari reflexiusculo. — Diam. maj. $9\frac{1}{2}$, min. 9, alt. 5 mill. (Coll. Nr. 209. Spèc. gall.)

Helix glabella Drap. p. 102. t. 7. f. 6.

— — Lam. ed. Dh. 116. p. 82.

— — C. Pfr. I. p. 34. t. 2. f. 16?

— — Chemn. ed. II. *Helix* N. 633. t. 98. f. 16—18.

— *sericea* var. Rossm. VII. p. 2.

Helicella plebejum Fitz. syst. Verz. p. 96?

Bradybaena glabella Beck ind. p. 20.

Fruticicola glabella Held in Isis 1837. p. 914.

Habitat in Gallia, rarissima in Germania.

Obs. Differt ab *H. sericea* testa cornea, epilata, spira depressa. etc. Umbilicus multo major, quam in *sericea*, minor, quam in hispida.

381. *H. pallidula* Pfr.

T. umbilicata, depressa, tenuis, pellucida, confertim striata, pallide cornea; anfr. $5\frac{1}{2}$ convexiusculi, ultimus latior, depressus; apertura obliqua, late lunaris; perist. rectum, intus sublabiatus, margine columellari brevi, ad umbilicum angustum, in fundo coarctatum, dilatato-reflexo. — Diam. maj. 40, min. $8\frac{2}{3}$, alt. 5 mill. (Coll. N. 210.)

Helix pallidula Pfr. in Zeitschr. f. Mal. 1846. p. 128.

Helix pallidula Chemn. ed. II. *Helix* N. 632. t. 98. f. 13—15.

Habitare dicitur in Chile.

Obs. Persimilis *H. glabellae*, umbilico latiore et apertura lata lunari praecipue diversa.

382. *H. depilata* C. Pfr.

T. umbilicata, subgloboso-depressa, striata, nitida, cornea; anfr. 6 angusti, convexi, ultimus obsolete angulatus, linea pallida circumdatus; umbilicus majusculus, pervius; apertura depressa, lunaris; perist. rectum, acutum, intus albo-labiatum, margine basali stricto, cum columellari brevissimo angulum formante. — Diam. maj. 8, min. 7, alt. 4 mill. (Coll. Nr. 244.)

Helix depilata C. Pfr. I. p. 35. t. 2. f. 18.

— — *Kryn. Bull. Mosc. IX.* p. 187?

Helix hispidula Jan Mantissa p. 2. *)

— *villosula* Zgl. Mus.?

Habitat frequens in Germania, Gallia, Suecia, Volhynia, Tauria etc.

384. *H. Lowei* Potiez et Michaud. †

T. orbicularis, depressa, striata, umbilicata, solida, corneofusca, albido-maculata, maculis longitudinaliter irregulariterque sparsis, brunneo-fasciata; anfr. 5 convexi; sutura profunda; apertura subrotunda, acuta; infima facies convexa, striata. — Diam. 7—8, alt. 4 mill. (P. et M.)

Helix Lowei Pot. et Mich. gal. de Douai I. p. 94.

Habitat in insula Madera.

Obs. «Similis *H. conspurcatae*». (Conf. Nr. 439.)

385. *H. Tennesensis* Lea. †

T. supra plano-convexa, subtus convexa, lutea, oblique striata, umbilicata; spira brevis; sutura subimpressa; anfr. 5 subconvexi; apertura lunata; labrum intus incrassatum. (Lea.) — Mensura?

Helix Tennesensis Lea in Proc. Am. ph. Soc. 1844. II. p. 34.

Habitat in montibus Cumberlandianis: Tennessee.

§. 27.

386. *H. leucozona* Ziegler.

T. perforata vel umbilicata; turbinato-subglobosa, dilute rufo-fusca, pellucide ciugulata, subtiliter striata; anfr. 5—6 convexiusculi, ultimus non descendens; apertura lunaris, subdepressa; perist. vix patulum, exacte albo-labiatum, margine basali stricto. — Diam. maj. 12, min. 10½, alt. 7 mill. (Coll. Nr. 243. Spec. max.)

Helix leucozona Zgl. Mus. C. Pfr. III. p. 34. t. 6. f. 19. 20.

— — Rossm. VII. p. 3. f. 434—36.

— — Chemn. ed. II. *Helix* N. 642. t. 99. f. 10—12.
22—24.

— *dolopida* Jan Mantissa p. 4.

Petasia dolopidia Beck ind. p. 24.

Trochiscus dolopidus Held in Isis 1837. p. 945.

*) T. subconica, umbilicata, diaphana, brunnea, hirta (2½" alt, 2" lata); apertura lunari; perist. simplici. (Jan l. c.) — Ital. bor.

β . Umbilico paulo apertiore:

Helix crassilabris Mlf. (test. spec. coll. Anton.)

Habitat in Carinthia, Carniolia, provincia Austriae littorali et Italia boreali.

Obs. Pervariabilis quoad magnitudinem, spiram magis minusve elevatam et umbilici latitudinem.

387. *H. liminifera* Held. †

T. subdepressa, arete umbilicata, cornea, badia, hispida, subcarinata: carina albida; apertura semilunaris, perdepressa; perist. subreflexum, intus toro eminente instructum. — Alt. $4\frac{1}{2}$, lat. $2\frac{3}{4}$ lin. (H.)

Helix liminifera Held in Isis 1836. p. 273.

Trochiscus liminiferus Held in Isis 1837. p. 915.

Habitat in alpinis Bavariae.

Obs. An varietas praecedentis?

388. *H. bounoboena* Orbigny. †

T. orbiculato-convexa, umbilicata, diaphana, tenuis, laevigata, lucida, albida; spira convexa; anfr. 6; apertura subdepressa, obliqua; labrum crassum. — Long. $4\frac{3}{4}$, lat. 8 mill. (O.)

Helix bounoboena (Helicella) Orb. synops. p. 7.

— — Orb. voy. p. 253. t. 28. f. 17—20.

Artemon bunobaenus Beck ind. p. 48.

Habitat in provincia Chiquitensi Boliviae.

389. *H. hylephila* Orbigny. †

T. orbiculato-convexa, umbilicata, diaphana, albida, striata, subtus laevigata, lucida; spira subconica; anfr. 6; apex obtusus; apertura subrotunda, obliqua; labrum crassum. — Long. 5, lat. 8 mill. (O.)

Helix hylephila (Helicella) Orb. syn. p. 7.

— — Orb. voy. p. 253. t. 28. f. 13—16.

Artemon hylephilus Beck ind. p. 48.

β . Minor: long. $3\frac{1}{2}$, lat. 6 mill.

Helix ochthephila Orb. synops. p. 7.

Habitat in prov. Chiquitensi Boliviae, β in prov. Missionum, ripis Paranae.

Obs. Locum huic speciei et antecedenti, mihi solum ex iconibus cognitis, assignatum, aptissimum non esse ex Cl. Beck distributione suspicor.

390. *H. Cobresiana* Alten.

T. perforata, conoideo-globosa, cornea, multispira, pubescens; anfr. 6, ultimus albido-cingulatus; apertura depressa,

lunaris; perist. patulum, intus labiatum, margine basali unidentato. — Diam. maj. 40, min. 9, alt. $5\frac{1}{2}$ mill. (Coll. Nr. 214.)

Helix Cobresiana v. *Allen* p. 79. t. 9. f. 18.

— — *Chemn.* ed. II. *Helix* N. 641. t. 99. f. 7—9.

— *unidentata* *Drap.* p. 81. t. 7. f. 15. Nec *Chemn.*

Trochiscus unidentatus *Held* in *Isis* 1837. p. 915.

β . *Spira* elatiore, dente basali obsoleto:

Helix edentula *Drap.* p. 80. t. 7. f. 44.

— *Cobresiana* var. *Chemn.* l. c. t. 99. f. 13—15.

γ . Minor, latius umbilicata:

Helix unidens *Zgl.* Mus.

Petasia unidens *Beck* ind. p. 21.

δ ? Depressa, forma aperturæ ad II. leucozonam accedens, anfractibus angustissimis Cobresianæ: diam. maj. 7, min. 6, alt. 4 mill. (Spec.)

Helix Cobresiana var.? *Chemn.* ed. II. *Helix* t. 99. f. 19—21.

Habitat in Germania, Gallia, Italia passim, γ in summis alpidibus, δ in valle «Mürzthal» Styriæ.

391. *H. bidens* (*Trochus*) *Chemnitz.*

T. obtecte perforata, turbinato-globosa, cornea, pellucide cingulata, superne eleganter costulato-striata, multispira; anfr. 6—7 vix convexiusculi; apertura depressa, trisinuato-lunaris; perist. subreflexum, albo-vel rufo-labiatum, basi intus bidentatum, extus scrobiculatum. — Diam. maj. 9, min. $8\frac{1}{2}$, alt. 6 mill. (Coll. Nr. 215.)

Trochus bidens *Chemn.* IX. P. 2. p. 50. t. 122. f. 1052 α , β .

Petasia fulva Beck ind. p. 24.

Trochiscus bidentatus Held in Isis 1837. p. 945.

β. Major: diam. maj. 42, min. 44, alt. 9 mill.

Helix bidentata major Rossm. VII. p. 3: f. 434.

— *bidens* Zgl. Mus.

— *diodon* Parr. in sched.

Petasia bidens Beck ind. p. 24.

Habitat rarior in Germania, Gallia, Suecia, Volhynia.

Obs. Hanc speciem Cl. Beck veram *H. fulvam* Müll. (verm. II. N. 249). esse asserit, licet Müllerus etiam in specimine adulto dentes non observaverit.

392. *H. infrendens* Gould.

T. orbiculata, depresso-conoidea, cornuco-virescens, subearinata, supra rugoso-striata, subtus glabra, nitida, regione umbilicali excavata; anfr. 7 convexiusculi; sutura impressa; apertura coarctata; labrum vix reflexum, callosum, margine basali sinuato, dentibus 2 complanatis majoribus, nonnullisque minoribus munito. — Diam. maj. 44, min. 40, alt. 5 $\frac{2}{3}$ mill. (Mus. Cuming.)

Helix infrendens Gould in Bost. journ. IV. p. 453. t. 24. f. 6.

— — Chemn. ed. II. *Helix* N. 639. t. 99. f. 4—3.

Habitat in provincia Tavoy imperii Birmani.

Obs. Conf. *H. triaria* Nr. 4070 et labyrinthica Nr. 4083.

§. 28.

393. *H. areolata* Sowerby.

T. perforata, orbiculato-conoidea, striata, nitidula, alba, lineis fuscis, interruptis varie ornata; spira depresso-conoidea; anfr. 5 convexiusculi, ultimus vix descendens, basi parum convexus; apertura rotundato-lunaris, intus fuscescens; perist. acutum, intus sublabiatum, margine columellari breviter arcuato, unidentato, dilatato, reflexo, perforationem fere tegente. — Diam. maj. 26, min. 23, alt. 18 mill. (Coll. Nr. 246.)

Helix areolata Sow. in Mus. Britt.

— — Pfr. in Zeitschr. f. Mal. 1845. p. 154.

— — Phil. Icon. II. 45. p. 184. t. 9. f. 4.

— — Chemn. ed. II. *Helix* N. 226. t. 36. f. 40—12.

β Dente aperturæ obsoleto.

γ. Minor, globosa, dente aperturæ valido:

Helix areolata var. Chemn. l. c. t. 36. f. 43.

Habitat in California ad Columbia River (Hinds).

394. *H. pisana* Müller.

T. angustissime perforata, subglobosa, albido-lutescens, spiraliter subtilissime lineata, diversissime castaneo-fasciata et

tacniata; anfr. 5 convexi; apertura dilatato-lunaris; perist. rectum, rosco-labiatum, margine columellari reflexo. — Diam. maj. 20, min. 18, alt. 14 mill. (Coll. Nr. 217.)

Helix pisana Müll. verm. II, p. 60. N. 255.

— — Lam. 61. p. 82. ed. Dh. p. 57.

Euparypha rhodostoma Hartm. Gast. I. p. 204. t. 79. 80.

Descript. de l'Egypte, Zool. II. t. 2. f. 14—16.

β. Major, testa sphaeroidea.

Helix pisana var. Rossm. X. p. 15. f. 614.

γ. Minor, subdepressa, umbilico subclauso:

Helix alboranensis Webb et Berth. (teste Beck.)

— *pisana* var. Chemn. ed. II. Helix t. 37. f. 4—12.

δ. Minor, sphaeroidea, umbilico oblitterato:

Helix sardoa Zgl.

ε. Alba, periomphalo roseo vel fusco:

Helix albina Zgl.

ζ. Junior, carinata:

Helix albina Müll. verm. II. p. 25. N. 226? (Conf. Nr. 1093.)

— *leucas* Linn.? (Conf. Nr. 1115.)

Carocolla Cinae Menke synops.?

Habitat in littoribus maris Mediterranei, Adriatici, etc., nec non in Anglia; var. β in Lusitania, γ in maritimis ins. canar. et Maderae, δ in Sardinia, ε in Dalmatia et Algeria prope Oran.

395. H. Dehnei Rossmäessler.

T. imperforata, subglobosa, solidula, subtilissime reticulata, alba, superne fascia 1 latiuscula, subtus angustioribus pluribus lutco-fuscis ornata; spira brevis, plane fornicata; anfr. 5 planiusculi, ultimus ad peripheriam obtuse angulatus, antice parum descendens, basi inflatus; apertura subverticalis, depressa, lunaris, intus cum fauce rosea; perist. rectum, intus rubello-labiatum, margine supero brevi, basali subhorizontali, columellari dilatato,

reflexo-appresso. — Diam. maj. 48, min. 45½, alt. 43 mill. (Coll. Nr. 248.)

Helix Dehnei Rossm. in Zeitschr. f. Mal. 1846. p. 473.

— — Chemn. ed. II. Helix N. 229. t. 36. f. 22—24.

Habitat in Africa? Invenit Dr. Decline inter Gummi arabicum.

396. *H. subdentata* Férussac.

T. obtecte perforata, globosa, solida, striatula, sub lente minutissime decussata, alba vel fusco-lineolata; anfr. 5, summi planiusculi, ultimus rotundatus, basi convexus; columella brevissima, rectiuscula; apertura late lunaris, intus cum fauce unidentata rosea; perist. rectum, intus remote et crasse labiatum, fuscum, marginibus callo fusco junctis. — Diam. maj. 49, min. 46, alt. 44 mill. (Mus. Cuming.)

— — Voigt in Cuvier Thierr. III. p. 56.

Theba subdentata Beck ind. p. 45.

β. Juvenis:

Carocolla Cinae Klett, Mke synops. p. 24?

Chemn. IX. f. 1105?

Habitat in Persia? (Fér.)

397. *H. Seetzeni* Koch.

T. angustissime perforata, depresso-globosa, solidula, cretacea, striata; spira parum clata, vertice subtili; anfr. 5½ convexiusculi, ultimus ventrosus, antice parum descendens; apertura lunari-subcircularis, intus alba; perist. rectum, acutum, intus labiatum, marginibus convergentibus, columellari subdilatato, valde arcuato. — Diam. maj. 49½, min. 47, alt. 43 mill. (Coll. Nr. 249.)

Helix Seetzeni Koch in Zeitschr. f. Mal. 1847. p. 44.

— — Chemn. ed. II. Helix N. 231. t. 37. f. 43. 44.

Habitat in ora occidentali Maris mortui inter Dschidda et Jericho, ubi legit def. Seetzen.

398. *H. levis* Pfr.

T. perforata, globosa, tenuis, levis, oblique striata, obsolete granulata, albida, punctis seriatis vel fasciis pellucide corneis varie ornata; spira brevis, acutiuscula; anfr. 5 vix convexiusculi, ultimus inflatus; apertura rotundato-lunaris, intus concolor vel fulvida; perist. acutum, intus sublabiatum, margine columellari

superne dilatato, fornicatim reflexo, perforationem fere tegente.
— Diam. maj. 16, min. 14, alt. 13 mill. (Coll. Nr. 220.)

Helix levis Pfr. in Zeitschr. f. Mal. 1845. p. 152.

— — Chemn. ed. II. Helix N. 228. t. 36. f. 16. 17.

β. Margine columellari dente unico, obtuso, calloso instructo.

Habitat in California ad Columbia River.

399. *H. decorata* Pfr.

T. perforata, depresso-globosa, tenuis, striatula, albida, taeniis variis interruptis castaneis, interdum confluentibus decorata; spira brevis, obtusa; anfr. $4\frac{1}{2}$ convexi, ultimus descendens; apertura rotundato-lunaris, intus livido-fusca; perist. acutum, intus vix labiatum, margine columellari membranaceo, dilatato, fornicatim reflexo. — Diam. maj. 18, min. 16, alt. 12 mill. (Coll. Nr. 224.)

Helix decorata Pfr. Symb. III. p. 69.

— — Chemn. ed. II. Helix N. 227. t. 36. f. 14. 15.

Habitat ... ?

400. *H. globuloidea* Terver. †

T. umbilicata, subglobosa, alba, aliquando fasciata, vel grisea, minutissime striata; anfr. 6, ultimus planulatus; apertura rotundata; perist. marginatum, acutum; spira obtusa, vertice nudo, fusco. — Diam. 10, alt. 5 lin. (T.) — Diam. maj. 22, min. 19, alt. 15 mill. (ex ic.)

Helix globuloidea Terv. cat. p. 126. t. 3. f. 5—7.

Habitat in Algeria.

401. *H. turbinata* Jan.

T. perforata, conico-globosa, solidiuscula, minute striata, alba, fasciis et flammulis fuscis variegata; anfr. $5\frac{1}{2}$ convexiusculi, ultimus inflatus; apertura lunato-rotundata; perist. simplex, intus labiatum, margine columellari subreflexo, perforationem angustissimam semitegente. — Diam. maj. $14\frac{1}{2}$, min. 10, alt. $9\frac{1}{2}$ mill. (Coll. Nr. 222.)

Helix turbinata Jan Mantissa p. 2.

— — Chemn. ed. II. Helix N. 235. t. 37. f. 17. 18.

Habitat in Sicilia (Jan)? In insula Syra (Spratt, Forbes)!

402. *H. pellucens* Shuttleworth.

T. perforata, conoideo-globosa, tenuis, oblique confertissime striata, diaphana, pallide fulvenscens, lineis et fasciis saturatioribus, saepe interruptis ornata; spira conoidea, acutiuscula; anfr. 6 convexiusculi, ultimus antice non descendens, basi ventrosus; aper-

tura lunato-circularis; perist. acutum, intus sublabiatur, margine columellari membranaceo, breviter reflexo. — Diam. maj. $12\frac{2}{3}$, min. 11, alt. 9 mill. (Mus. Cuming.)

Helix pellucens Shuttl. in sched. Cum.

Habitat in insula Corsica.

403. *H. Roseti* Michaud.

T. perforata, semigloboso-conica, distincte costulato-striata, sordide albida, fascia 1 interrupta rufa et maculis fuscis seriatis ornata; spira elevata, conica; anfr. 6 convexiusculi, ultimus obsolete subangulatus, antice non descendens; apertura rotundato-lunaris; perist. acutum, rectum, intus sublabiatur, margine columellari subdilato, perforationem non occultante. — Diam. maj. $8\frac{1}{2}$, min. 8, alt. $6\frac{1}{2}$ mill. (Coll. Nr. 223.)

Helix Roseti Mich. cat. d. coq. d'Alg. p. 6. t. 4. f. 17. 18.

— — *Lam.* ed. Dh. 144. p. 94.

— — *Webb et Berth.* syn. p. 317.

— — *Orb. canar.* p. 62. t. 4. f. 32—34.

— — *Chemn.* ed. II. *Helix* N. 236. t. 37. f. 19. 20.

Theba Roseti Beck ind. p. 11.

β . *Hel. phalerata* Webb et Berth. syn. p. 325. (Orb.)

Habitat in Algeria, Morea et in insula Canaria.

404. *H. melanogramma* Jan. †

T. globosa, subperforata, alba, 10—12 lineis nigris circumdata; apertura lunato-ovata; perist. submarginatum. — Lat. 6, alt. $3\frac{1}{2}$ lin. Apert. diam. long. $3\frac{1}{2}$, transv. 3 lin. (Jan.)

Helix melanogramma Jan Mantissa p. 2.

Habitat in Sicilia meridionali.

405. *H. lemniscata* Webb et Berthelot.

T. obtecte perforata, turbinata, oblique distincte striata, fuscicula vel alba, rufo- vel nigricanti-fasciata: fasciis pluribus, saepe interruptis; spira elata, conica, apice acutiuscula; aufr. 6 planiusculi, ultimus non descendens, basi subplanulatus; apertura rotundato-lunaris; perist. rectum, intus fusco-sublabiatur, margine columellari brevi, subverticali, reflexiusculo, perforationem omnino tegente. — Diam. maj. 9, min. $8\frac{1}{2}$, alt. 7 mill. (Coll. Nr. 224.)

Helix lemniscata Webb et Berth. synops. p. 317.

— — *Orb. canar.* p. 64. t. 4. f. 23.

— — *Chemn.* ed. II. *Helix* N. 237. t. 38. f. 24—26.

Habitat in rupibus insulae Canariae, prope urbem Palmarum.

406. **H. Michaudi Deshayes.**

T. obtecte subperforata, globuloso-eonoidea, ruguloso-striata, nitida, fusco-albida, fasciis 3 castaneis ornata; spira elevata, obtusa; anfr. 7 planiusculi, ultimus basi vix convexior, antiee non descendens; apertura depressa, lata, lunaris; perist. acutum, intus labiatum, marginibus remotis, columellari brevi, subverticali, reflexo, perforationem angustissimam tegente. — Diam. maj. 6, min. $5\frac{3}{4}$, alt. $4\frac{3}{4}$ mill. (Coll. Nr. 225.) — Diam. usque 5—6 lin. (Dh.)

Helix Michaudi Desh. in Encycl. méth. II. p. 263. N. 144.

— — *Lam.* ed. Dh. 149. p. 98.

Theba Michaudi Beck ind. p. 11.

Obelus Michaudi Hartm. Gast. I. p. 167. t. 57. f. 1—3??

Habitat in summo caeumine montis Pieo de Facho insulae Portosancto (Lowe), Teneriffa (Desh.).

§. 29.

407. **H. subrostrata Férussac.**

T. umbilicata, conoideo-globosa, solida, confertim argute striata, alba, apice nitida, cornea; anfr. 6— $6\frac{1}{2}$ convexiusculi, lente accrescentes, ultimus antiee non deflexus, reliquis paulo major; umbilicus mediocris, pervius; apertura lunato-rotundata; perist. acutum, intus labiatum, marginibus eonniventibus, columellari subdilato. — Diam. maj. 18, min. 16, alt. 14 mill. (Coll. Nr. 226.)

Helix subrostrata (Helicella) Fér. pr. 287.

— — *Terv.* cat. p. 25. t. 3. f. 8.

— — *Chemn.* ed. II. *Helix* N. 232. t. 37. f. 15. 16.

β. Minor, interrupte fasciata: *Terv.* t. 3. f. 9.

Habitat in Hispania, Almeria (Fér.), Algeria, Mostaganem (*Terv.*).

408. **H. virgata Montagu.**

T. anguste umbilicata, depresso-turbinata, laevigata, albida vel sordide lutescens, fasciis fuscis, saepe interruptis, multimode ornata; spira subelevata, apice cornea; anfr. 5—6 convexiusculi, ultimus antiee vix descendens; apertura lunato-rotundata; perist. rectum, acutum, intus fusco-labiatum, marginibus eonniventibus, columellari dilatato, patente. — Diam. maj. 19, min. 17, alt. 12 mill. θ. Monstrosa, anfractibus distortis:

Helix elegans Brown in Wern. transact. VI. p. 528. t. 24. f. 9.

— *disjuncta* Turt. Conch. dict. 61. f. 63.

Habitat in littoribus europaeis: Britanniae, Galliae, Illyriae, Italiae, Dalmatiae, Siciliae, Hispaniae etc., nec non in Africa.

Obs. Huc referendae varietates in collectionibus dispersae sub nominibus:

H. aegyptiacae Parr., egregiae, festivae, decorae, multifariae, nebulosae, pustulosae Zgl., istriensis Mll., sionestae Hartm., Menkeanae Stentz, etc.

409. *H. cretica* Férussac.

T. umbilicata, depresso-globosa, oblique striatula, sordide alba, fasciis fuscis interruptis varie picta; anfr. 6 convexiusculi, sensim accrescentes; umbilicus medioeris, pervius; apertura lunato-rotundata; perist. acutum, rectum, intus tenuissime labiatum. — Diam. maj. 16, min. $14\frac{1}{2}$, alt. $10\frac{1}{2}$ mill. (Coll. Nr. 228.)

Helix cretica (Helicella) Fér. pr. 288 et Mus.!

— — Pfr. Symb. I. p. 40.

— — Chemn. ed. II. Helix N. 233. t. 37. f. 21. 22.

Habitat in insulis Candia, Rhodo, Naxo. (Fér.)

Obs. Differt ab *H. virgata* praesertim anfractibus lente crescentibus, peristomate simpliciusculo et umbilico latiore.

410. *H. simulata* Férussac.

T. perforata, globoso-turbinata, regulariter costulato-striata, albidula vel grisea, fusco vel spadiceo interrupte fasciata; spira conoidea, apice obtusa; anfr. 5 convexiusculi; apertura lunato-subcircularis; perist. acutum, intus labiatum, marginibus conniventibus, columellari vix reflexiusculo. — Diam. maj. 13, min. 12, alt. 10 mill. (Coll. Nr. 229.)

Helix simulata (Helicella) Fér. pr. 289 et Mus.!

— — Ehrenb. Symb. phys. *)

— — Webb et Berth. synopsis. p. 345.

— — Chemn. ed. II. Helix N. 234. t. 37. f. 23. 24.

Descr. de l'Egypte t. 2. f. 13.

Habitat in Syria, Egypto (Ehrenb.), ad littora Fuerteventurae et Lancerottae (Webb et Berth.).

411. *H. submaritima* Desmoulins.

T. umbilicata, depressa, suborbiculata, lutescenti-albida, subtile fuscule-variegata et fasciolata, subcarinata; spira convexa; anfr. $5\frac{1}{2}$ convexiusculi, ultimus vix descendens; apertura rotundato-lunata; perist. rectum, acutum, intus leviter labiatum. — Diam. maj. 14, min. $11\frac{1}{2}$, alt. $7\frac{1}{2}$ mill. (Coll. Nr. 230.)

Helix submaritima Desm. Rossm. IX. p. 8. f. 575.

Habitat in Africa boreali, Oran (Terv.).

412. *H. maritima* Draparnaud.

T. perforata, parva, conoideo-globosa, subcarinata, alba, fasciis et maculis striatis fuscis multimode varians; anfr. 5 planiusculi; apertura rotundato-lunata; perist. rectum, acutum,

*) T. subglohosa, umbilicata, subconiformi, fasciolata, striata; apertura subrotunda; perist. marginato, albo; anfract. 5 — $5\frac{1}{2}$ rotundatis. — Diam. 6, alt. 5 lin. (Ehrenb. l. c.)

fuscum, intus albo-labiatum. — Diam. maj. 9, min. 8, alt. $6\frac{3}{4}$ mill. (Coll. Nr. 231.) — Diam. maj. 11, min. $9\frac{1}{2}$, alt. 8 mill. (ex ic. Drap.)

Helix maritima Drap. p. 85. t. 5. f. 9. 10.

— — (Helicella) Fér. pr. 299.

— — Chemn. ed. II. Helix N. 135. t. 23. f. 1. 2.

Theba maritima Beck ind. p. 12.

Habitat in littore meridionali Galliae et in Teneriffa. (Webb et Berth. syn. p. 316.)

Obs. Inter varietates *H. virgatae* forsitan enumeranda foret.

413. *H. monilifera* Webb et Berthelqt. †

T. globosa, depressiuscula, subconica, obsolete striata, albocinerascens, fasciis angustis, interruptis, nigro-fuscis; anfr. 6; apertura suborbicularis; vertex acutiusculus. — Axis 2—3, diam. 3— $3\frac{1}{2}$ lin. (W. et B.)

Helix monilifera Webb et Berth. syn. p. 315.

— — Orb. canar. p. 61. t. 1. f. 21. 22.

Habitat in ora maritima insularum Canariae, Fuerteventurae et Lancerottae, locis apricis calidis.

414. *H. contermina* Shuttleworth.

T. perforata, conico-globosa, tenuiuscula, confertim plicatula, sordide alba, corneo-marmorata; spira conica, apice obtusa; anfr. 6 perconvexi, regulariter accrescentes, ultimus basi convexusculus; apertura lunaris; perist. acutum, intus sublabiatum, margine columellari superne subdilatato, patente, perforationem non tegente. — Diam. maj. 6, min. $5\frac{2}{3}$, alt. $5\frac{2}{3}$ mill. (Mus. Cuming.)

Helix contermina Shuttl. in sched. Cuming.

Habitat in insula Corsica.

* * *

415. *H. pyramidata* Draparnaud.

T. umbilicata, orbiculato-pyramidata, striatula, albida, unicolor vel varic fusco-fasciata et variegata; spira conica, obtusa; anfr. 6 convexi, ultimus basi planiusculus, antice non descendens; apertura depressa, late lunaris; perist. rectum, intus labiatum. — Diam. maj. 11, min. 10, alt. $7\frac{1}{2}$ mill. (Coll. Nr. 232.)

β. Major: diam. maj. 25, min. 21, alt. 14 mill. (Spec. gall.)

Helix caespitum var. Rossm. X. p. 12. f. 597.

Helicella Eurythmia Hartm. I. c. f. 1—4.

γ. Spira vix elevata, testa fusco-cornea, albo-fasciata: diam. maj. 17, min. 14, alt. 8½ mill. (Spec. sicil.)

δ. Praecedenti similis, alba, fasciis castaneis denticulatis.

Habitat in Gallia, Italia, Sicilia, Lusitania, Hispania etc., var. δ in Caucaso.

Obs. Huc referendae in collectionibus dispersae: *H. leucophaea* Parr., frutetorum et introducta Zgl., etc.

417. **H. sphaerita Hartmann.** †

T. aperte umbilicata, depressa, striata, alba, obsolete fasciata; sutura profunda; anfr. $6\frac{1}{2}$ convexiusculi; apertura lunato-rotunda, marginibus distantioribus, perist. albo-labiatum. (Hartm.) — Diam. maj. 22, min. 19, alt. 43 mill. (ex ic.)

Helicella sphaerita Hartm. Gast. I. p. 147. t. 46. f. 4—6.

β. H. palmarum Parr. Hartm. l. c. t. 46. f. 4—3.

Habitat in Algeria prope Oran, var. β in Egypto.

418. **H. Krynickii Andrzejowski.**

T. rimato-perforata, depressa, striatula, nitida, nivea, apice cornea, fasciis variis nigris, ad basin fuscidulis, interruptis ornata; anfr. $5\frac{1}{2}$ —6 vix convexiusculi, ultimus inflatus, subdeviatus; umbilicus angustus, rimaeformis, non pervius, anfractum penultimum modo exhibens; apertura lunato-subcircularis; perist. acutum, intus albo-labiatum, marginibus conniventibus. — Diam. maj. 46, min. 43, alt. 8 mill. (Coll. Nr. 234.)

Helix Krynickii Andr. Bull. Mosc. VI. p. 434.

— — *Kryn.* in Bull. Mosc. IX. p. 195. *)

— *Babondubii* Parr. in sched. Ant. Verz. p. 37.

— — *Pfr.* Symb. II. p. 23.

Habitat in Tauria et in Croatia.

Obs. Ex specimine authentico cognovi, H. Babondubii esse eandem speciem.

419. **H. obvia Hartmann.**

T. aperte umbilicata, plana, striata, glabrata, alba, fusco-fasciata et lineata; anfr. 5 convexiusculi; apertura lunato-rotunda; perist. album, duplo-labiatum. — Diam. 46, alt. 7 mill. (Hlm.) — Coll. Nr. 235?

Helix obvia (*Helicella*) *Hartm.* Gast. I. p. 148. t. 45.

— — *Zgl.*? (Hlm.)

— *neglecta* *Hartm.* in Sturm Fauna VI. 7. N. 9.

— *formosa* *Parr.* in sched.?

Habitat in Germania, Bohemia, Austria, Croatia, Italia.

Obs. Num ab H. cespitem satis diversa?

*) T. orbiculato-convexa, depressiuscula, subtus convexa, tenui, pellucida, nitida, transversim striolata, tota flavescenti-albida, aut fasciis lineisque subdentalis, subtus saepe interruptis, fuscis nigrisve longitudinalibus ornata; anfr. 6 planulatis, ultimo incrassato; sutura tenui; spira parum exserta, apice fusco; umbilico mediocri spiraliter coarctato, eum labio a se remoto; apertura lunato-rotundata; perist. simplici, intus vix marginato, concolore. — Alt. 4, diam. 8 lin. — Distinguenda videtur ab H. cespitem: perist. concolori, non violaceo, intus vix incrassato, et umbilico diverso modo constructo. (Kryn. l. c.)

420. *H. ericetorum* Müller.

T. late umbilicata, depressa, striata, albida vel pallide fuscescens, concolor vel fasciis variis fuscis et corneis ornata; spira vix elevata; anfr. 6 convexiusculi, ultimus cylindricus, antice deflexus; apertura subcircularis; perist. rectum, intus leviter labiatum, marginibus approximatis. — Diam. maj. 17, min. 14½, alt. 8 mill. (Coll. Nr. 236. Spec. typ. Hass.)

Theba instabilis Beck ind. p. 13.

β. Minor, fusco-radiata et obsolete fasciata; diam. maj. $10\frac{1}{2}$, min. $9\frac{1}{2}$, alt. 5 mill. (Spec.)

Helix instabilis var. Chemn. l. c. t. 38. f. 7—9.

Habitat in Gallicia.

424. **H. candaharica** Pfr.

T. umbilicata, orbiculato-convexiuscula, oblique striatula, nitidula, fusciscenti-albida, fasciis angustis, maculose interruptis, nigricantibus et rufis oruata; spira vix elevata, apice nitida, cornea; anfr. 5 convexiusculi, ultimus antice non descendens; umbilicus infundibuliformis, anfractum penultimum late monstrans, medio angustissimus; apertura obliqua, lunato-ovalis; perist. acutum, intus subremote labiatum, marginibus conniventibus, columellari vix dilatato. — Diam. maj. 16, min. 13, alt. $7\frac{1}{2}$ mill. (Mus. Cuming.)

Helix candaharica Pfr. in Proc. Zool. Soc. 1846. p. 37.

Habitat ad Candahar Indiae orientalis (Benson).

virginalis Jan in sched. p. 115—1848

425. **H. Berlandieriana** Moricand.

T. umbilicata, depressa, striata, lucida, alba vel cinerea, interdum unifasciata; anfr. $4\frac{1}{2}$ convexiusculi, ultimus basi inflatus; apertura lunato-subcircularis; perist. acutum, intus labiatum, margine columellari juxta umbilicum angustum vix reflexo. — Diam. maj. $8\frac{1}{2}$, min. $7\frac{1}{2}$, alt. $3\frac{2}{3}$ mill. (Coll. Nr. 240.)

Helix Berlandieriana Mor. Mem. Gen. VI. p. 537. t. 1. f. 1.

— — Lam. ed. Dh. 222. p. 193.

— — Chemn. ed. II. Helix N. 243. t. 38. f. 18. 19.

— *virginalis* Jan in sched.

Habitat in Texas.

426. **H. nivea** Ziegler.

T. perforata, depresso-conica, solidula, nitidula, nivea; anfr. 5 vix convexiusculi, ultimus multo latior, descendens; umbilicus angustissimus, non pervius; apertura magna, oblique lunato-

ovalis; perist. subsimplex. — Diam. $41\frac{1}{2}$, alt. 7 mill. (Coll. Nr. 241.)

Helix nivea Zgl. Mus. Anton Verz. p. 37.

— — *Pfr.* Symb. II. p. 34.

— *alexandrina* Parr. in sched.

Habitat in insula Corfu.

427. *H. protea* Ziegler.

T. anguste umbilicata, depresso-globosa, albida, maculose fasciata vel concolor; spira conoidea; anfr. 5—6 convexi, ultimus magnus; apertura lunato-rotunda; perist. rectum, acutum, intus leviter labiatum. — Diam. maj. 44, min. 40, alt. 7 mill. (Coll. Nr. 242.)

Helix protea Zgl. Mus. Rossm. VIII. p. 34. f. 524.

— — *Chemn.* ed. II. *Helix* N. 246. t. 38. f. 22. 23.

— *obvia* Jan in sched. (unicolor.)

β. Major, depressior, umbilico paulo latiore:

Helix campestris Zgl. Mus.

— *pustulata* Mf. (Beck.)

Theba campestris Beck ind. p. 43.

Habitat in insulis jonicis: Corfu.

428. *H. dealbata* Lowe.

T. rimato-perforata, depressa, striatula et granulis minutis undique exasperata, solidiuscula, albida; spira parum elevata; anfr. 6 planiusculi, ultimus superne subangulatus, basi convexus, paulo devians, rimam formans, antice vix desceudens; apertura subcircularis; perist. simplex, intus sublabiatus, marginibus callo junctis. — Diam. maj. 9, min. 7, alt. $4\frac{3}{4}$ mill. (Coll. Nr. 243. Spec. Lowean.)

Helix dealbata Lowe Faun. Mader. p. 48. t. 5. f. 24.

— — *Lam.* ed. Dh. 148. p. 97.

— — *Chemn.* ed. II. *Helix* N. 245. t. 38. f. 20. 24.

Ochthephila dealbata Beck ind. p. 17.

β. Testa laevi, nitida.

Habitat in insula Portosancto, var. β in insula Ilhéu de Baxo.

429. *H. depauperata* Lowe.

T. umbilicata, globoso-depressa, solidiuscula, rugoso-striata, obsoletissime granulata, sordide albida; spira subelevata, obtusa; anfr. 5 convexi, ultimus basi convexior, antice desflexus; umbilicus angustus, pervius; apertura lunato-circularis; perist. acutum, intus albo-labiatus, marginibus lamina callosa junctis. — Diam. maj. 9, min. $7\frac{1}{2}$, alt. $5\frac{2}{3}$ mill. (Coll. Nr. 244.)

Helix depauperata Lowe Faun. Mader. p. 54. t. 6. f. 4.

Helix depauperata Chemn. ed. II. *Helix* N. 244. t. 38. f. 16. 17.

Ochthephila depauperata Beck ind. p. 17.

Habitat in montibus insulae Portosancto.

430. *H. caperata* Montagu.

T. umbilicata, depresso-globosa, costulato-striata, albida vel lutescens, fasciis strigisque fuscis, plerumque interruptis ornata; spira acuto-convexa; anfr. 5 convexi, ultimus non deflexus; umbilicus mediocris, apertus; apertura lunato-rotunda; perist. rectum, acutum, intus fulvo- vel rufo-labiatus. — Diam. maj. 44, min. $9\frac{2}{3}$, alt. 7 mill. (Coll. Nr. 245. Spec. Tergest.)

Xerophila striata Held in Isis 1837. p. 913.

β? Depressa, umbilico subinfundibuliformi, plerumque minor:

Helix Gigaxii Charp. in sched. Cuning.

Habitat in maritimis Europae meridionalis, Galliae, Illyriae, Italiae, Graeciae, nec non Britanniae et Hiberniae; in Iberia, Podolia? (Kryn.); var. β (forsan propria species?) prope Arles Galliae et prope Highbycombe Bucks Britanniae (Cuning).

Obs. Huc referendae: H. tergestina Mll., H. obesa et pulluja Zgl., H. strigata Stud., variegata Friv., Porro etc.

431. *H. lauta* Lowe.

T. umbilicata, subglobosa, subtus convexa, tenuiuscula, alba, fasciis angustis, interruptis, fuscis, obsoletis ornata, nitidiuscula; sutura distincta; anfr. 5 convexi, confertissime transversim striati, ultimus rotundatus; umbilicus parvus, cylindricus, profundus,

apertus; apertura lunata, subrotunda; perist. acutum, intus anulo distincto, elevato, margini approximato. — Axis $3'''$, diam. $\frac{7}{16}''$ (L.) — Diam. 11, alt. $7\frac{1}{2}$ mill. (ex ic.) — Coll. Nr. 246?

Helix lauta Lowe Faun. Mader. p. 53. t. 6. f. 9.

Theba lauta Beck ind. p. 12.

Habitat in insula Portosancto.

432. *H. candidula* Studer.

T. umbilicata, globoso-depressa, minute striata, albida, unicolor vel varie fusco-fasciata; anfr. $4\frac{1}{2}$ — 5 convexiusculi, ultimus antice vix deflexus; apertura rotundato-lunaris; perist. rectum, acutum, intus valide labiatum, marginibus subapproximatis, columellari in umbilicum angustum, pervium subexpanso. — Diam. maj. 9, min. 8, alt. 5 mill. (Coll. Nr. 247. Spec. hass.)

Theba candidula et *thymorum* Beck ind. p. 44.

Xerophila thymorum Held in Isis 1837. p. 913.

Habitat in Germania, Gallia, Croatia (!), Helvetia, Italia, Lusitania, Rossia, Tauria.

433. *H. lunulata* Krynicki. †

T. orbiculato-convexiuscula, subcarinata, subtus convexiuscula, solida, parum translucida, transversim striolata, alba aut lineis fuscis longitudinalibus fasciaeque saepissime tenui carinae ornata; anfr. 6 rotundati; sutura impressa; spira exserta; umbilicus angustus, profundus; apertura compresso-lunata, subobliqua; perist. patulum, intus incrassatum. — Diam. 4, alt. 2 lin. (Kr.)

Helix lunulata Kryn. Bull. Mosc. VI. p. 433. IX. p. 204.

Helix striata var. *i* Drap. (Kr.)

— — var.? *Fér.* in Bull. zool. 1835. p. 21.

Habitat prope Odessam.

Obs. «Ab *H. thymorum* distinguitur spira parum elevatiore, umbilico angustiore, apertura magis compressa, lunata, perist. intus semper calloso, callo in extremitatibus sinuato, superficieiue minus striata».

434. *H. costulata* Ziegler.

T. umbilicata, globoso-depressa, nitidula, confertim costulata, unicolor albida vel fusco-fasciata et radiata, vel nigricans, basi albo-cincta; anfr. 5 convexiusculi, celeriter accrescentes, ultimus antice vix descendens; apertura dilatata, lunato-circularis; perist. tenue, intus vix labiatum. — Diam. maj. $9\frac{1}{2}$, min. $8\frac{1}{2}$, alt. $6\frac{1}{2}$ mill. (Coll. Nr. 248.)

Helix costulata Zgl. Mus. C. Pfr. III. p. 32. t. 6. f. 21. 22.

— *narbonensis* Requier. (teste Beck.)

Helicopsis striata Fitzing. syst. Verz. p. 101 ?

Theba costulata et *Mühlfeldtii* Beck ind. p. 11.

Habitat passim in Germania (prope Vindobonam, Hildesiam, Schöppenstedt!), Gallia.

Obs. 1. Differt ab *H. candidula* umbilico majore, anfractibus latioribus, costulatis, et aperturae margine columellari arcuatim descendente. — Hue referendae: *H. compressula* Stentz, *Mühlfeldtiana* Zgl.

Obs. 2. Conf. *H. arenosa* Kryn. (Nr. 421 β .)

435. *H. Meda* Porro. †

T. vix rimata, supra globosa, subtus planiuscula, anfractu ultimo subcarinato: strigis crebris ab infera perforatione irradian- tibus; colore plerumque albido, aliquando subferrugineo, strigis semper albis; saepe monocroma quandoque maculis et fasciis brunneis picta; apertura depressa, subquadrata; perist. recto, intus rufo-circinnato. — Alt. 8, diam. 10 — 12 mill. (Porro.)

Helix Meda Porro in Revue zool. 1840. p. 126.

— — *Villa* dispos. syst. p. 54.

Habitat prope Sassari Sardiniae.

*) «T. perforata, subdepressa, striata, alba, fascia rufa. — Diam. 5 lin. — Hab. in Gallia. — T. alba, pellucida, supra depressa, vertice tantisper elevato, striis argutis exarata, subtus convexa, laeviuscula; fascia unica rufa ipsam carinam ambit. Anfractus fere 6. Labium crassiusculum, album; foramen apertum, claudi tamen in adultis suspicior. In altero exemplari fascia abrupta est». (Müll. l. c.) — Species a Cl. Draparnaud ad *H. fasciolam* (recentioribus aucto- ribus plane incognitam) relata, a Cl. Beck sub nomine *Theba strigosulae* (Hel.) Gmelin enumerata.

436. **H. Aradasii Mandralisca.** †

T. globoso-conica, perforata, subtenuis, longitudinaliter striata; anfr. 6 rotundati, fascia unica brunnea, interrupta cincti; apertura rosca, rotundata; perist. intus marginatum, labro simplice. — Diam. $4\frac{3}{4}$, alt. $5\frac{1}{2}$ lin. (M.)

Helix Aradasii Mandr. nota di taluni specie di Moll. p. 6.

— — *Arad. et Magg.* catal. p. 86.

— — *Phil. Sicil.* II. p. 218.

Habitat in Sicilia, ubi ad «Pantano dell' argo» prope Messinam detexit Cl. de Schwerzenbach.

437. **H. vestalis Parreyss.**

T. umbilicata, depressiuscula, solida, nitida, nivea, apice nigricans; anfr. 5— $5\frac{1}{2}$ convexiusculi, ultimus multo latior; umbilicus angustus, pervius; apertura subcircularis; perist. simplex, marginibus approximatis. — Diam. 12, alt. 6— $7\frac{1}{2}$ mill. (Coll. Nr. 249?)

Helix vestalis Parr. in sched. *Pfr.* Symb. I. p. 40.

— *mirabilis Parr.?* (Anton.)

Habitat in Egypto.

438. **H. apicina Lamarck.**

T. aperte umbilicata, globoso-depressa, supra planiuscula, subtus turgida, albida, striata, vertice corneo-variegata; sutura profunda; anfr. 4— $4\frac{1}{2}$ convexi, ultimus antice dilatatus; apertura rotundato-lunaris; perist. rectum, subsimplex, acutum. — Diam. maj. 7, min. 6, alt. 4 mill. (Coll. Nr. 250.)

— *hispida* Jeffr. Linn. transact. XVI. p. 2?

— . . . Fér. hist. t. 69 K. f. 13—16.

Theba conspurcata Risso IV. p. 74.

Habitat in Gallia, Lusitania et Sicilia (Philippi)!

Obs. Cl. Morelet varietalem refert minorem (3 mill. diam.), unicolorem corneam, secundam majorem (9 mill. diam.), tertiamque magis elevatam.

440. *H. cyparissias* Parreyss.

T. mediocriter umbilicata, depressiuscula, subtiliter et confertim costulata, alba, eorneo-punctata vel fusco irregulariter maculata et subfasciata; spira plane elevata, vertice acutiusculo, corneo; anfr. 5 convexi, ultimus teres, antice non descendens; apertura subcircularis; perist. reetum, acutum, tenuiter fulvolabiatum, marginibus approximatis, columellari vix dilatato. — Diam. maj. 6, min. $5\frac{1}{3}$, alt. 4 mill. (Coll. Nr. 252.)

Helix cyparissias Parr. in sched.

— — Pfr. in Zeitschr. f. Malak. 1847. p. 32.

Habitat in insula Cypro.

Obs. Similis *H. apicinae*, affinis varietatibus minoribus *H. caperatae*, apertura subcirculari statim distinguenda.

§. 31.

441. *H. turcica* (Trochus) Chemnitz. †

T. albida, depressa, unibilicata, carinata, scabra, punctis eminentibus; margine anfractuoso acuto, muricato; umbilico pervio, amplo, marginato; apertura subtetragona. (Ch.) — Diam. maj. 24, min. 20 mill. (ex ic. Chemn.)

Trochus turcicus Chemn. XI. p. 280. t. 209. f. 2065. 66.

— *leucas* Menke. (teste Beck.)

Theba? planata et *erythrostoma* Beck ind. p. 15.

Habitat in imperio Maroccano (Chemn.), in insulis Canaria, Lancerotta et Graciosa (W. et B.).

454. *H. arietina* Rossmässler.

T. perforata, depressa, solidula, oblique striata, lineis confertis, impressis, spiralibus subtiliter reticulata, vix nitidula, opaca, albida, fasciis luteis latis, lineisque fuscis nonnullis ornata, acute carinata: carina compressa; spira parum elevata; anfr. 5, superne subplanulati, exserti, ultimus antice descendens, basi convexus; apertura lunato-securiformis; perist. rectum, acutum, intus valide labiatum, margine columellari late reflexo, patente, carneo. — Diam. maj. 21, min. 19, alt. 12 mill. (Coll. Nr. 260.)

Helix arietina Rossm. in Zeitschr. f. Mal. 1846. p. 172.

— — Chemm. ed. II. Helix N. 230. t. 36. f. 5 — 7.

Habitat in Hispania: Sierra de S. Cristoval (Dr. Willkomm).

Obs. Hanc cum *H. planata* Ch. ad unam eandemque speciem referendam censeo.

455. *H. pisanoides* Orbigny. †

T. orbiculato-depressa, tenuis, subumbilicata, carinata, exilissime striata, alba, lineis nigris cineta; spira complanata; anfr. 4 carinati; apertura subquadrilatera, intus incrassata. — Diam. $7\frac{1}{2}$, alt. 4 mill. (O.)

Helix pisanoides Orb. moll. cub. I. p. 155. t. 10. f. 1 — 4.

Habitat in insulae Cubae regionibus interioribus.

§. 33.

456. *H. Caroni* Deshayes.

T. perforata, turrato-conica, basi planiuscula, plicata, lutescens, fusco-maculata; anfr. 10—11 plani, exserti, serrato-carinati, ultimus antice non descendens; apertura depressa, securiformis; perist. rectum, acutum, intus remote labiatum. — Diam. maj. 9, min. $8\frac{1}{2}$, alt. 11 mill. (Coll. Nr. 261.)

Helix Caroni Desh. in Enc. méth. II. p. 262. N. 142.

— — Chemm. ed. II. Helix N. 143. t. 23. f. 30. 31.

477. *H. lamellosa* Férussac.

T. umbilicata, lenticularis, tenuis, nitida, glabra, acute carinata, flavescens, maculis et flammis rufis ornata; spira subelevata; anfr. 7 plani, ultimus basi inflatus, ad umbilicum mediocrem, cylindricum angulatus; apertura depressa, trapezia, ringens: lamellis 2 magnis in pariete aperturali, reliquis minoribus, 4 in

marginē columellari brevi, 4 in basali, 4 in supero. — Diam. maj. $7\frac{1}{2}$, min. 7, alt. $3\frac{3}{4}$ mill. (Coll. Nr. 277.)

Helix lamellosa (Helicodonta) Fér. pr. 110. Hist. t. 51 A. f. 3.

— — Fér. in Voy. de Freycinet. Zool. p. 469.

— — Pfr. in Zeitschr. f. Mal. 1845. p. 85.

— — Chemn. ed. II. Helix t. 100. f. 6—9.

Habitat in insulis Sandwich.: Wahoo.

478. *H. pentodon* Menke.

T. umbilicata, conoidea, solida, irregulariter striata, nitidula, albo corneoque variegata; spira conoidea, obtusa; anfr. 6 plani, ultimus acute carinatus, basi convexiusculus, circa umbilicum mediocrem, cylindricum angulatus; columella verticalis; apertura tetragona, dentibus 5 profundis, breviter lamelliformibus coarctata; dentibus 2 in ventre anfractus penultimi, 2 in margine basali, 4 in columellari; perist. simplex, acutum. — Diam. maj. 9, min. 8, alt. 7 mill. (Coll. Menke.)

Helix pentodon Mke in Zeitschr. f. Mal. 1846. p. 128.

— — Chemn. ed. II. Helix t. 100. f. 32—34.

Habitat ... ?

*478^b Hel. Jacquineti Pfr. Feb. 1849
1107. 72.*

478^a. *H. bursatella* Gould. †

T. parva, pervariabilis, rotundata, conica vel planulata, supra maculis fuscis et albidis alternantibus, flexuosis tessellata, infra cinereo-albida vel flammulis fuscis flexuosis radiata, costis numerosissimis acutis radiantibus lyrata, subtus convexiuscula, interdum simplex, interdum concentricè striata, nunc radiatim costellata, nunc albida, nunc fusco-flammulata; spirae anfr. ad 8 externe excavati, ultimus carinatus; sutura impressa, plerumque marginata; apertura parva, transversa, fauce cum lamellis 7 volventibus, quarum 2 superiores, 4 columellaris, 4 remotae, (4 supra, 3 infra carinam) ad labium; labrum simplex; umbilicus cavernosus, in junioribus acetabuliformis, in majoribus ad januam parvus, constrictus, margine acuto, una cum labio continuo. (G.)

Helix bursatella Gould 1846. Exped. shells p. 22.

α. Major, elevata, conica, striis costaeformibus, lineisque spiralibus baseos nullis. — Lat. $\frac{3}{10}$, alt. $\frac{2}{10}$ poll.

β. Minor, depressa, magis minusve ruditer costata et utrinque striata. — Lat. $\frac{1}{5}$, alt. $\frac{1}{10}$ poll.

Habitat in insulis Tahiti et Eimeo.

*478^c Hel. coarctata Pfr.
Feb. 1849. p. 74.*

479. *H. contorta* Férussac.

T. umbilicata, depressa, tenuis, fragilis, striata, tenuissime pilosa, luteco-flava, flammulis longitudinalibus rubris picta; spira

vix convexa; anfr. $4\frac{1}{2}$ convexi; umbilicus latus, pervius; apertura subrotunda, 7 dentata, lamellis 2 parallelis, intrantibus parietis aperturalis coarctata; perist. simplex, acutum, margine dextro dentibus 5 acutis munito. — Diam. maj. 4, min. 3, alt. $1\frac{1}{2}$ mill. (Coll. Nr. 278.)

Helix contorta (Helicodonta) Fér. hist. t. 54 A. f. 2.

— — Fér. in Voy. de Freycin. Zool. p. 469.

— — Desh. in Fér. hist. p. 10.

— — Chemn. ed. II. Helix t. 100. f. 4—5.

— *intercarinata* Mighels in Bost. Proc. 1845. p. 18.

Habitat in insula Sandwich.: Oahu.

479. *H. daedalea* Gould. †

T. parva, discoidea, rubro-castanea, fusco tessellata, costellis radiantibus acutis confertis scabra, subtus acetabuliformis; spirae anfr. ad 6 arcuati voluti, duplo altiores quam lati, ad peripheriam rotundati, infra laud planulati; sutura impressa; apertura angusta, verticalis, lunata, fauce lamellis 9 volventibus instructa, quarum 4 ad anfractum penultimum, 1 ad columellam, 2 ad basim, 3 ad labium dispositis. — Alt. $\frac{1}{20}$, lat. $\frac{1}{10}$ poll. (G.)

Helix daedalea Gould 1846. Exped. shells p. 24.

Habitat in ins. Taheiti, Matea.

480. *H. sexlamellata* Pfr.

T. angustissime perforata, subsemiglobosa, tenuis, regulariter costulata, lutescens, maculis castaneis tessellata; spira elevata, obtusa; anfr. 6 convexi, angusti, ultimus basi planulatus; apertura depressa, oblique lunaris, lamellis 6 acute elevatis coarctata: 3 parallelis in ventre anfractus penultimi, 3 in fundo aperturae, illis oppositis, interjectis pluribus minoribus, obsoletis; perist. simplex, acutum. — Diam. maj. $3\frac{1}{4}$, min. 3, alt. $2\frac{1}{4}$ mill. (Coll. Nr. 279.)

Helix sexlamellata Pfr. in Zeitschr. f. Mal. 1845. p. 85.

— — Chemn. ed. II. Helix t. 100. f. 44—48.

Habitat in insulis Gambier.

481. *H. oparica* Anton.

T. subperforata, orbiculato-convexiuscula, tenera, costulato-striata, fuscescens, obsolete rubro-maculata; spira depressa; anfr. $4\frac{1}{2}$ —5 angusti, convexiusculi; apertura late lunaris; perist. acutum ad umbilicum usque productum; dentes 3 lamelliformes in pariete aperturali, 4 in margine basali. — Diam. maj. $3\frac{1}{2}$, min. 3, alt. 2 mill. (Coll. Nr. 280.)

Helix oparica Anton Verz. p. 39. N. 1443.

Helix oparica Ant. in litt. Pfr. Symb. II. p. 92.

— — Chemn. ed. II. *Helix* t. 100. f. 16—20.

— . . . Fér. hist. Fasc. 34. t. 4. f. 12.

Habitat in insula Opara (Cuming).

§. 36.

482. *H. tichostoma* Pfr.

T. late umbilicata, discoidea, hyalina, nitida, tenuissime striata; spira plana; anfr. 5 superne planiusculi, angusti, ultimus multo latior; apertura triangulari-ovalis, lamina horizontali anfractus penultimi quasi dimidiata; perist. simplex, acutum, recutum. — Diam. maj. 6, min. 5, alt. $2\frac{2}{3}$ mill. (Coll. Nr. 281. Spec. max.)

Helix tichostoma Pfr. in Wieg. Arch. 1839. I. p. 351.

— — Chemn. ed. II. *Helix* t. 100. f. 28—31.

Habitat in insula Cuba, prope El Fundador provinciae Canimarensis!

482^a. *H. rubiginosa* Gould. †

T. orbicularis, depressa, ferrugineo-cornea, fuseo tessellata, oblique costato-striata, late umbilicata; spirae anfr. 6 arcte voluti; sutura impressa; apertura subrecta, lunata; labrum simplex; lamella unica secundum anfraetum penultimum volvens. — Lat. $\frac{7}{30}$, alt. $\frac{3}{40}$ poll. (G.)

Helix rubiginosa Gould 1846. Exped. shells p. 21.

Habitat in insula Sandwich.: Kauai.

Obs. «Forma, magnitudine et sculptura *H. striatellae* Anlh. similis».

482^b. *H. obolus* Gould. †

T. parva, discoidea, deorsum compressa, supra planulata, infra coneava, radiatim minutissime et inaequaliter striata, fusco-ferruginea, piceo tessellata; spirae anfr. $5\frac{1}{2}$ supra excavati, ultimus superne costato-carinatus; apertura subrhonboidea, fauce lamella unica secundum anfraetum penultimum volvente. — Lat. $\frac{1}{5}$, alt. $\frac{1}{30}$ poll. (G.)

Helix obolus Gould 1846. Exped. shells p. 22.

Habitat in insula Tahiti.

Obs. «Forma *Planorbis vorticis*».

483. *H. jugosa* Mighels. †

T. late et profunde umbilicata, depressa, subdiscoidea, rubescenti-brunnea; anfr. 5 convexi, striis incrementi numerosis, elevatis; apertura circularis, modificata anfractu penultimo cum lamina tenui, elevata, intrante; labrum simplex, tenue. — Diam. $\frac{9}{10}$ ". (M.)

Helix jugosa Migh. in Bost. Proc. 1845. p. 19.

Habitat in insula Sandwich.: Waioli.

* * *

484. *H. bilamellata* Pfr.

T. umbilicata, conica, tenuis, cornea, longitudinaliter valide et regulariter plicata; spira elongata, sursum valde attenuata, acuta; anfr. 9 carinati (carina exserta, acuta, subaculeata); ultimus basi convexiusculus; umbilicus angustus, pervius; apertura subverticalis, subquadrangularis, lamellis 2 coarctata: altera intrante in pariete aperturali, altera crassiore ad columellam; perist. simplex, rectum. — Diam. maj. 4, mín. $3\frac{2}{3}$, alt. $4\frac{1}{2}$ mill. (Coll. Nr. 282.)

Helix bilamellata Pfr. in Zeitschr. f. Mal. 1845. p. 84.

— — Chemn. ed. II. Helix t. 101. f. 16—18.

Habitat in insula Opara (Cuming).

§. 37.

485. *H. oblecta* Lowe.

T. umbilicata, depressa, superne planiuscula, basi convexa, solidiuscula, croso-scribiculata, subgranulata, sordide alba; anfr. 5 convexi, primi immersi, sequentes turgidi, ultimus superne angulatus, antice deflexus; umbilicus mediocris, pervius; apertura subcircularis; perist. continuum, vix expansum, intus subincrassatum. — Diam. maj. 10, mín. 9, alt. 5 mill. (Coll. Nr. 283.)

Helix oblecta Lowe Faun. Mader. p. 47. t. 5. f. 20.

— — Chemn. ed. II. Helix N. 577. t. 91. f. 19—21.

β. Minor, anfr. $4\frac{1}{2}$, primis non immersis, umbilico angustiore: diam. maj. 7, mín. $6\frac{1}{4}$, alt. $3\frac{1}{2}$ mill.

Habitat in insula Portosancto et Ilheo de Baxo.

486. *H. abjecta* Lowe.

T. perforata, globoso-conica, superne rugoso-striata, undique minute granulata, solida, rudiusscula, grisea, basi obsolete fusco-unifasciata; spira elata; anfr. $6\frac{1}{2}$ —7 convexi, ultimus subcarinatus, basi convexiusculus, antice subito deflexus; apertura perobliqua, circularis, intus fuscata; perforatio punctiformis; perist.

simplex, continuum, album, breviter reflexum, vix solutum. — Diam. maj. $6\frac{2}{3}$, min. $5\frac{1}{2}$, alt. $4\frac{1}{2}$ mill. (Coll. Nr. 284.)

Helix abjecta Lowe Faun. Mader. p. 50. t. 6. f. 4.

— — Chemn. ed. II. Helix N. 579. t. 94. f. 22—24.

Ochthephila abjecta Beck ind. p. 17.

Habitat in insula Portosancto vulgatissima.

487. **H. taeniata Webb et Berthelot. †**

T. supra valde depressa, subtus convexiuscula, subcinerea, acute carinata, striata, fascia supra unica fusco-purpurea, margine lacera, subtus integra, latiore; anfr. 7; apertura orbicularis, continua; perist. liberum, crassiusculum, vix revolutum; umbilicus magnus, profundus. — Axis 2, diam. 4 lin. (W. et B.)

Helix taeniata Webb et Berth. syn. p. 324.

— — Orb. canar. p. 63. t. 3. f. 18—20.

Habitat in insulis Canariis.

488. **H. paupercula Lowe.**

T. late umbilicata, subdiscoidea, superne plana vel parum elevata, sub lente minutissime granulata, grisea, punctis fuscis aspersa; anfr. $3\frac{1}{2}$ —4 supra plani, ultimus superne angulatus, basi convexus, ad aperturam circularem angulatim constrictus et coarctatus; perist. continuum, acutum, fuscum, quasi duplicatum, margine acuto in strictura anfractus immerso, margine dextro intus unidentato. — Diam. maj. 5, min. $4\frac{1}{2}$, alt. $2\frac{3}{4}$ mill. (Coll. Nr. 285.)

Helix paupercula Lowe Faun. Mader. p. 47. t. 5. f. 19. (auct.)

Ochtheophila bicarinata Beck ind. p. 17.

Obelus duplicatus Hartm. Gast. I. p. 160. t. 52. f. 4—6.

Habitat in insula Portosancto.

491. *H. oxytropis* Lowe.

T. perforata, depresso-conica, granulis undique exasperata, carinata, castanea, basi flavida; sutura linearis; spira elevata, obtusa; anfr. 6 planuli, ultimus antice deflexus, basi vix convexus, acute carinatus: carina subtus sulco distincta; perforatio angustissima, non pervia; apertura subhorizontalis, circularis; perist. simplex, acutum, subexpansum, continuum, solutum. — Diam. maj. 9, min. $8\frac{1}{3}$, alt. $5\frac{1}{2}$ mill. (Coll. Nr. 288.)

Helix oxytropis Lowe Faun. Mader. p. 57. t. 6. f. 18. (auct.)

— — Chemn. ed. II. Helix N. 575. t. 91. f. 12. 13.

Ochtheophila oxytropis Beck ind. p. 17.

Habitat in collibus maritimis iusulae Portosancto.

492. *H. turricula* Lowe.

T. vix subperforata, pyramidato-turrita, minute et confertissime granulata, fusca, fere unicolor vel subtus obsolete fasciata; spira valde elevata, obtusa; sutura distincta; anfr. 8— $8\frac{1}{2}$ bicarinati (carinis aequalibus, prominentibus, distinctis, sulco divis),

ultimus antice vix deflexus, basi convexiusculus; apertura perobliqua, subcircularis; perist. continuum, vix disjunctum, tenue, superne rectum, basi breviter reflexum. — Diam. maj. 7, min. $6\frac{1}{2}$, alt. 9 mill. (Coll. Nr. 289.)

Helix turricula Lowe Faun. Mader. p. 58. t. 6. f. 24.

— — Chemn. ed. II. Helix N. 573. t. 94. f. 5—7.

Turricula turricula Beck ind. p. 40.

Habitat in insula Ilheo de Cima, juxta ins. Portosancto.

493. **H. thiarella Webb et Berthelot.**

T. angustissime umbilicata, trochiformis, albo et fusco variegata, bicarinata, ad suturam tuberculato-plicata; spira conica, apice obtusa, cornea; anfr. $6\frac{1}{2}$, ultimus basi confertim et concentricè granulato-sulcatus, antice angulatim deflexus; apertura subhorizontalis, circularis; perist. expansum, continuum, solutum. — Diam. maj. 7, min. $6\frac{1}{3}$, alt. 5 mill. (Coll. Nr. 290.)

Helix thiarella Webb et Berth. syn. p. 346.

— — Orb. canar. p. 62. t. 4. f. 26—28.

— — Chemn. ed. II. Helix N. 576. t. 94. f. 14—16.

Geomitra bicarinata Swms. Malac. p. 166. f. 20.

Turricula thiarella Beck ind. p. 40.

Ochthephila thiarella Beck ind. p. 48.

Habitat in insulis Canariis et Madera. (In Roccellae sarcinis invenit Cl. Terver.)

§. 39.

494. **H. follis Férussac. †**

T. imperforata, ovato-conica, albida; spira obtusa; anfr. 4 convexi, ultimus reliquos longe superans, basi fulvescens et cingulis 3 pallide rufis, interruptis ornatus; apertura lunato-ovalis; perist. simplex, acutum, margine columellari subrecte descendente, dilatato, reflexo, albo. — Diam. 86, alt. 80 mill. (ex ic. spec. unici Mus. Paris.)

Helix follis (Helicogena) Fér. pr. 49. Hist. t. 17. f. 4.

Habitat...?

495. **H. undata Lowe.**

T. imperforata, depresso turbinata, nigricanti-fusca, plicis validis undatim corrugata; spira late conoidea; anfr. $5\frac{1}{2}$ convexiusculi, ultimus antice valde deflexus; apertura ampla, lunato-ovalis; perist. superne simplex, marginibus callo tenuissimo junctis, columellari dilatato, appresse reflexo, plano. — Diam. maj. 22, min. 19, alt. 44 mill. (Coll. Nr. 294.)

Otala indistincta Beck ind. p. 36.

β . Minor, anfractu ultimo subangulato: diam. maj. $40\frac{2}{3}$, min. 9, alt. 6 mill. (Coll. Dunker.)

Habitat in insula Haïti (Mus. Paris.); β in Mexico (David).

502. *H. punctulata* Sowerby.

T. subobtecte umbilicata, subglobosa, concentrice lineata, flavo-fusca, fasciis 2 saturate brunneis vel nigricantibus ornata, epidermide setigera induta; spira breviuscula; sutura distincta, depressiuscula; anfr. 5, ultimi convexi; apertura rotundato-lunaris; perist. simplex, margine dextro breviter expanso, columellari dilatato, albo, reflexo. — Diam. maj. 47, min. 44, alt. 43 mill. (Coll. Nr. 294.)

Helix punctulata Sow. in Zool. Journ. I. p. 56. t. 3. f. 2.

— — Lowe Faun. Mader. p. 52. t. 6. f. 7. 8.

— — Fér. hist. t. 28 B. f. 31 et 4?

— — Wood suppl. t. 8. f. 80.

— — Lam. ed. Dh. 439. p. 93.

— — Chemn. ed. II. Helix N. 594. t. 93. f. 44—46.

Galaxias punctulata Beck ind. p. 42.

α . Setulosa: t. subtenuis, subinflata, scabra, spinelloso-hispida. Axis $\frac{1}{2}$, diam. $\frac{3}{4}$ poll. (Lowe f. 7.)

β . Solida: t. solida, glabriuscula, pallida. Axis $\frac{3}{8}$, diam. $\frac{1}{2}$ poll. (Lowe f. 8.)

γ . Major, subfossilis: diam. 24, alt. 22 mill. (ic. Féruss.)

Helix Bowdichiana Fér. hist. t. 28 B. f. 5. 6.

Galaxias Bowdichiana Beck ind. p. 42.

Habitat in insula Portosanto.

502^a Hel. Vargusiana Pfr. in 25. Mag. 118

502^b Hel. calcarea Pfr. in 25. Mag. 116.

503. *H. pellicula* Férussac. †

T. subumbilicata, conoideo-globosa, tenuis, laevis, lutescens, fusco-trifasciata; anfr. 4—5 planiusculi; apertura lunato-rotun-

data; perist. simplex, margine columellari dilatato. — Diam. maj. 14, min. 11, alt. 12 mill. (ex ic. Féruss.)

Helix pellicula (Helicostyla) Fér. hist. t. 105. f. 1.

— — Wood suppl. t. 7. f. 54.

— — Chemn. ed. II. Helix N. 436. t. 72. f. 24—26.

Habitat . . . ?

504. *H. consors* Lowe.

T. subperforata, orbiculato-convexa, superne costulato-granulata, basi laevigata, striatula, nitida, albido et fusco variegata, subtus pallidior; spira convexa; anfr. 6 convexusculi, ultimus rotundatus, basi convexus, antice subito deflexus; perforatio punctiformis; apertura lunato-ovalis, intus alba; perist. simplex, marginibus distantibus, supero recto, basali reflexiusculo. — Diam. maj. 9, min. 8, alt. $5\frac{2}{3}$ mill. (Coll. Nr. 295. Spec. Lowcan.)

Helix consors Lowe Faun. Mader. p. 51. t. 6. f. 3.

— — Chemn. ed. II. Helix N. 582. t. 92. f. 1. 2.

Ochthephila consors Beck ind. p. 17.

Habitat in insula Portosancto.

505. *H. lancerottensis* Webb et Berth. †

T. minuta, trochiformis, subglobosa, striatula, sordide fusca, variata; apertura semicircularis; vertex obtusus; anfr. $4\frac{1}{2}$. — Axis $2\frac{1}{2}$, diam. 2 lin. (W. et B.)

Helix lancerottensis Webb et Berth. syn. p. 316.

— — Orb. canar. p. 60. t. 1. f. 24. 25.

Ochthephila lancerottensis Beck ind. p. 18.

Habitat ad oram maritimam insulae Lancerottae.

§. 44.

506. *H. pernobilis* Martyn. †

T. umbilicata, depresso-globosa, laevis, rufa; anfr. $5\frac{1}{2}$ convexusculi, ultimus ventrosus; umbilicus angustus, pervius; apertura lunato-circularis, intus coerulescenti-albida; perist. simplex, marginibus conniventibus, columellari et basali albis, reflexis. — Diam. maj. 65, min. 49, alt. 42 mill. (ex ic. Féruss.)

Helix pernobilis Martyn Univ. Conch. III. 117.

— — (Helicella) Fér. pr. 182. Hist. t. 74. f. 3.

Habitat . . . ?

Obs. Cl. Beck hanc speciem, quam solum ex icone Ferussaciana novi et descripsi, ad *H. peruvianam* Lam. (latissime umbilicatam) dubitanter refert!

507. **H. Buffoniana Pfr.**

T. anguste umbilicata, subglobosa, distincte grauiolata, plicis validis obliquis exasperata, castanea, albo irregulariter strigata, fasciis 3 nigricantibus obsolete ornata; spira parvula, conoidea, obtusa; anfr. 4 convexi, ultimus permagnus, vesicularis; apertura lunato-ovalis, intus livida, margaritacea; perist. obtusum, marginibus conniventibus, columellari arcuato, fornicatim reflexo, umbilicum fere tegente, basali incrassato, breviter reflexo. — Diam. maj. 47, min. 38, alt. 34 mill. (Coll. Nr. 296.)

Helix Buffoniana Pfr. in Zeitschr. f. Mal. 1845. p. 152.

— — *Phil. Icon.* II. 15. *Helix* t. 9. f. 2.

— — *Chemn. ed. II.* *Helix* N. 589. t. 92. f. 11—13.

— . . . *Fér. hist.* t. 17 A. f. 17. ~~N~~

Habitat ad Rio frio reipublicae mexicanae.

Obs. Peraffinis sequenti; differt magnitudine, sculptura multo validiore, anfractu ultimo vesiculari, margine columellari appresso, umbilicum fere occultante, etc.

508. **H. Humboldtiana Valenciennes.**

T. anguste umbilicata, subglobosa, oblique rugosa, granulosa, fasciis 3 badiis cineta, epidermide fusca strigatim induta; anfr. 4 convexiusculi, ultimus ventrosus; apertura magna, lunato-rotundata, intus nitide alba, trifasciata; perist. simplex, marginibus conniventibus, columellari late expanso, patente, basali subreflexo. — Diam. maj. 30, min. 24, alt. 20 mill. (Coll. Nr. 297.)

Helix Humboldtiana Val. in Mus. Paris. I.

— — *Pfr. Symb.* I. p. 37.

— — *Phil. Icon.* II. 9. p. 3. t. 6. f. 7.

— — *Chemn. ed. II.* *Helix* N. 590. t. 92. f. 18. 19.

— *badiocincta* Wieg. in Mus. Reg. Berol. olim.

Habitat in republica mexicana: Desierto, venta di Guajmilpan (Hegewisch in litt.).

509. **H. nitidiuscula Sowerby.**

T. anguste umbilicata, depresso-globosa, striata et punctulata, flavida, superne lineis 3 rufis circumdata; anfr. 5½ convexi, ultimus basi subinflatus; apertura subcircularis; perist. simplex, tenue, margine columellari subdilato, umbilicum non occultante, basali subreflexo. — Diam. maj. 13, min. 11½, alt. 9 mill. (Coll. Nr. 298.)

Helix nitidiuscula Sow. in Zool. Journ. I. p. 57. t. 3. f. 4.

— — *Lowe Faun. Mader.* p. 52. t. 6. f. 6.

— — *Fér. hist.* t. 28 B. f. 1. (dextr.)

— — *Lam. ed. Dh.* 135. p. 91.

— — *Chemn. ed. II.* *Helix* N. 604. t. 94. f. 5. 6.

β. Major, testa superne castanea, ad peripheriam luteo-fasciata, basi pallide lutea: diam. maj. 15, min. 12½, alt. 10 mill. (Spec.)

Helix nitidiuscula Fér. t. 28 B. f. 1. (2 fig. sinistr.)

— — var. Chemn. l. c. t. 94. f. 7. 8.

Habitat in insulis Madera et Portosancto vulgatissima. (Lowe.)

510. *H. lurida* Lowe. †

T. subglobosa, depressiuscula, subtus convexa, umbilicata, tenuiuscula, fuseo-subfasciata, nitidiuscula; sutura distincta; anfr. 5½—6 convexi, minutissime et obsoletissime reticulato-granulati, ultimus rotundatus, juxta suturam granulatus, inferne laevis; umbilicus parvus, cylindricus, profundus, apertus; apertura lunaris, subovalis; perist. simplex. — Axis 3, diam. 5 lin. (L.) — Diam. 40½, alt. 6 mill. (ex ic.)

Helix lurida Lowe Faun. Mader. p. 52. t. 6. f. 5.

Habitat in montibus insulae Portosancto.

511. *H. Aubcrii* Orbigny. †

T. orbiculato-convexa, tenuis, alba, umbilicata, irregulariter substriata, obsolete angulata; spira conica; anfr. 6, ultimus magnus; apertura subrotunda. — Diam. 12, alt. 9 mill. (O.)

Helix Aubcrii Orb. moll. cub. l. p. 157. t. 7. f. 13—16.

Habitat in insula Cuba.

* * *
511^a = *Hel. bulbosus* Menke. *H. in 25. pag. 116*

512. *H. Kraussi* Pfr.

T. umbilicata, globuloso-depressa, confertim striata, corneofusca; spira parum elevata; anfr. 4½ vix convexusculi, rapide accrescentes, ultimus latus, subdepressus, antice deflexus; umbilicus medioeris, pervius; apertura perobliqua, truneato-ovalis; perist. simplex, margine supero recto, columellari dilatato, reflexo. — Diam. maj. 29, min. 23½, alt. 46 mill. (Coll. Krauss.)

Helix Kraussi Pfr. Symb. III. p. 70.

β. Minor, tenuis: diam. maj. 24, min. 17, alt. 41 mill.

Habitat in sylvis prope George et Knysna in provincia Outeniqua promontorii bonae spei. (Legit Cl. Krauss.)

512^a = *Hel. Roemeri* Pfr. in 25. pag. 117.

513. *H. stigmatica* Pfr.

T. umbilicata, orbiculato-depressa, tenuis, luteo-cornea, subdiaphana, minutissime granulata (hispidi?); spira plana; anfr. 4½ convexi, supremi horizontales, ultimus sensim descendens, rotundatus; apertura lunato-subcircularis; perist. simplex, rectum,

marginē dextro vix expansiusculo, columellari parum reflexo. — Diam. maj. 47, min. 44, alt. $8\frac{1}{2}$ mill. (Coll. Nr. 299.)

Helix stigmatica Pfr. Symb. I. p. 40.

— — *Phil.* Icon. II. 9. p. 4. t. 6. f. 6.

— — *Chemn.* ed. II. *Helix* N. 609. t. 93. f. 20—22.

Habitat in insula Cuba, ubi legit amicus E. Otto.

514. *H. crassula* Philippi.

T. anguste umbilicata, fusco-cornea, subopaea, supra depressiuscula, subtus tumidior; anfr. $4\frac{1}{2}$ convexi, ultimus non descendens, subcompressus; columella recte descendens; apertura verticalis, lunaris; perist. simplex, marginē dextro arcuato, columellari breviter reflexo. — Diam. maj. $42\frac{1}{2}$, min. $40\frac{2}{3}$, alt. $7\frac{2}{3}$ mill. Apert. alt. 6, lat. $5\frac{2}{3}$ mill. (Spec. Mus. Halens.)

Helix crassula Phil. Icon. I. 7. p. 152. t. 3. f. 3.

Habitat in insula Java.

Obs. 1. Specimina non detrita et juniora pilosa sunt. — Forma similis *H. velutinae* Lam., umbilico et aperturae forma diversa.

Obs. 2. Hoc loco conf. *H. barbula* Nr. 550.

* * *

515. *H. compacta* Lowe.

T. perforata, orbiculato-convexa, solidiuscula, superne costulato-striata et granulata, basi laevigata, striatula, nitida, albido et corneo variegata, subtus obsolete fusco-unifasciata; spira convexa; anfr. 6 vix convexiusculi, ultimus obsolete angulatus, antice vix descendens; umbilicus minimus; apertura lunato-circularis; perist. simplex, marginibus approximatis, basali reflexiusculo. — Diam. maj. 6, min. $5\frac{1}{3}$, alt. 4 mill. (Coll. Nr. 300.)

Helix compacta Lowe Faun. Mader. p. 50. t. 6. f. 2. (auct.)

— — *Chemn.* ed. II. *Helix* N. 645. t. 99. f. 25—27.

— ... ? Sow. in Zool. Journ. I. p. 58. t. 3. f. 8. (absq. nom.)

— *innominata* Gray in Ann. of Phil. New ser. IX. p. 412.

Ochthephila innominata Beck ind. p. 47.

Habitat in insula Portosancto.

516. *H. candidata* Menke

T. perforata, subglobosa, pallide cornea, tenuiuscula, superne granulato-costata, basi nitidula, striatula, minute granulosa; spira semiglobosa; anfr. $6\frac{1}{2}$ angusti, convexi, ultimus superne vix latior, obsolete angulatus, basi convexiusculus, minute perforatus, antice vix deflexus; apertura depresso-circularis; perist. simplex,

marginibus approximatis, basali reflexiusculo. — Diam. maj. 7, min. 6, alt. $4\frac{1}{2}$ mill. (Coll. Menke.)

Helix candidata Mke in Pfr. Symb. III. p. 70.

— — Chemn. ed. II. Helix N. 646. t. 99. f. 34—36.

Habitat in insula Madera?

Obs. Differt a praecedente testa superne ruditer costata, basi granulata, anfractibus convexis, etc.

§. 42.

517. *H. canaliculata* Pfr. †

T. orbiculato-ovata, latissime umbilicata, depresso-convexiuscula, tenuissima, fragilis, subhyalina, epidermide luteo-fuscescente, subtus luteo-viridescente; spira obtusa; anfr. 5 convexi, sutura profunda, canaliculata discreti, oblique, creberrime, profunde et undulatum striati: striis ad paginam inferiorem rugaeformibus, laxis, irregularibus, tenuissimis, creberrimis ac concentricis sub lente perspicuis; umbilicus largus, dilatatus usque ad apicem; apertura ovata, albida, reflexiuscula; labrum superne extus depressum. — Diam. 47, alt. 20 mill. (Guill.)

Helix canaliculata Pfr. Symb. III. p. 23.

— *undulata* Le Guill. in Revue zool. 1845. p. 187. Nec Fér.

Habitat rarissima ad Triton-Bay Novae Guineae.

518. *H. laxata* Férussac.

T. late umbilicata, orbiculato-depressa, tenuis, confertissime ruguloso-striata, superne fulvo-rufescens, basi nitide fulvo-virescens, lincis concentricis confertissimis minute decussata; spira vix elevata; anfr. $4\frac{1}{2}$ —5 convexiusculi, rapide accrescentes, ultimus latus, depressus, antice descendens; apertura subhorizontalis, ampla, transverse ovalis, intus margaritacea; perist. subsimplex, margine supero tenui, vix expansiusculo, basali subcalloso, reflexo. — Diam. maj. 45, min. 35, alt. 16 mill. (Coll. Nr. 301.)

Helix laxata (Helicella) Fér. pr. 181. Hist. t. 74. f. 3.

— — Chemn. ed. II. Helix N. 595. t. 93. f. 11—13.

— *peruviana* Lam. 44. p. 76. ed. Dh. p. 45.

— *Deshayesi* Ant. Verz. p. 38. N. 1411.

Macrocyclus peruviana Beck ind. p. 24.

β. Maxima: diam. maj. 60, min. 48, alt. 22 mill. (Spec.)

Helix Banksii Cuming in sched.

— *laxata* var. Chemn. l. c. t. 93. f. 9. 105.

γ. Junior: H. umbilicata Anton Verz. p. 38?

Habitat in Chile, nec in Peruvia (Cuming).

519. **H. Vancouverensis** Lea.

T. late umbilicata, orbiculato-depressa, solidiuscula, minutissime et confertim striata et rugulosa, olivaceo-cornea; spira vix elevata; anfr. 4 — $4\frac{1}{2}$ plaiusculi, scusim accrescentes, ultimus basi subcompressus, antice deflexus; apertura perobliqua, sub-circularis; perist. superne depressum, simplex, basi incrassatum, breviter reflexum, marginibus approximatis. — R. a. = 3 : 4. — Diam. maj. 31, min. 26, alt. 44 mill. (Coll. Nr. 302.)

Helix Vancouverensis Lea obs. II. p. 87. t. 23. f. 72.

— — — *Pfr.* Symb. II. p. 41.

— — — *Chemn.* ed. II. *Helix* N. 596. t. 94. f. 21 — 23.

Habitat in America boreali, frequens in ripis fluvii Columbia-River, Oregon.

520. **H. Sinclairi** Pfr.

T. late umbilicata, depressa, tenuis, regulariter et confertim costulato-striata, fulvo-flava, lineis rufis interruptis multifasciata; spira subplanulata; anfr. 4 planulati, sutura levi disjuncti, celeriter accrescentes, ultimus depressus, antice valde deflexus; apertura perobliqua, lunato-ovalis; perist. simplex, marginibus approximatis, dextro recto, columellari obliquo, breviter reflexo, calloso. — Diam. maj. 47, min. 45, alt. $7\frac{1}{2}$ mill. (Spec. Mus. Britt.)

Helix Sinclairi Pfr. in Zeitschr. f. Mal. 1845. p. 454.

Habitat in Van-Diemensland (Dr. Sinclair).

521. **H. planorboides** Rafinesque.

T. late umbilicata, depressa, superne laeviuscula, basi costulato-striata, diaphana, corneo-flavida; spira brevissima; sutura mediocris; anfr. 5 planiusculi, ultimus antice non deflexus; apertura vix obliqua, lunato-circularis; perist. simplex, marginibus approximatis, basali reflexiusculo. — Diam. maj. 44, min. 42, alt. $6\frac{1}{2}$ mill. (Coll. Nr. 303.) Alia specim. majora.

Mesomphix planorboides Rafin. (teste Fér.)

Helix planorboides (Helicella) Fér. pr. 211. Hist. t. 82. f. 4.

Circinaria planorboides Beck ind. p. 24.

Habitat in America boreali: Illinois et Missouri.

522. **H. coactiliata** Férussac.

T. late umbilicata, depressa, subdiscoidea, tenuis, sub lente minutissime granulato-striata, haud nitens, pallide cornea, fasciis

angustis, rufis 3—4 ornata; spira vix elevata; anfr. 4 convexi, ultimus antice subdeflexus, basi vix latior; apertura perobliqua, subcircularis; perist. simplex, marginibus fere contiguis, supero recto, basali breviter reflexo. — Diam. maj. 11, min. 9½, alt. 4 mill. (Coll. Nr. 304.)

Helix coactiliata Fér. Mus.

— — Desh. in Fér. hist. p. 18. t. 72. f. 1—5. *)

— — Chemn. ed. II. Helix N. 610. t. 95. f. 23—25.

— *fasciata* Nyst in sched. Nec Risso, nec Guild.

— *Nystiana* Pfr. in Proc. Zool. Soc. 1845. p. 130.

Habitat in Real Llejos provinciae Nicaraguae Americae centralis (Cuming), in Tabasco (Nyst), circa Touspan in Peruvia (Desh.)

523. *H. suturalis* Pfr.

T. late umbilicata, depressa, subdiscoidea, tenuis, sub lente minutissime granulosa (pilosa), fusco-cornea; spira plana, medio subimmersa; sutura profunda; anfr. 4 convexissimi, ultimus antice descendens; apertura perobliqua, subcircularis; perist. simplex, marginibus conniventibus, dextro recto, superne fornicato, columellari subrecedente, arcuato, basali breviter reflexis. — Diam. maj. 10, min. 9, alt. 4 mill. (Mus. Cuming.)

Helix suturalis Pfr. in Proc. Zool. Soc. 1846. p. 37.

Habitat in Honduras (Dyson).

Obs. Peraffinis praecedenti; differt umbilico minus dilatato, anfractibus superne fornicatim elevatis et aperturae forma.

524. *H. Beckiana* Pfr.

T. umbilicata, orbicularis, tenuis, oblique striata, fusca, vix nitidula; spira parum elata; sutura linearis; anfr. 6 planiusculi, ultimus deflexus, basi planiusculus, ad peripheriam angulatus: angulo ad aperturam obsoleto; umbilicus majusculus, pervius; apertura fere horizontalis, subtrapezoidalis; perist. simplex, margine columellari brevi, basali reflexo, quasi in tuberculum incrassato. — R. a. = 5 : 6. — Diam. maj. 22, min. 19, alt. 10 mill. (Coll. Nr. 305.)

Helix Beckiana Pfr. in Proc. Zool. Soc. 1842. p. 87.

— — Pfr. Symb. II. p. 23.

— — Phil. Icon. I. 4. p. 79. t. 4. f. 8.

— — Chemn. ed. II. Helix N. 597. t. 93. f. 7. 8.

Habitat prope «Nueva Ecija» insulae Luzon (Cuming).

*) T. discoidea, supra plana, depressa, pilosa, corneo-lutescente, fusco-rubescente quadrizonata (vel trizonata, vel superne unizonata); anfr. convexis, ultimo basi late umbilicato; apertura subcirculari, obliqua; margine reflexo, tenui, albicante. — Diam. 12, alt. 4 mill. (Desh. l. c.)

525. **H. Winteriana Pfr.**

T. umbilicata, depressa, superne convexiuscula, pallide cornea, nitidula, obsolete carinata; anfr. $5\frac{1}{2}$ planiusculi, ultimus descendens; umbilicus latus, pervius; apertura subcircularis; perist. tenue, simplex, margine basali subreflexo. — Diam. maj. 12, min. 11, alt. 6 mill. (Coll. Nr. 306.)

Helix Winteriana Pfr. Symb. II. p. 41.

— — *Phil. Icon.* I. 2. p. 23. t. 2. f. 7.

— — *Chemn. ed.* II. *Helix* N. 605. t. 95. f. 1. 2.

β . Minor, carina distinctiore: diam. maj. 9, min. 8, alt. $4\frac{1}{2}$ mill. (Mus. Cuming.)

Habitat in insula Java (Winter); var. β in insula Guimaras Philipinarum (Cuming).

Obs. Similis *H. umbrosae*, umbilico magno, deficiente labio interno aperturae, etc. distincta.

526. **H. Huttoni Pfr.**

T. umbilicata, orbiculato-convexiuscula, subdiaphana, pallide cornea, epidermide scabra induta; anfr. 6 convexiusculi, ultimus angulatus, antice vix descendens; umbilicus latiusculus, perspectivus; apertura obliqua, lunato-rotundata; perist. simplex, marginibus conniventibus, dextro recto, basali breviter reflexo, columellari subdilato, patente. — Diam. maj. 10, min. 9, alt. $5\frac{1}{2}$ mill. (Mus. Cuming.)

Helix Huttoni Pfr. Symb. II. p. 82.

— *orbicula Hutt.* in Journ. As. Soc. VII. p. 217. *) Nec Orb.

Habitat in Himalaya, prope Simla, Mahassu (Hutt.), Landour (Benson).

§. 43.

527. **H. Delessertiana Le Guillou. †**

T. orbiculato-depressa, subtus convexior, tenuis, albido-fuscescens, hyalina; anfr. $5\frac{1}{2}$ subvitrei, superne convexo-depressi, striis obliquis, creberrimis pulchre sculpti; sutura subcanaliculata; umbilicus latus, profundus; labium superne reflexum. — Diam. $16\frac{1}{2}$, alt. 10 mill. (Guill.)

Helix Delessertiana Le Guillou in Revue zool. 1842. p. 138.

Habitat in insula Warrior «detroit de Torrès».

*) T. orbiculato-convexa, fuscescente, epidermide scabra; anfr. 6 convexiusculis, ultimo ad peripheriam subangulato; umbilico profundo, latiusculo; perist. subrotundo, acuto. — Diam. 0,4 poll. (Hutt. l. c.)

528. **H. Hartmanni Pfr.**

T. umbilicata, depressa, subdiscoidea, acute carinata, arcuatim distincte striata, unicolor, fusca; spira vix elata; sutura linearis; anfr. 6 planulati, ultimus non descendens, basi convexiuseulus; umbilicus magnus, perspectivus; apertura depressa, securiformis; perist. rectum, margine supero simplice, antrorsum arcuato, basali subincrassato. — Diam. maj. 26, min. 24, alt. 8 mill. (Coll. Nr. 307.)

Helix Hartmanni Pfr. in Proc. Zool. Soc. 1845. p. 125.

— — Chemn. ed. II. Helix N. 598. t. 94. f. 46—48.

Habitat . . . ?

529. **H. rotatoria v. d. Busch.**

T. umbilicata, lenticularis, fusca, oblique striata, acute carinata; spira vix convexa; anfr. 6 planiuseuli, ultimus basi inflatus, circa umbilicum latum, infundibuliformem obtuse angulatus; apertura lunato-subcircularis; perist. subsimplex, basi reflexiuseulum. — Diam. maj. 46, min. 45, alt. 7 mill. (Coll. Nr. 308.)

Helix rotatoria v. d. Busch in Phil. Icon. I. 4. p. 10. t. 4. f. 5.

— — Pfr. Symb. II. p. 38.

— — Chemn. ed. II. Helix N. 606. t. 95. f. 3—5.

Habitat in insula Java (Winter).

529^a. **H. Osbeckii Philippi.**

T. medioeriter umbilicata, depressa, tenuis, striatula, subtilissime punctato-exasperata, diaphana, pallide corneo-lutescens; spira parum elevata; anfr. 6 subplanulati, ultimus carinatus, basi convexus, antice vix descendens; apertura obliqua, subquadrangularis, intus margaritacea; perist. simplex, marginibus subparallelis, dextro recto, basali reflexiuseculo, columellari vix dilatato. — Diam. maj. 45, min. 43½, alt. 7 mill. (Coll. Philipp.)

Helix Osbeckii Phil. in Zeitschr. f. Malak. 1847. p. 65.

Habitat in China (teste Largilliert).

* Obs. Ab H. rotatoria umbilico multo angustiore et forma aperturæ, ab H. Winteri et Huttoni, quibus peraffinis, iisdem characteribus et carina acuta distinguenda.

530. **H. oajacensis Koch.**

T. umbilicata, depressa, oblique striata, asperula, sub lente minutissime granulosa, obtuse carinata, corneo-rufa, fasciis 2 luteis, altera ad carinam, altera in parte supero anfractus ultimi ornata; anfr. 4½ vix convexiuseuli; umbilicus latiusculus, pervius; apertura lunato-subcircularis, intus rufa, albo-bifasciata; perist.

acutum, basi reflexum. — Diam. maj. 15, min. 13, alt 8 mill. (Coll. Koeh.)

Helix oajacensis Koch in Phil. Icon. I. 2. p. 23. t. 2. f. 6.

— — Pfr. Symb. II. p. 35.

Habitat prope Oajaea reipublicae mexicanae.

531. *H. sinaitensis* Pfr.

T. umbilicata, orbiculato-convexa, tenuis, confertim striata, cornea; spira convexa, obtusa; anfr. 7 angusti, vix convexiuseuli, earina filiformi eineti, ultimus basi convexior; umbilicus latus, perspectivus; apertura rotundato-lunaris; perist. simplex, margine supero brevi, recto, basali valde arcuato, breviter reflexo. — Diam. maj. 10, min. $9\frac{1}{3}$, alt. 4 mill. (Mus. Cuming.)

Helix sinaitensis Pfr. in Proc. Zool. Soc. 1845. p. 429.

Habitat prope Sinaï prov. Iloeos insulae Luzon (Cuming).

532. *H. cyathus* Pfr.

T. umbilicata, orbiculato-conica, superne arcuatim costulato-striata, unicolor fusca; spira elevata, obtuse conica; sutura distincta, crenulato-marginata; anfr. $6\frac{1}{2}$ convexiuseuli, ultimus earinatus, basi sublaevigatus, planiusculus; umbilicus magnus, profundus, cyathiformis; apertura subverticalis, angulato-lunaris; perist. simplex, margine supero recto, basali arcuato, reflexiuseulo, columellari breviter descendente. — Diam. maj. 8, min. $7\frac{1}{2}$, alt. $4\frac{1}{2}$ mill. (Coll. Nr. 309.)

Helix cyathus Pfr. in Proc. Zool. Soc. 1845. p. 123.

— — Chemn. ed. II. Helix N. 603. t. 94. f. 19. 20.

Habitat ad S. Juan, prov. Cagayan insulae Luzon (Cuming).

533. *H. cyathellus* Pfr.

T. umbilicata, conica, oblique costata, tenuiuseula, unicolor cornea; spira pyramidata, aetiuscula; anfr. 9 angustissimi, earina filiformi cincti, ultimus basi planiusculus, sublaevigatus; umbilicus majusculus, pervius; apertura depressa, angulato-lunaris; perist. simplex, margine supero brevi, recto, basali leviter arcuato, brevissime reflexo. — Diam. maj. $5\frac{1}{3}$, min. 5, alt. 4 mill. (Spee. unie. Mus. Cuming.)

Helix cyathellus Pfr. in Proc. Zool. Soc. 1846. p. 44.

Habitat ad Dingle insulae Panay Philippinarum (Cuming).

* * *

534. *H. cariosa* Olivier.

T. umbilicata, orbicularis, earinata, utrinque convexa, alba, crispato-rugellosa, rudis; spira depresso-hemisphaerica; anfr. 5

medio convexi, ultimus antice vix deflexus, circa umbilicum majusculum, pervium abrupte angulatus; apertura angulato-subcircularis; perist. simplex, marginibus callo junctis, columellari crasso, reflexo. — Diam. maj. $18\frac{1}{2}$, min. 17, alt. 10 mill. (Coll. Nr. 340.)

Helix cariosa Oliv. voyage II. p. 224. t. 34. f. 4.

— — *Lam.* 84. p. 88. ed. Dh. p. 67.

— — (*Helicigoua*) *Fér.* pr. 149. Hist. t. 64. f. 3.

— — *Chemn.* ed. II. *Helix* N. 604. t. 94. f. 9. 10.

Carocolla cariosa Gray in Ann. of Phil. New ser. IX. p. 412.

Leucochroa cariosa Beck ind. p. 16.

Habitat in Syria, prope Berytum (Oliv.).

535. *H. Otthiana* (*Carocolla*) Forbes.

T. umbilicata, depressa, sublenticularis, carinata, alba, striata; spira convexa; sutura subcrenulata; anfr. 5 planulati, sensim accrescentes, ultimus antice vix deflexus; apertura perobliqua, rotundato-lunaris, subangulata; perist. simplex, sublabiatum, margine columellari valde dilatato, reflexo, umbilicum partim tegente. — Diam. maj. 23, min. $19\frac{1}{2}$, alt. 10 mill. (Coll. Nr. 344.)

Carocolla Otthiana Forb. in Ann. et Mag. nat. hist. II. p. 250.

Helix Jeannotiana Terv. cat. p. 20. t. 2. f. 11. 12.

— — *Rossm.* IX. p. 6. f. 564.

— *Otthiana* *Chemn.* ed. II. *Helix* N. 600. t. 94. f. ~~11~~ 12.

Habitat in Africa boreali, prope Bugia.

§. 44.

536. *H. Gouldi* Pfr.

T. umbilicata, orbiculato-conica, tenuiuscula, subtiliter striatula, vix nitidula, unicolor fusca; spira elevata, conoidea; anfr. 6 convexiusculi, ultimus carinatus, antice subrotundatus, basi planior; umbilicus mediocris, pervius; apertura lunato-circularis; perist. simplex, marginibus subconniventibus, dextro recto, columellari subdilatato, patente, basali reflexiusculo. — Diam. maj. $9\frac{1}{2}$, min. 9, alt. 6 mill. (Coll. Nr. 342.)

Helix Gouldi Pfr. in Proc. Zool. Soc. 1845. p. 124.

— — *Chemn.* ed. II. *Helix* N. 607. t. 95. f. 6. 7.

Habitat in provincia Lagunas ins. Luzon et ins. Negros (Cuming).

537. *H. nigrítella* Pfr.

T. umbilicata, conoideo-depressa, solidiuscula, fusca, epidermide nigricanti-olivacea induta; anfr. $5\frac{1}{2}$ vix convexiusculi, lente crescentes, ultimus basi convexus, medio acute carinatus;

umbilicus mediocris, pervius; apertura securiformis; perist. simplex, margine supero antrorsum arcuato, acuto, basali reflexo. — Diam. maj. $4\frac{1}{2}$, min. 13, alt. $7\frac{1}{2}$ mill. (Coll. Nr. 313.)

Helix nigrítella Pfr. in Phil. Icon. II. 9. p. 4. Helix t. 6. f. 8

— — Chemn. ed. II. Helix N. 602. t. 94. f. 1—4.

Habitat in insulis oceani pacifici (Cuming).

Obs. Variat testa magis minusve depressa, interdum conica (diam. $4\frac{1}{2}$, alt. 9 mill.), umbilico latiore et angustiore.

538. *H. approximata* Le Guillou. †

T. discoidea, conico-depressa, umbilicata, carinata, fusca, cinerco-lutescente variegata; anfr. 6—7 subconvexi, basi depressi, ultimus margine acutus, subtus convexus, radiatim tenuiter striolatus, striis concentricis signatus; spira conico-depressa; umbilicus profundus; apertura oblique quadrata, incrassata, anterieus acuta, superne producta, exteriusque compressa. — Diam. 17, alt. 11 mill. (Guill.)

Helix approximata Le Guill. in Revue zool. 1842. p. 139.

Habitat in insulis Ternate et Hogoleu.

Obs. «Affinis *H. exclusae* Fér.»

539. *H. trochiformis* Férussac.

T. umbilicata, solida, trochiformis, apice obtusa, basi plana, acute carinata, oblique ruguloso-striata, saturate rufa vel fuscolutea, nigricanti-fasciata; anfr. 6 supra carinam prominentem, stramineam convexusculi; umbilicus angustus, pervius; apertura irregulariter rhombea; perist. superne simplex, rectum, antrorsum dilatatum, margine columellari recte descendente, subdilatato, basali reflexiusculo. — Diam. maj. $16\frac{1}{2}$, min. 15, alt. 9—10 mill. (Coll. Nr. 314.)

Helix trochiformis (Helicella) Fér. pr. 304. et Mus.!

— — Pfr. Symb. II. p. 40.

— — Chemn. ed. II. Helix N. 68. t. 13. f. 7. 8.

Carocolla circumdata Mühlf. Ant. Verz. p. 40. N. 1464.

Habitat in insulis Tahiti et Opara (Ant.); Isle de France (Fér.)

540. *H. serrula* Benson.

T. anguste umbilicata, subdepressa, subconoidea, corneo-albida, subtus convexa, apice acuta; anfr. 7 supra confertissime radiatim plicati, marginati, marginibus elevatis, ultimus infra laevior, peripheria marginata, serrata; apertura angulato-lunaris;

perist. simplex, acutum, margine basali reflexiusculo. — Diam. maj. 14, min. 12, alt. $7\frac{1}{2}$ mill. (Spee. Mus. Britt.)

Helix serrula Benson in Journ. As. Soc. V. p. 352.

Habitat in Bengalìa.

Obs. Conf. H. Bensoni v. d. Busch. (Nr. 563.)

541. *H. tapeina* Benson. †

T. subeonoidea, supra convexa, subtus tumida, epidermide minutissime corrugata; periphèria angulata; perist. non continuum, subreflexum; umbilicus medioeris, profundus, omnes anfractus exhibens. — Diam. 0,6 poll. (B.)

Helix tapeina Bens. in Journ. As. Soc. V. p. 352.

— — Ann. and mag. nat. hist. IX. p. 486.

Habitat in Bengalìa, rara in insula Chusan Chinae.

* * *

542. *H. Dunniæ* Gray.

T. umbilicata, depressa, fusca, earinata, irregulariter granulato-striata; spira parum elevata, obtusa; anfr. 4 planulati, ultimus antice paululum descendens, basi convexus, circa umbilicum medioerem infundibuliformem compressus; apertura perobliqua, irregularis, transverse oblonga, latere effusa; perist. simplex, margine supero depresso, antrorsum dilatato, columellari breviter reflexo. — Diam. maj. 24, min. 20, alt. 11 mill. (Spee. Mus. Britt.)

Helix Dunniæ Gray in Ann. and mag. nat. hist. VI. 1841. p. 317. *)

— — Pfr. Symb. III. p. 70.

Habitat in Nova Seelandia.

543. *H. Guilloui* Pfr. †

T. discoidea, earinata, acuta, umbilicata, depresso-convexa, longitudinaliter tenue et oblique striata; anfr. 5 planuli, lineis rufis trifasciati, supremi unifasciati et convexiusculi; infima facies unifasciata, subconvexa, striolis sub lente tenue cancellata; apertura ovata, antèrius angulata, superne acuta, inferne reflexa; umbilicus latus, profundus. — Diam. 23, alt. 8 mill. (Guill.)

Helix Guilloui Pfr. Symb. II. p. 81.

— — *Valenciennesii* Le Guill. in Revue zool. 1842. p. 139.
Nec Eyd.

Habitat . . . ?

*) «T. depressa, lata, umbilicata, fusca, anfractu ultimo subangulato, glabro.» (Gray l. c.) — Eandem esse ipse affirmavit Cl. Gray.

544. *H. dictyodes* Pfr.

T. anguste umbilicata, depressa, sublenticularis, oblique plicato-striata, tenuiuscula, diaphana, pallide cornea, fusco subtiliter reticulata maculisque castaneis justa suturam et carinam ornata; spira late conoidea; anfr. 7 vix convexiusculi, ultimus acute carinatus, antice non descendens; apertura subverticalis, depressa, lunaris, intus margaritacea; perist. simplex, margine columellari breviter dilatato-patente, basali sinuoso, reflexiusculo. — Diam. maj. 27, min. 23, alt. 12 mill. (Mus. Cuming.)

Helix dictyodes Pfr. in Proc. Zool. Soc. 1846. p. 111.

— — *Phil. Icon.* III. 47. *Helix* t. 10. f. 9.

Habitat in Nova Guinea (Ince).

545. *H. tectiformis* Sowerby.

T. umbilicata, depresso semiglobosa, tenuiuscula, calcarea, superne leviter striata, plerumque detrita, basi confertim granulata; spira brevis, obtusa; anfr. 7 planati, lente accrescentes, ultimus acute carinatus: carina late deflexa, tectiformi; apertura trapezia; perist. acutum, superne simplex, rectum, basi reflexiusculum, ad umbilicum angustum, pervium vix dilatatum. — Diam. maj. 16, min. 15, alt. $6\frac{1}{2}$ mill. (Coll. Nr. 315.)

Helix tectiformis Sow. in Zool. Journ. I. p. 57. t. 3. f. 6.

— — *Lowe Faun. Mader.* p. 45. t. 5. f. 12.

Ochtheiphila polymorpha Beck ind. p. 17.

Carocolla polymorpha Villa disp. p. 19.

Obelus polymorphus Hartm. Gast. I. p. 169. t. 58.

Habitat in insulis Madera, Portosancto, Teneriffa.

Obs. 1. Variat praeter magnitudinem spira magis minusve elevata, carina obliuore, interdum antice obsoleta, sutura magis minusve impressa, granulis fere obsoletis, etc.

Obs. 2. Cl. Cantraine (Mal. méd. p. 130.) Carocollam limbatam Phil. cum hac specie conjungere vult!!

559. *H. maderensis* Wood.

T. umbilicata, depressa, sublenticularis, solidiusecula, albidocornea, superne costulato-striata, basi striatula, laevigata, rufo-unifasciata; spira vix elevata; anfr. 6 convexiuseculi, ultimus carinatus, antice subgranulatus, subito deflexus; apertura perobliqua, subcircularis; perist. simplex, marginibus callo subcontinuo junctis, basali reflexiusculo. — Diam. maj. 6, min. 5½, alt. 3 mill. (Coll. Nr. 325.)

Helix maderensis Wood suppl. t. 8. f. 84.

— — Lowe Faun. Mader. p. 48. t. 5. f. 22. (auct.)

*) T. depressa, umbilicata, carinata, cornea, guttulis albidis eleganter aspersa (2''' alt., 4''' lat.); apertura subrotunda (2''' in diam. transv.); perist. continuo, carinae sinuato, simplici. — Ins. Canar. (Jan I. c.)

Helix maderensis Lam. ed. Dh. 201. p. 124.

— — Chemn. ed. II. Helix N. 583. t. 92. f. 9. 10.

— *cyclostoma* Mke syn. ed. II. p. 126.

— — Voigt in Cuv. Thierr. III. p. 60.

Ochthephila maderensis Beck ind. p. 18.

Habitat in insula Madera vulgatissima.

560. *H. compar* Lowe. †

T. umbilicata, rotundato-depressa, utrinque plauulata, subcarinata, solidiuscula, fusco-bifasciata, utrinque plicato-costata; spira convexuscula; sutura distincta, impressa; anfr. 6 convexusculi, plicis vel striis transversis, acutis, distinctis, crebris, aequidistantibus aequalibusque costati, interstitiis laevibus; ultimi carina obtusa; umbilicus latus, patulus, spiralis, profundus; apertura rotundato-ovalis; perist. continuum, circinatum, subdisjunctum, crassiusculum, reflexum. — Axis $1\frac{1}{2}$, diam. $3\frac{1}{4}$ lin. (L.)

Helix compar Lowe Faun. Mader. p. 48. t. 5. f. 23. (auct.)

Leucochroa compar Beck ind. p. 16.

Habitat rarissima in Maderae collibus maritimis.

561. *H. leptosticta* Lowe. †

T. umbilicata, rotundato-depressa, subcarinata, nitidiuscula, tenuis, pallide cornea, obsolete fasciata; spira convexo-depressa; sutura distincta; anfr. 5 — $5\frac{1}{2}$ convexi, substriati, minute et elegantissime reticulato-granulati, ultimi carina obtusa; umbilicus patulus, spiralis; apertura rotundato-ovalis; perist. continuum, simpliciusculum, subincrassatum, subreflexum. — Axis $1\frac{1}{2}$, diam. 3 lin. (L.)

Helix leptosticta Lowe Faun. Mader. p. 49. t. 5. f. 24. (auct.)

Ochthephila leptosticta Beck ind. p. 17.

Habitat in Maderae collibus maritimis.

§. 45.

562. *H. scabriuscula* Deshayes.

T. obtecte perforata, depressa, compresso-cariuata, striato-rugosa, albida; anfr. 4 — $4\frac{1}{2}$ exserti, supra planulati, fusco-maculati, ultimus basi turgidus, antice descendens; apertura angulata, lunato-securiformis; perist. tenue, marginibus approximatis, supero recto, basali sublabiato, angulatum reflexo, columellari dilatato, appresso. — Diam. maj. 24, min. 21, alt. 40 mill. (Coll. Nr. 326.)

Helix scabriuscula Desh. in Enc. méth. II. 130. p. 238.

— — Lam. ed. Dh. 225. p. 135.

— — Phil. Sicil. II. p. 105.

— — *Rossm.* IV. p. 7. f. 234—36.

Carocolla erycina Phil. Sicil. I. p. 135. t. 8. f. 4.

Iberus scabriuscula Beck ind. p. 27.

β. Minor, tenue striata, carina brevior, maculis rufis confluentibus: diam. maj. 18, min. 15½, alt. 9 mill. (Spec.)

Carocolla selinuntina Phil. Sicil. I. p. 136. t. 8. f. 11.

Iberus selinuntina Beck ind. p. 27.

Helix selinuntina Phil. Sicil. II. p. 105.

Habitat in Sicilia occidentali.

563. *H. Hedenborgi* Pfr.

T. subimperfata, depressissima, subdiscoidea, acute carinata, tenuiuscula, confertim rugoso-striata, superne albido et fusco variegata, basi subvirescente fuscescens; spira vix elevata; anfr. 5½ plani, non exserti, ultimus basi vix ventrosior, antice non descendens; apertura depressa, angulato-lunaris; perist. tenue, marginibus subparallelis, supero recto, basali breviter reflexo, columellari vix dilatato, reflexo, appresso. — Diam. maj. 18, min. 15½, alt. 6 mill. (Mus. Cuming.)

Helix Hedenborgi Pfr. in Proc. Zool. Soc. 1845. p. 132.

Habitat in Egypto (Dr. Hedenborg).

Obs. Similis videtur *H. nummo* Ehrenb. (Nr. 549.), sed illa umbilicata dicitur.

564. *H. cariosula* Michaud.

T. subimperfata, subsemiglobosa, carinata, superne globoso-convexa, cariosa, subtus planiuscula, sordide alba, carina filiformi suturaque tuberculato-erosis; anfr. 5 planiusculi; apertura lunaris; perist. simplex, sublabiatum, angulatum, margine supero subdeflexo, basali subincrassato, columellari dilatato, reflexo, perforationem obtegente. — Diam. maj. 18; min. 16, alt. 10—12 mill. (Coll. Nr. 327.)

Helix cariosula Mich. Alg. p. 5. t. 1. f. 11. 12.

— — *Chemn.* ed. II. *Helix* N. 587. t. 92. f. 16. 17.

Leucochroa cariosula Beck ind. p. 17.

Habitat in Algeria.

565. *H. Küsteri* Pfr.

T. subimperfata, orbiculato-convexa, solida, striata, carinata, castanea, apice fulva; spira elevata, obtusa; sutura marginata; anfr. 6½ convexiusculi, ultimus antice non descendens, basi

vix convexus; apertura depressa, lunato-triangularis; perist. rectum, margine supero simplice, antrorsum arcuato, basali strictiusculo, calloso, incrassato, columellari brevissimo. — Diam. maj. 48, min. 47, alt. $9\frac{1}{2}$ mill. (Coll. Nr. 328.)

Helix Küsteri Pfr. in Zeitschr. f. Mal. 1845. p. 453.

— — Chemn. ed. II. Helix N. 586. t. 92. f. 44. 45.

Habitat in insula Otaheite.

566. *H. rotula* Lowe.

T. obtecte perforata, conoideo-depressa, striata et granulis oblongis obsita, nitidiuscula, fulva, luteo obsolete marmorata et fasciis nonnullis rufis angustis circumdata; spira depresso-conica; sutura linearis; anfr. 8 plani, ultimus acute carinatus, basi vix convexior, antice rotundatus, subgibbus, ochraceus, subito deflexus; apertura lunato-subcircularis, intus albo-callosa; perist. album, marginibus callo junctis, dextro arcuato, basali dilatato, reflexo, strictiusculo, perforationem tegente. — Diam. maj. 42, min. 41, alt. $6\frac{1}{2}$ mill. (Coll. Nr. 329.)

Helix rotula Lowe Faun. Mader. p. 53. t. 6. f. 10.

— — Chemn. ed. II. Helix N. 70. t. 43. f. 44. 42.

Ochthephila rotula Beck ind. p. 47.

Habitat in montibus insulae Portosancto.

567. *H. tumulorum* Webb et Berthelot.

T. subobtecte perforata, trochiformis, basi convexiuscula, acute carinata, distincte et confertim striata, alba, fasciis fuscis, interruptis ornata; spira conica, apice acutiuscula; aufr. 6 — 7 vix convexiusculi, ultimus antice non descendens; apertura late angulato-lunaris, intus fuscidula; perist. simplex, acutum, margine basali reflexiusculo, columellari dilatato, perforationem subtgente. — Diam. maj. 42, min. 41, alt. 7 mill. (Coll. Nr. 330.)

Helix tumulorum Webb et Berth. syn. p. 345.

— — Orb. canar. p. 63. t. 4. f. 29 — 31.

— — Chemn. ed. II. Helix N. 584. t. 91. f. 17. 48.

Ochthephila tumulorum Beck ind. p. 47.

Habitat in promontorio Isletae insulae Canariae inter sepulchreta aboriginum.

568. *H. Bensoni* v. d. Busch.

T. perforata, superne tectiformis, subtus convexa, grisco-albida, acute crenulato-carinata: carina anfractuum superiorum prominente; anfr. $6\frac{1}{2}$ plani, ultimus basi vix striatus; apertura

angulato-lunaris; perist. simplex, basi reflexiusculum. — Diam. maj. 12, min. 10½, alt. 7 mill. (Coll. v. d. Busch.)

Helix Bensoni v. d. Busch in *Phil. Icon.* I. 1. p. 11. t. 1. f. 7.

— — *Pfr. Symb.* II. p. 23.

Habitat in Bengalia.

Obs. Similis *H. detectae* Fér., sed perforata! An var. *H. serrulae* Bens. umbilico angustiore?

569. ***H. cinctella* Draparnaud.**

T. subperforata, subgloboso-depressa, lutescens, crystallina vel rubra, subtilissime striata, opace albo-carinata; anfr. 5½ — 6 planiusculi; apertura lunaris; perist. superne simplex, acutum, margine basali reflexiusculo. — Diam. maj. 12, min. 11, alt. 7½ — 8 mill. (Coll. Nr. 331.)

Helix cinctella Drap. p. 99. t. 6. f. 28.

Hygromia cinctella Risso IV. p. 67.

Bradybaena cinctella Beck ind. p. 18.

Fruticicola cinctella Held in *Isis* 1837. p. 914.

Habitat in Gallia meridionali, Italia, Sicilia, provincia Austriae littorali, prope Tergestum, Fiume!

570. ***H. arridens* Lowe.**

T. perforata, depressa, carinata, tenuis, pallide cornea, rugoso-striatula, hispida; spira vix elevata; anfr. 5 planulati, ultimus basi convexior, antice breviter deflexus; apertura perobliqua, depressa, irregulariter lunaris; perist. acutum, margine dextro simplice, brevi, arcuato, basali strictiusculo, breviter reflexo, perforationem semiocculante. — Diam. maj. 6, min. 5½, alt. 3 mill. (Coll. Nr. 332. Spec. Loweana.)

Helix arridens Lowe Faun. Mader. p. 43. t. 5. f. 9. (auct.)

Habitat in insula Madera.

§. 46.

571. ***H. virgo* (Carocolla) Broderip.**

T. imperforata, superne depressa, subtus inflata, acute carinata, subtiliter striata, nitida, diaphana, albida; anfr. 3½ — 4 planiusculi; columella oblique descendens, basi gibbula; apertura securiformis; perist. simplex, rufum, margine supero recto, basali

vix reflexiusculo. — R. a. = 5:44. — Diam. maj. 35, min. 29, alt. 20 mill. (Coll. Nr. 333.)

Carocolla virgo Brod. in Proc. Zool. Soc. 1841. p. 44.

— — Reeve Conch. syst. II. t. 168. f. 13.

Helix virgo Chemn. ed. II. Helix N. 403. t. 68. f. 4. 2.

Habitat in insula Zebu Philippinarum (Cuming).

572. *H. papyracea* (Carocolla) Broderip.

T. imperforata, depressa, tenuissima, striis longitudinalibus et concentricis subtilissime decussata, pellucida, pallide straminea; spira depressa, planiuscula; anfr. $3\frac{1}{2}$ subplanulati, ultimus basi inflatus, acute carinatus; columella brevis, declivis, strictiuscula; apertura subtrapezia; perist. tenue, simplex, margine supero recto, basali brevissime reflexo, cum columellari dilatato, albo, calloso angulum formante. — Diam. maj. 28, min. 23, alt. 14 mill. (Coll. Nr. 334.)

Carocolla papyracea Brod. in Proc. Zool. Soc. 1841. p. 36.

Helix papyracea Pfr. Symb. III. p. 70.

— — Chemn. ed. II. Helix N. 302. t. 52. f. 11. 12.

— *acutangula* Burr. elem. t. 26. f. 1? (Spec. juv.)

Habitat in insula Mindoro Philippinarum (Cuming).

Obs. Similis *H. reginae* (Nr. 782.), differt columella stricta, perist. superne non expanso, etc.

573. *H. Dryope* (Carocolla) Broderip.

T. imperforata, orbiculato-convexa, tenuis, subtilissime decussata, nitidula, flavescenti-viridis, acute carinata; spira subclevata, apice nigricans; anfr. $4\frac{1}{2}$ subplanulati, ultimus basi planiusculus, antice breviter deflexus; apertura subhorizontalis, angulato-elliptica, ad carinam subcanaliculata; perist. simplex, tenue, margine supero recto, basali breviter reflexo, columellari dilatato, appresso, albo vel nigro. — Diam. maj. 27, min. 23, alt. 13 mill. (Mus. Cuming. et Gruner.)

Carocolla Dryope Brod. in Proc. Zool. Soc. 1841. p. 37.

— — Reeve Conch. syst. II. t. 168. f. 10.

Helix Dryope Chemn. ed. II. Helix N. 312. t. 54. f. 3. 4.

β . Planior, luteo-virens, anfractu ultimo maculis albis obscure guttato, basi flavescente; labii limbo ex albido flavescente.

γ . Fascia lata nigro-rufa supra carinam cincta. (Mus. Cum.)

δ . Minor: diam. maj. 18, min. 15, alt. 9 mill.

Helix prasina Koch in Phil. Icon. I. 7. p. 151. t. 5. f. 1.

— *Dryope* var. Chemn. l. c. t. 54. f. 5. 6.

Habitat in insula Luzon, β in ins. Bureas (Cuming).

574. **H. Webbiana** Lowe.

T. imperforata, subdiscoidea, subtus convexa, acute carinata, tenuis, diaphana, corneo-virescens, minutissime granulata; spira brevis, conoidea, obtusa; anfr. 3 rapide crescentes, vix convexiusculi; apertura ampla, perobliqua, ovalis, intus nitidissima; perist. simplex, acutum, margine columellari arcuato, dilatato, basali breviter reflexo. — Diam. maj. 49, min. 15, alt. 40 mill. (Coll. Nr. 335.)

Helix Webbiana Lowe Faun. Mader. p. 44. t. 3. f. 10.

— — Lam. ed. Dh. 204. p. 125.

— — Chemn. ed. II. *Helix* N. 300. t. 52. f. 5. 6.

— . . . Fér. hist. t. 28 A. f. 7. 8.

Geotrochus Webbiana Beck ind. p. 47.

Habitat in insula Portosancto.

575. **H. detecta** Férussac.

T. imperforata, lenticularis, carinata, fusca, costulato-striata; anfr. $5\frac{1}{2}$ convexi; carina late prominens, in omnibus anfractibus suturae appressa; basis convexa; apertura securiformis; perist. superne simplex, margine basali vix incrassato. — Diam. maj. 44, min. 12, alt. 6 mill. (Coll. Nr. 336.)

Helix detecta Fér. in Mus. Paris.!

— — Pfr. Symb. II. p. 27.

— — Phil. Icon. I. 3. p. 50. t. 3. f. 7.

— — Chemn. ed. II. *Helix* N. 588. t. 92. f. 20. 21.

Caracolla detecta Beck ind. p. 32?

Habitat in insula Bourbon.

576. **H. pyxis** Hinds. †

T. imperforata, elata, diaphana, solidula; anfr. 4 rotundati, ultimus medio carinatus; apertura compresso-lunaris; peritrema acutum, reflexum. (H.) — Diam. maj. 9, alt. $7\frac{1}{2}$ mill. (ex ic.)

Helix pyxis Hinds Voy. Sulph. Moll. III. p. 55. t. 19. f. 10.

Habitat . . . ?

577. **H. climacterica** Benson. †

T. imperforata, subtus tumida; spira subconoidea, gradata; anfr. 8, omnes angulati, supra planati, argute plicati; apex obtusus; periphæria angulata; perist. acutum, non reflexum. — Diam. 0,75 poll. (B.)

Helix climacterica Bens. in Journ. As. Soc. V. p. 352.

Habitat in Bengalia.

Obs «*Similis H. barbatae*».

§. 47.

578. **H. turbo** Pfr.

T. imperforata, turbinata, solidiuscula, distincte striata, sub epidermide tenuissima, decidua, flavescens alba, medio rufofasciata; spira conoidea, obtusa; anfr. 5 planiusculi, ultimus obsolete angulatus, basi vix convexus; columella subverticalis, stricta, dilatata, albida; apertura irregulariter lunaris; perist. expansum, margine columellari dilatato, reflexo, rimam formante, cum basali angulatim juncto. — Diam. maj. 43, min. 33, alt. 35 mill. (Mus. Cuming. et Coll. Nr. 337.)

Helix turbo Pfr. in Proc. Zool. Soc. 1845. p. 64.

— — *Chemn.* ed. II. *Helix* N. 276. t. 48. f. 1. 2.

Habitat in insulis Philippinis.

579. **H. Seckendorffiana** Pfr.

T. imperforata, turbinata, solida, glabriuscula, nitida, castaneo-fulva; spira elevata, apice obtuso coerulea; anfr. 5 convexi, ultimus ventrosus, antice non descendens, basi castaneo-nigricans; columella obliqua, lata, alba, basi subdentata; apertura rotundato-subtetragona, intus albida; perist. subexpansum, fusco-limbatum, margine basali breviter reflexo, cum columella angulum formante. — Diam. maj. 34, min. 29, alt. 32 mill. (Coll. com. de Seckendorff.)

Helix Seckendorffiana Pfr. in Zeitschr. f. Mal. 1847. p. 12.

— — *Chemn.* ed. II. *Helix* N. 303. t. 52. f. 7. 8.

Habitat in insulis Philippinis?

Obs. Differt a praecedente anfractibus convexis, ultimo rotundato, columellae formatione, etc.

580. **H. cinerascens** Pfr.

T. imperforata, globoso-turbinata, tenuiuscula, straminea, fasciis 2 latis areaque basali nigricantibus ornata, epidermide tenui, hydrophana, cinerea induta; spira breviter turbinata, apice obtusa; anfr. 5½ convexiusculi, ultimus basi inflatus; columella subarcuata, carneo-fusca; apertura rotundato-lunaris, intus alba; perist. breviter expansum, subincrassatum, castaneo-limbatum. — Diam. maj. 44, min. 35, alt. 37 mill. (Mus. Cuming.)

Helix cinerascens Pfr. in Proc. Zool. Soc. 1845. p. 64.

Habitat in insula Masbate Philippinarum (Cuming).

Obs. Varietatibus nonnullis Bul. Ticaonici persimilis, forma aperturae distincta.

581. **H. mirabilis** Férussac.

T. imperforata, subglobosa, solida, laevissima, nitida, (sub epidermide olivaceo-lutescente vel brunnea) candida, fasciis rubro-

fuscis vel fulvis et nigricantibus cincta; spira obtusa; anfr. 4 — 5 convexiusculi, ultimus plerumque trifasciatus; sutura marginata; columella emarginata, intrans; apertura ampla, lunato-ovalis, basi effusa; perist. album, margine dextro late reflexo, basali subincrassato, appresso. — Diam. maj. 39, min. 30, alt. 29 mill. (Coll. Nr. 338.)

Helix mirabilis (Helicostyla) Fér. pr. 320. Hist. t. 31. f. 4 — 6.

— — *Chemn.* ed. II. *Helix* N. 288. t. 50. f. 7. 8.

— *chlorogrammica* Val. in Mus. Paris.

Habitat in insula Mindoro Philippinarum (Cuming).

Obs. Variat spira magis minusve elevata, fasciis viridibus solitariis vel anfractum ultimum fere omnino tegentibus.

590. *H. Montfortiana* Pfr.

T. imperforata, turbinata, crassa, ponderosa, nigricanti-rufa, epidermide fusco-cinerea, hydrophana induta; spira conoidea, apice violaceo-purpurascens, nuda, nitida, obtusa; anfr. $4\frac{1}{2}$ vix convexiusculi, ultimus angulatus: angulo antice evanescente; columella declivis, callosa, alba, basi subdentata; apertura subtrigona, intus nitide alba; perist. breviter reflexum, nigro-fusco-limbatum. — Diam. maj. 34, min. 27, alt. 22 mill. (Mus. Cuming.)

Helix Montfortiana Pfr. in Proc. Zool. Soc. 1846. p. 38.

Habitat in insulis Philippinis.

Obs. Characteribus intermedia inter *H. Bruguiercanam* Pfr. et *carbonariam* Sow.

591. *H. Bruguiercana* Pfr.

T. imperforata, turbinato-globosa, solida, nigro-castanea, epidermide hydrophana, fusca, strigata, sursum pallescente obducta; spira conoidea, apice obtusa, purpurea, nitida; anfr. 5 convexiusculi, ultimus basi vix convexus, denudatus; columella

intrans, obliqua, strictiuscula, planata, alba; apertura lunato-ovalis, intus lactea; perist. simplex, brevissime reflexiusculum, intus nigro-marginatum. — Diam. maj. 29, min. 24, alt. 24 mill. (Coll. Nr. 346.)

Helix Bruguiercana Pfr. in Proc. Zool. Soc. 1845. p. 44.

— — Chemn. ed. II. Helix N. 292. t. 44. f. 3. 4.

Habitat in insulis Philippinis.

592. *H. viridis* Deshayes.

T. imperforata, turbinato-globosa, tenuis, laevigata, sub epidermide viridi alba, fasciis variis nigricanti-rufis ornata; spira conoidea, apice obtusiuscula; anfr. $5\frac{1}{2}$ convexiusculi; columella obliqua, strictiuscula; apertura lunato-ovalis; perist. breviter incrassatum, subreflexum, margine columellari dilatato. — Diam. maj. 26, min. $23\frac{1}{2}$, alt. 22 mill. (Coll. Nr. 347.)

Helix viridis Desh. in Lam. ed. Dh. 159. p. 102.

— *Jonasi* β Pfr. in Proc. Zool. Soc. 1845. p. 426.

Habitat in insulis Philippinis.

Obs. Praecedentis var. esse videtur. Formae observantur intermediae.

595. *H. Buschi* Pfr.

T. imperforata, conico-globosa, solidiuscula, tenuiter striata, parum nitida, citrina; spira conoidea, apice obtusiuscula; anfr. $5\frac{1}{2}$ convexiusculi, ultimus rotundatus; columella subobliqua, stricta, dilatata, albo-callosa; apertura rotundato-lunaris, intus nitida, coneolor; perist. tenue, album, breviter expansum, margine basali cum columellari angulum formante. — Diam. maj. 23, min. 20, alt. 23 mill. (Coll. Nr. 349.)

Helix Buschi Pfr. in Proc. Zool. Soc. 1845. p. 426.

— — Chemn. ed. II. Helix N. 293. t. 44. f. 7. 8.

Habitat in insula Mindoro Philippinarum.

596. *H. monticula* Sowerby.

T. imperforata, semiovata, tenuis, oblique striata, flava absque nitore, rufo-fasciata, basi aeruginea; apex obtusus; anfr. $4\frac{1}{2}$ — 5 planulati; sutura linearis; columella tenuis, excavata, arcuata, alba; apertura lunato-ovalis; perist. simplex, reflexiusculum, margine dextro antice subconstricto, antrorsum arcuato. — R. a. = 4 : 5. — Diam. maj. 24, min. 20, alt. 20 mill. (Coll. Nr. 350.)

Helix monticula Sow. in Proc. Zool. Soc. 1840. p. 467.

— — Pfr. Symb. II. p. 34.

— — Deless. recueil t. 38. f. 3.

— — Chemn. ed. II. Helix N. 297. t. 54. f. 13—17.

β. Testa alba, fascia peripherica fusco-viridi.

γ. Testa albida vel lutescente, fasciis articulatis brunneis ornata.

Habitat in insula Luzon (Cuming).

597. *H. balteata* Sowerby.

T. imperforata, elongato-globosa, solida, nitida, pallide sulphurea, zonis viridibus et griseo-violaceis elegantissime notata, apice obtuso plerumque rosea; anfr. 5 convexiusculi; columella lata, perobliqua, superne obsolete tuberculata; apertura lunaris; perist. subincrassatum, vix expansum, extus viride, intus viola-

ceum. — R. a. = 7:43. — Diam. maj. 25½, min. 22, alt. 21 mill. (Coll. Nr. 351.)

Helix balteata Sow. in Proc. Zool. Soc. 1840. p. 136

— — *Deless.* recueil t. 38. f. 2.

— — *Chemn.* ed. II. Helix N. 677. t. 408. f. 9—11.

Habitat in provincia Cagayan insulae Luzon (Cuming).

600. *H. Parraiana* Orbigny.

T. imperforata, globoso-conica, crassa, spiraliter sulcata, fulvo-rubra, zona albida et fusca cincta; spira elevata, conica; anfr. 6½ convexiusculi, ultimus subangulatus, antice gibbus, ad aperturam constrictus; apertura parva, obtuse triangularis; perist. incrassatum, breviter reflexum, margine dextro sinuoso, colu-

mellari strictiusculo, medio introrsum calloso. — Diam. maj. 24, min. 20, alt. 17 mill. (Mus. Cuming.)

Helix Parraiana Orb. moll. cub. I. p. 446. t. 7. f. 7—9. *)

β. Spira magis elata: diam. 19, alt. 21 mill. (O.)

Habitat in insula Cuba.

601. *H. dimidiata* Jan. †

T. imperforata, globosa, striata, nitida; anfr. superiores citrini, infimus niveus; apertura lunata, subobliqua; columella gilva; perist. marginatum, subreflexum, album. — Diam. 1", alt. 1" 3". Apert. diam. long. 5, transv. 6". (Jan.)

Helix dimidiata Jan Mantissa p. 1. N. 28.

Habitat in America meridionali.

Obs. Conf. II. platychela Mke (Nr. 736.), sicana Fér. (Nr. 737.) et candidissima Dr. (Nr. 738.)

§. 49.

602. *H. ignobilis* Sowerby.

T. imperforata, conoideo-globosa, tenuis, striis concentricis minutissimis sculpta, albida, castaneo-bifasciata; spira conoidea, apice obtusiuscula; anfr. 4½ planulati, ultimus obtuse angulatus; columella obliqua, dilatata, alba; apertura lunato-subcircularis; perist. late expansum, margine incrassatum. — R. a. = 5 : 7. — Diam. maj. 29, min. 25, alt. 24 mill. (Coll. Nr. 354.)

Helix ignobilis Sow. in Proc. Zool. Soc. 1840. p. 102.

— — Pfr. Symb. II. p. 30.

— — Chemn. ed. II. Helix N. 283. t. 49. f. 11.

Habitat in insulis Philippinis Romblon, Tablas (Cuming).

603. *H. tenera* Sowerby.

T. imperforata, globoso-conica, tenuis, laevis, alba, fasciis nigricantibus et viridibus ornata, subhyalina; spira depresso-conoidea; anfr. 4½ convexiusculi; columella subrecta, tenuis, subexcavata; apertura lunato-rotundata; perist. simplex, parum expansum. — R. a. = 2 : 3. — Diam. maj. 25, min. 21½, alt. 20 mill. (Coll. Nr. 355.)

Helix tenera Sow. in Proc. Zool. Soc. 1840. p. 102.

— — Pfr. Symb. II. p. 40.

*) T. imperforata, conico-elevata, crassa, transversaliter sulcata, fulvo-rubra, zona albida fusca cincta; spira elevata, conica; anfr. 7 minime convexis, subcarinatis; apertura minima, sinuata; labro margine crasso, undato. — Diam. 24, alt. 22 mill. (Orb. I. c.) — D. m. 21, min. 19, alt. 20 mill. (ex ic.)

Helix tenera Chemn. ed. II. *Helix* N. 284. t. 49. f. 12. 13.

Habitat in insulis Philippinis Mindoro, Tablas (Cuming).

Obs. Differt a praecedente spira brevior, anfractibus convexioribus et peristomate. — Variat spira depressiore.

604. *H. trigonostoma* Pfr.

T. imperforata, trochiformis, tenuis, oblique striatula, lineis nonnullis concentricis impressis notata, alba, fasciis superne linearibus, basi latioribus, fusco-violaceis ornata; spira late conica; anfr. $4\frac{1}{2}$ planiusculi, ultimus spiram superans, obsolete angulatus; columella brevis, callosa; apertura subtriangularis; perist. simplex, margine supero parum expanso, columellari appresso, reflexo. — Diam. maj. 27, min. 22, alt. 18 mill. (Mus. Cuming.)

Helix trigonostoma Pfr. in Phil. Icon. I. 7. p. 154. t. 4. f. 8.

— — Pfr. in Proc. Zool. Soc. 1845. p. 41.

— — Chemn. ed. II. *Helix* N. 282. t. 49. f. 10.

Habitat prope Vera Cruz in prov. Honduras Americae centralis.

Obs. Differt a praecedente spira minus elevata, anfractibus planis, columella brevi et aperturae forma.

605. *H. Dumonti* Pfr.

T. imperforata, coniformis, apice obtusiuscula, albida; anfr. 5 lati, convexiusculi, ultimus basi subplanulatus, ad peripheriam linea nigricante cinctus; columella intrans, obliqua, dilatata; apertura perobliqua, lunato-ovalis; perist. simplex, breviter expansum, margine supero antrorsum arcuato, basali subreflexo. — Diam. maj. 26, min. 21, alt. 24 mill. (Mus. Cuming.)

Helix Dumonti Pfr. in Phil. Icon. II. 41. p. 84. *Helix* t. 7. f. 6.

— — Chemn. ed. II. *Helix* N. 285. t. 49. f. 14. 15.

β ? Minor, apice acutiuscula, anfr. 6, ultimo rubro-bicingulato. — Diam. maj. 22, min. 19, alt. 23 mill. (ex ic.)

Helix coniformis Quoy et Gaim. Astrol. II. p. 105. t. 8. f. 15—17.

Nec Fér.

Habitat in insula Mindoro Philippinarum (Cum.); var. β ? prope portum Carteret Novae Hiberniae (Quoy).

606. *H. coniformis* Férussac.

T. imperforata, orbiculato-conoidea, laevigata, albido-fuscescens, fasciis fuscis saepe articulatis ornata; sutura profunda; anfr. 5 convexi, ultimus basi planiusculus, antice descendens; apertura perobliqua, magna, ovalis; perist. album, tenue, late expansum, marginibus conniventibus, basali reflexo, columellari dilatato, appresso. — Diam. maj. 24, min. 18, alt. 18 mill. (Mus. Cuming.)

Helix coniformis (Helicostyla) Fér. pr. 321. Hist. t. 108. f. 1.

β. Major, albida, rufo-bifasciata: diam. maj. 25, min. 20, alt. 22 mill
(Mus. Cuming)

Habitat in Nova Hibernia ad portum Pralin.

607. *H. conspersula* Pfr.

T. imperforata, turbinata, striatula, opaca, tenuiuscula, straminea vel cinnamomea, punctis albis confertissime conspersa; spira conoidea, apice obtusiuscula, nigricans; sutura mediocris, castaneo-marginata; anfr. 6 convexiusculi, ultimus subangulatus, basi planiusculus; columella obliqua, subarcuata, subexcavata, alba, castaneo-marginata; apertura ampla, lunato-ovalis; perist. simplex, breviter expansum. — Diam. maj. 23½, min. 20, alt. 15 mill. (Spec. max. Mus. Cuming.)

Helix conspersula Pfr. in Proc. Zool. Soc. 1845. p. 124.

— — *Phil.* Icon. II. 11. p. 84. t. 7. f. 4.

Habitat . . . ?

608. *H. Boivini* Petit.

T. imperforata, subtrochiformis, oblique minutissime striata, nitida, albida, fasciis nigro-fuscis varie cineta; spira conica, acutiuscula; anfr. 5 convexiusculi, ultimus antice descendens, basi subplanatus, dilute rufus; apertura perobliqua, lunato-ovalis; columella perobliqua, lata, stricta, alba, supra depresso-planulata; perist. subincrassatum, brevissime reflexum, album, aurantiaco-marginatum. — Diam. maj. 23, min. 19, alt. 18 mill. (Mus. Cuming.)

Helix Boivini Petit in Revue zool. 1844. p. 184.

Habitat in insulis Salomonis.

609. *H. nemoraloides* Adams.

T. imperforata, depresso-turbinata, striatula, laevigata, nitida, albida vel pallide straminea, fasciis 3, linea suturali et area columellari castaneis ornata; anfr. 5 vix convexiusculi, ultimus antice vix descendens; columella intrans, perobliqua, superne dilatata, complanata; apertura oblique lunaris; perist. simplex, acutum, breviter expansum. — Diam. maj. 20, min. 17, alt. 14 mill. (Mus. Cuming. et Coll. Nr. 336.)

Helix nemoraloides Adams in Bost. Proc. 1845. p. 15.

— — *Pfr.* in Zeitschr. f. Mal. 1845. p. 155.

— — *Chemn.* ed. II. *Helix* N. 679. t. 108. f. 5. 6.

Habitat in insula Jamaica.

§. 50.

610. **H. opalina Sowerby.**

T. imperforata, pyramidalis, apico obtusa, tenuis, hyalina, virescenti-albida, laevis, nitida; sutura linearis, albo-marginata; anfr. 6 plani, ultimus obtuse cariuatus; columella tenuis, arcuata, subdentata, sulco obsoleto circumdata; apertura perobliqua, lunato-subcircularis; perist. simplex, vix expansum. — Diam. maj. 24, min. 19, alt. 25 mill. (Coll. Nr. 357.)

Helix opalina Sow. in Proc. Zool. Soc. 1840. p. 98.

— — *Pfr.* Symb. II. p. 35.

— — *Chemn.* ed. II. *Helix* N. 281. t. 49. f. 6. 7.

Habitat in provincia Cagayan insulae Luzon (Cuming).

611. **H. Ferussaci Lesson. †**

T. imperforata, trochiformis, saturate castanea, fascia aurea usque ad apicem ornata, basi plana, acute carinata; spira conica; anfr. 6 plani; sutura levissima; apertura depressa, triangularis; perist. marginatum, reflexum, sinuosum. — Diam. 44 lin., alt. 1 poll. (L.)

Helix Ferussaci Less. voy. de la Coq. Zool. II. p. 345. t. 8. f. 5.

Geotrochus Ferussaci Beck ind. p. 47.

— — *Swains.* Malac. p. 332.

Carocolla pileus Mke syn. ed. II. p. 23?

Habitat in Nova Guinea.

Obs. An modo var. acutius carinata II. pilei? Sed imperforata dicitur.

612. **H. Gaberti Lesson.**

T. imperforata, conoidea, lineis obliquis minutissime subdecussata, pallide flavescens, strigis undatis et flammis fuscis picta; sutura impressa; anfr. 6 planiusculi, ultimus basi angulatus; columella obliqua, dilatata, superne incrassata; apertura subhorizontalis, lunato-elliptica; perist. late expansum, album, marginibus approximatis. — Diam. maj. 26, min. 20, alt. 22 mill. (Mus. Cuming.)

Helix Gaberti Less. voy. de la Coq. II. p. 344.

— *trochus* Quoy et Gaim. Astrol. II. p. 100. t. 8. f. 5—7.

— *trochoides* Lam. ed. Dh. 197. p. 122.

— . . . *Fér.* hist. t. 106. f. 40—12.

Habitat in Nova Guinea (Quoy), Nova Hibernia.

613. **H. rhombostoma Pfr.**

T. imperforata, trochiformis, tenuiuscula, oblique striatula, lineis confertissimis concentricis subdecussata, nitidula, albido-

fulvescens, fasciis castaneis plurimis ornata; spira brevis, conica, apice acuta; anfr. 5 planiusculi, ultimus acute carinatus, basi vix convexus, antice parum deflexus, a latere subcompressus; apertura rhombea; perist. violaceum, margine supero expanso, superne impresso, columellari stricto, dilatato, plano, appresso. — Diam. maj. 28, min. 23, alt. 15 mill. (Coll. Saul. et Metcalfe.)

Helix rhombostoma Pfr. in Proc. Zool. Soc. 1845. p. 72.

Habitat . . . ?

614. *H. lonchostoma* (Carocolla) Menkc.

T. imperforata, orbiculato-conica, acute carinata; sutura linearis; anfr. 6 plani, ad carinam scrobiculato-crenati, ultimus nigricanti-trifasciatus, basi convexusculus, antice subito deflexus; apertura oblique lanceolata; perist. simplex, acutum, margine supero subexpanso, basali breviter reflexo. — Diam. maj. 22, min. 18, alt. 15 mill. (Coll. Nr. 358.)

Carocolla lonchostoma Mke syn. p. 76. ed. 2. p. 127.

Helix lonchostoma Voigt in Cuv. Thierr. III. p. 71.

— — Chemn. ed. II. Helix N. 66. t. 13. f. 5. 6.

Habitat in Brasilia.

Obs. Differt a sequente forma depressa, carinae sculptura et anfractu ultimo deflexo. — Umbilicus juniorum in adultis lamina tenui omnino clausus est.

615. *H. bifasciata* (Trochus) Burrow.

T. imperforata, acute conica, trochiformis, tenuis, diaphana, albida vel rosea, unicolor vel nigricanti-rufo varie cingulata; anfr. 7 plani, ultimus acute carinatus, supra carinam convexusculus, antice non descendens, basi vix convexus; apertura perobliqua, triangularis; perist. simplex, album vel roseum, margine supero expanso, basali reflexo. — Diam. maj. 20, min. 17, alt. 17 mill. (Coll. Nr. 359.)

Trochus bifasciatus Burr. elem. t. 27. f. 2.

Helix bifasciata (Helicigona) Fér. pr. 143.

— — Chemn. ed. II. Helix N. 65. t. 13. f. 1. 2.

— *pyramidella* Wagn. in Spix p. 22.

— — Lam. ed. Dh. 223. p. 134.

— *Blanchetiana* Moric. Mém. Gen. VI. p. 2. t. 1. f. 3. VII. p. 418.

Carocolla bifasciata Gray in Ann. of Phil. New ser. IX. p. 412.

Helicina pyramidella Spix test. bras. t. 16. f. 1. 2.

Geotrochus pyramidella Beck ind. p. 47.

Habitat in Brasilia, Bahia.

616. **H. vitracea Férussac. †**

T. obtecte perforata, globulosa, tenuis, vitracea, carinata; anfr. $4\frac{1}{2}$ convexiusculi; apertura lunato-elliptica; perist. simplex, reflexiusculum. — Diam. maj. 19, min. 16, alt. 14 mill. (ex ic.)

Helix vitracea (Helicigona) Fér. pr. 146. Hist. t. 64. f. 5.

— — Chemn. ed. II. Helix N. 460. t. 76. f. 20. 21.

Geotrochus vitracea Beck ind. p. 48.

Habitat in Nova Hollandia? (Beck.).

Obs. *H. carbonaria* Sow. characteribus plurimis ad hanc sectionem pertinet, sed ab affinis eam separare non volui. (Conf. Nr. 774.)

§. 51.

617. **H. granulata Quoy et Gaimard.**

T. obtecte perforata, globosa, tenuiter granulata, subaurea vel rufescens, fascia fusca cincta; spira brevis; anfr. $3\frac{1}{2}$ planiusculi, ultimus magnus, inflatus; apertura ampla, lunato-elliptica; perist. parum reflexum, album, margine columellari emarginato, valde dilatato, perforationem omnino tegente. — Diam. maj. 50, min. 44, alt. 33 mill. (Mus. Cuming.)

Helix granulata Quoy et Gaim. Astrol. II. p. 95. t. 7. f. 6—9.

— — Lam. ed. Dh. 164. p. 106.

— — Fér. hist. t. 28 A. f. 9. 10.

Habitat ad portum Dorey Novae Guineae.

618. **H. Lessoni Pfr.**

T. obtecte perforata, globulosa, minute striatula, solidula, castanea, basi pallida; spira turbinata, obtusa; anfr. 6 vix convexiusculi, ultimus inflatus, antice deflexus; apertura lunato-rotundata, intus lilacea; perist. undique expansum, album, margine columellari superne perdilatato, calloso, albo, umbilicum prorsus elaudente. — Diam. maj. 35, min. 29, alt. 25 mill. (Spec. Mus. Brit.)

Helix Lessoni Pfr. Symb. III. p. 71.

— *Rangii* Less. voy. de la Coq. p. 305?*) Nec Fér.

Habitat in Australia (Mus. Brit.), in Nova Guinea? (Less.)

619. **H. lueorum Linn.**

T. subobtecte perforata, globosa, substriata, lineis minutissimis subdecussata, castaneo late fasciata et remote strigata;

*) T. suborbiculari, globulosa, ventrosa, imperforata, convexa, minutissime et interrupte striata, viridi-castanea; anfractu ultimo inflato; apertura rotundata; perist. convexo, reflexo, margine sinistro dilatato. — Diam. 18, alt. 13—14 lin. — Affinis melanotrago. (Less. l. e.)

anfr. 5 convexiusculi, ultimus inflatus, antice breviter descendens; apertura lunato-rotundata, intus nitida; perist. obtusatum, simplex, fuscum, marginibus eallo tenuissimo junctis, columellari breviter arcuato, dilatato, reflexo, perforationem fere tegente, basali strietiuseulo, subealoso. — Diam. maj. 50, min. 42, alt. 35 mill. (Coll. Nr. 360.)

Helix lucorum Linn. syst. ed. X. p. 773. ed. XII. p. 1247.

— — Müll. verm. II. p. 46. N. 245.

— . . . Fér. hist. t. 29 A. f. 18 — 24.

α. Pallide fulvida, castaneo-strigata vel fasciata, perist. roseo.

β. Albida, fasciis latis cinereis ornata, margine columellari peristomatis purpurascente.

γ. Castanea, linea 4 peripherica pallida, perist. roseo.

δ. Alba, fasciis nonnullis castaneis ornata, fauce rosea.

ε. Pallide flava, albo-subfasciata, spira elatiore: diam. maj. 43, min. 44, alt. 10 mill. (Mus. Cuming.)

Habitat in India occidentali: Cuba (Lindon), Bermuda.

631. *H. gallopavonis* Valenciennes.

T. subperforata, subglobosa, tenuis, rugulosa, albida, fasciis latis fuscis circumdata et fusco-marmorata; spira conica; anfr. $4\frac{1}{2}$ convexiusculi; apertura lunato-rotundata, intus roseo-labiata; columella latiuscula, expansa, rosea; perist. simplex, subreflexum. — Diam. maj. $44\frac{1}{2}$, min. 42, alt. $9\frac{1}{2}$ mill. (Coll. Nr. 374.)

Helix gallopavonis Val. in Mus. Paris.

— — Pfr. Symb. II. p. 28.

— — Chemn. ed. II. Helix N. 682. t. 409. f. 42. 43.

Habitat in insula St. Croix (Mus. Paris.) et in «Turk's Island» prope S. Domingo (Gruner).

632. *H. flicosta* Pfr.

T. subobtectae perforata, depresso-globosa, regulariter costata (costis filiformibus), tenuiuscula, carneo-albida, lineis fuscis obsoletis cincta; anfr. $4\frac{1}{2}$ convexi, ultimus antice deflexus; apertura lunato-circularis; perist. acutum, intus incrassatum, labiatum, marginibus conniventibus, callo introrsum diffuso roseo junctis,

dextro vix expanso, columellari dilatato, reflexo, roseo. — Diam. maj. 44, min. 43, alt. 9 mill. (Coll. Saul.)

Helix filicosta Pfr. in Proc. Zool. Soc. 1845. p. 73.

Habitat . . . ?

§. 52.

633. *H. undulata* Férussac.

T. imperforata, globosa, solidiuscula, striata, lutescens, lineis fimbriatis confertis inaequalibus fuseis cincta; anfr. $4\frac{1}{2}$ — 5 convexiuseuli, supremi albi, minutissime granulati, ultimus permagnus; apertura rotundato-lunaris, intus margaritacea; perist. candidum, breviter reflexum, margine columellari dilatato, apresso. — Diam. maj. 47, min. 38, alt. 35 mill. (Coll. Nr. 372.)

Helix undulata (Helicogena) Fér. pr. 25. Hist. t. 16. f. 3. 4.

Eurycratera lineolata Beck ind. p. 45.

β. Major: diam. maj. 53, min. 46, alt. 45 mill. (Mus. Cuming.)

Helix undulata var. Fér. t. 16. f. 5. 6.

γ. *Helix litigiosa* Fér. Mus.?

Habitat in insula Haiti.

634. *H. ligata* Müller.

T. imperforata, turbinato-globosa, striata, lineis spiralibus interdum obsolete decussata, fusco-albida, fasciis 5 angustis, subaequalibus, interdum confluentibus, spadiceis ornata; spira elevata, subturbinata; anfr. 4 convexiuseuli, ultimus inflatus, vix descendens; columella obliqua, strictiuscula, carnea; apertura lunato-rotundata; perist. breviter expansum, margine columellari dilatato, diffuso-callosa. — Diam. maj. 43, min. 35, alt. 36 mill. (Coll. Nr. 373.)

Helix ligata Müll. verm. II. p. 58. N. 252. *)

— — Chemn. IX. P. 2. p. 110. f. 128. f. 1137!

*) T. imperforata, subglobosa, alba, fasciis rufis; labro albo. — Gualt. t. 1. f. E. — Diam. 44 lin. — T. striata, luteo-alba, fasciis 5 rufis aequalibus ac fere aequae inter se distantibus; intus alba, fasciis pellucidibus. Apertura subovata; labrum subreflexum, candidum, in centro depressum, dilatatum. Anfr. 4. (Müll. l. c.)

Helix cincta Küster Helix p. 38.

Pomatia ligata Beck ind. p. 43.

Coenatoria ligata Held in Isis 1837. p. 940.

β. Minor, peristomate albido vel fuscule:

Helix ligata var. Rossm. V. f. 290.

γ. Albida, fasciis mediis obsoletis, interruptis, castaneis:

Helix albescens Jan. Rossm. IX. p. 40. f. 585. 86.

Habitat prope Fiume (!), in Italia et Sicilia; in Rossia prope Odessa, in Tauria et Caucaso (Kryn.).

Obs. Cl. Rossmässler var. γ veram *H. ligatam*. Mulleri esse censet, figura autem Chemnitziana omnino cum speciminibus descriptis, prope Fiume lectis, convenit.

635. *H. aspersa* Müller.

T. imperforata, conoideo-globosa, ruguloso-malleata, tenuis, griseo-lutescens, fasciis variis castaneis, flammulisque flavidis ornata; spira brevis, conoidea; anfr. 4 — 4½ convexiusculi, ultimus ventrosus, antice subito deflexus; columella obliqua, leviter arcuata, alba; apertura lunato-ovalis; perist. acutum, expansum, breviter reflexum, marginibus conniventibus, columellari dilatato. — Diam. maj. 44, min. 32, alt. 32 mill. (Coll. Nr. 374. Spec. Fiumens.)

Pomatia Mazzullii Beck ind. p. 44.

β. Fasciis 5 fusciscentibus ornata.

Habitat in Sicilia, in montibus circa Panormum.

637. *H. leytenensis* Pfr.

T. imperforata, globosa, tenuissima, fragilis, laeviuscula, pallide virens, fasciis interruptis, albis, opacis ornata; spira parvula, parum elata; anfract. 4 rapide accrescentes, planiusculi, ultimus permagnus, subangulatus; columella tenuis, subrecta; apertura ampla, rotundato-lunaris; perist. simplex, breviter expansum. — Diam. maj. 30, min. 24, alt. 21 mill. (Mus. Cuming. et Gruner.)

Helix leytenensis Pfr. Symb. III. p. 71.

— — *Chemn. ed. II. Helix* N. 257. t. 42. f. 7. 8.

— *fragilis* Sow. in Proc. Zool. Soc. 1841. p. 40. Nec Pfr.

Habitat in insula Leyte Philippinarum rarissima (Cuming).

* * *

638. *H. grandis* Pfr.

T. imperforata, globoso-turbinata, solida, ponderosa, striata, nigricanti-rufa, epidermide griseo-fusciscente fasciatim obducta;

spira conica, apice pallida; anfr. 6 vix convexiusculi, ultimus spira brevior, basi inflatus, fortius striatus; columella verticalis, brevis, subtorta; apertura late lunaris, intus margaritacea; perist. nigricans, late expansum, margine basali incrassato, reflexo, cum columellari valde dilatato, albido angulum obtusum formante. — R. a. = 44 : 48. — Diam. maj. 68, min. 60, alt. 58 mill. (Mus. Cuming.)

Helix grandis Pfr. in Proc. Zool. Soc. 1845. p. 43.

Habitat prope Bangui prov. Iloconensis insulae Luzon (Cuming).

639. **H. Studeriana Férussac.**

T. imperforata, subglobosa, tenuis, saturate brunnea vel olivacco-fusca, oblique striata et transversim minutissime rugulosa; spira semiglobosa; anfr. 6, summi planulati, eleganter granulati, ultimus inflatus, obsolete angulatus vel sulco impresso ad peripheriam notatus; apertura rotundato-lunaris, intus margaritacea; columella recte descendens, callosa; perist. reflexum, intus album. — Diam. maj. 62, min. 52, alt. 44 mill. (Coll. Nr. 376.)

Helix Studeriana (Helicostyla) Fér. pr. 316. Hist. t. 403. f. 6.

— — Pfr. Symb. I. p. 36.

— — Chemn. ed. II. Helix N. 254. t. 44. f. 4. 2.

Stylodon Studeriana Beck ind. p. 46.

Habitat in insulis Seychellis: Praslin. (Dufo p. 200.)

Obs. Huic proxime affines sunt H. unidentata Chemn. (Nr. 787.) et ceoides Lea (Nr. 786.).

640. **H. turbinoides Broderip.**

T. imperforata, conico-globosa, lineis incrementi oblique striata, viridis, fasciis albis, hydrophanis cingulata, apice saturate fulvo-rubens; spira obtuse conica; anfr. 5 tumidi, ultimus spiram subaequans; columella arcuata, purpureo-fusca; apertura lunato-subovalis, fere circularis, intus nitidissime lactea; perist. simplex, reflexum, brunneo-marginatum. — R. a. = 3 : 5. — Diam. maj. 70, min. 55, alt. 50 mill. (Coll. Nr. 377.)

Helix turbinoides Brod. in Proc. Zool. Soc. 1840. p. 23.

— — Pfr. Symb. II. p. 40.

— — Reeve Conch. syst. II. t. 466. f. 24. 22.

— — Chemn. ed. II. Helix N. 248. t. 39. f. 4. 2.

Chromocochlea turbinoides Hartm. Gast. I. p. 137. t. 44.

Habitat in insula Luzon (Cuming).

Obs. Species inter omnes fere elegantissima. Variat testa tota viridi et ochraceo-brunnea, taeniis nigris et viridibus ornata.

641. **H. sarcinosa** Férussac.

T. imperforata, ovato-globosa, sublaevigata, absque nitore, coloribus varia; spira late conoidea, apice obtusa; anfr. 5 convexiusculi, ultimus magnus, inflatus, interdum obsolete angulatus; columella rosea, subrecta, basi intorta, subtruncata; apertura lunato-subovalis, intus nitide laetea; perist. violacescenti-rubrum, expansum, reflexiusculum, marginibus eallo tenui, nitido, introrsum diffuso, junctis. — R. a. = 5 : 9. — Dimens. variab. (Coll. Nr. 378.)

Helix sarcinosa (Cochlostyla) Fér. pr. 323. Hist. t. 409. f. 4 — 3.

— — Brod. in Proc. Zool. Soc. 1840. p. 121.

— — Reeve Conch. syst. II. t. 463. f. 7.

Orthostylus sarcinosus Beck ind. p. 49.

Bulinus sarcinosus Pfr. Symb. II. p. 50.

α. Virescens, anfractu basali fascia superne subrubra inferne albido-tessellata cincto, columella subrosea, labii limbo roseo vix tincto. — Diam. maj. 68, min. 57, alt. 58 mill. (Spec.)

Helix sarcinosa Chemn. ed. II. Helix N. 247. t. 40. f. 4. 2.

β. Brunneo-virescens, anfractu basali fascia obscura subrubra taenia albida tessellatim interrupta inferne limbata cincto, labii limbo subroseo. — Long. 3, lat. $2\frac{1}{2}$ unc. (Brod.)

γ. Flavo-virens, strigis latis ochraceo-albis, longitudinaliter obliquis picta et fasciis brunneo-virescentibus cincta, labii limbo albo. — Long. $2\frac{1}{2}$, lat. $2\frac{3}{8}$ unc. (Brod.)

δ. Viridi-brunnea, fasciis interruptis ochraceo-albis et nigro-brunneis alternis cincta, labii limbo pallide subroseo. — Diam. maj. 59, min. 53, alt. 54 mill. (Spec.)

Helix sarcinosa var. Chemn. l. c. t. 40. f. 3. 4.

ε. Brunneo-virescens, fasciis subnigricantibus cincta, albido-ochraceo interrupte tessellato-maculata, labii limbo pallide subroseo. — Long. $2\frac{7}{8}$, lat. $2\frac{5}{8}$ unc. (Brod.)

ζ. Ochraceo-alba, fasciis frequentibus castaneo-nigris cincta, labii limbo subrosaceo. — Dimens. uti var. ε. (Brod.)

η. Tota fusca: Fér. t. 409. f. 3.

Habitat in insulis Philippinis, α et β Masbate, γ et δ Guimaras, ε et ζ in insula Negros (Cuming).

Obs. Hoc loco conf. H. cretata Brod. (Nr. 675.)

642. **H. Harfordii** Broderip.

T. imperforata, globoso-subturbinata, substriata, fulva, epidermide libera fusco tessellatim maculata induta, ad peripheriam pallide fasciata; spira subelata, apice obtusa, pallida, nitida; anfr. $4\frac{1}{2}$ vix convexiusculi, ultimus obsolete angulatus; columella obliqua, medio inerassata, earneo-fusea; apertura lunato-ovalis, intus coerulescenti-albida; perist. subincrassatum, breviter reflexum,

carneo- vel fusco-marginatum. — R. a. = 5 : 8. — Diam. maj. 70, min. 58, alt. 48 mill. (Mus. Cuming. et Gruner.)

Helix Harfordii Brod. in Proc. Zool. Soc. 1840. p. 423.

— — Reeve Conch. syst. II. t. 165. f. 15.

— — Pfr. Symb. II. p. 30.

— — Chemn. ed. II. Helix N. 254. t. 42. f. 1. 2.

β . Spira depressa, sursum albescens; anfr. ultimus superne subangulatus, fulvus, fascia lata centrali et maculis irregularibus albidis ornatus: diam. 65, alt. 45 mill. (Mus. Cuming.)

Habitat in insula Negros Philippinarum, var. β rarissima prope Tanhay (Cuming).

643. *H. mindanaensis* Sowerby.

T. imperforata, globoso-conica, solida, oblique rugoso-striata, apice obtuso pallida, luteo-fusca, opaca, maculis variis rufis pellucidis ornata; spira conoidea; anfr. $4\frac{1}{2}$ convexiusculi, ultimus medio obtuse angulatus, infra angulum fascia lata, hydrophana, albida signatus; columella livida, subrecte descendens, medio subintorta; apertura tetragono-ovalis, intus plumbea; perist. subincrassatum, parum reflexum, livido-fuscum, margine supero arcuatim dilatato. — R. a. = 13 : 22. — Diam. maj. 52, min. 43, alt. 42 mill. (Coll. Nr. 379.)

Helix mindanaensis Sow. in sched. Cuming.

— — Pfr. in Proc. Zool. Soc. 1842. p. 85.

— — Pfr. Symb. II. p. 33.

— — Chemn. ed. II. Helix N. 253. t. 44. f. 5. 6.

— *Mindana* Reeve Conch. syst. II. t. 164. f. 8.

Chromocochlea Mindorana Hartm. Gast. I. p. 139. t. 42.

Habitat in insula Mindanao (Cuming).

Obs. Differt ab *H. Harfordii* et affnibus forma conica, maculis pallidis non hydrophanis, sed in ipsa testae substantia positis et margine dextro aperturae sinuato.

644. *H. Pan* Broderip.

T. imperforata, conoideo-globosa, oblique striata, epidermide hydrophana ubique obducta, albida vel fusca, zonis variis fulvis et nigricantibus ornata; spira elata; anfr. 5 planiusculi; columella subrecte descendens, albida, dilatata; apertura lunato-ovalis, intus lactea; perist. anguste reflexum, intus brunneum vel albidum. — R. a. = 13 : 22. — Diam. maj. 52, min. 42, alt. 44 mill. (Coll. Nr. 380.)

Helix Pan Brod. in Proc. Zool. Soc. 1841. p. 23.

— — Pfr. Symb. II. p. 36.

— — Reeve Conch. syst. II. t. 165. f. 19.

Helix Pan Deless. recueil t. 38. f. 9.

— — *Chemn.* ed. II. *Helix* N. 249. t. 39. f. 5—7.

Habitat in insula Bohol Philippinarum (Cuming).

Obs. Differt a praecedente epidermide, anfractu ultimo non angulato, colore et forma columellae et aperturae.

645. **H. Cailliaudi Deshayes.**

T. imperforata, depresso-globosa, solida, longitudinaliter ruguloso-striata, lineis concentricis impressis nonnullis notata, luteo-fulva, fasciis 2 nigro-castaneis, pluribusque angustis epidermidis albidae hydrophanae cineta; spira brevis, apice obtusa; anfr. 5, supremi planulati, reliqui convexi, ultimus magnus, basi subplanulatus, concentrice sulcatus, antice paululum descendens: columella obliqua, lata, alba, exaevata; apertura ampla, perobliqua, lunato-obovalis, intus nitide alba; perist. late expansum, breviter reflexum, album. — Diam. maj. 58, min. 46, alt. 37 mill. (Mus. Cuming. et Gruner.)

Helix Cailliaudi Desh. in Guérin mag. 1839. t. 5.

— — *Chemn.* ed. II. *Helix* N. 255. t. 42. f. 3. 4.

β. Unicolor, fuscidula:

Helix ferruginea Lea Philad. tr. 1844. p. 464. t. 42. f. 17.

γ. Minor, fusca, albo-zonata, apice alba: diam. maj. 44, min. 35, alt. 28 mill. (Mus. Cuming.)

Habitat in insula Luzon, var. γ in ins. Mindanao (Cuming).

646. **H. chlorochroa Sowerby.**

T. imperforata, subglobosa, tenuiuseula, fulvida vel pallide brunnea, albo-marmorata et strigata, epidermide cinereo-fuscescente induta; spira semiglobosa; anfr. $4\frac{1}{2}$ convexiusculi, ultimus ad peripheriam obsolete angulatus; columella oblique areolata, denticulata; apertura rotundato-lunaris; perist. subincrassatum, expansum, fuscum. — R. a. = 44 : 20. — Diam. maj. 50, min. 42, alt. 34 mill. (Coll. Nr. 381.)

Helix chlorochroa Sow. in Proc. Zool. Soc. 1844. p. 2.

— — *Pfr. Synb.* II. p. 25.

— — *Chemn.* ed. II. *Helix* N. 264. t. 44. f. 1. 2.

Habitat in insula Bohol Philippinarum (Cuming).

647. **H. Fraseri Gray.**

T. imperforata, globoso-turbinata, solidiuscula, leviter striata, fulva, fasciis variis nigricanti-brunneis ornata; spira late conoidea; anfr. $6\frac{1}{2}$ convexiusculi, ultimus antice paululum desflexus; apertura lunato-ovalis, intus nitide livida; perist. late expansum, reflexiusculum, intus violaceum, marginibus callo tenui junctis,

dextro arcuato, columellari superne valde dilatato. — Diam. maj. 55, min. 45, alt. 39 mill. (Mus. Cuming.)

Helix Fraseri Gray in Proc. Zool. Soc. 1836. p. 63.

— — Pfr. Symb. II. p. 23.

— — Reeve Conch. syst. II. t. 164. f. 9.

Habitat in insula Tablas Philippinarum (Cuming).

Obs. Multimode variat magnitudine, colore testae et apicis, nec non labri. Interdum fasciae adsunt nigricanti-rufae, quare Cl. Sowerby sex varietates enumeravit, quarum tertia (var. c.) cum *H. speciosa* a Cl. Jay prius delineata identica est.

652. *H. sphaerion* Sowerby.

T. imperforata, globulosa, tenuiuscula, striatula, luteo-fulva, epidermide non nitente, tenuissima induta; spira semiglobosa, apice obtuso alba, nitida; sutura pallide marginata; anfr. 4—5, supremi planulati, ultimus inflatus; columella tenuis, arcuata, subexcavata, alba; apertura lunato-ovalis, intus lactea, antice fuscicula; perist. simplex, vix expansiusculum, margine supero antrorsum arcuato. — Diam. maj. 40, min. 35, alt. 34 mill. (Mus. Cuming. et Gruner.)

Helix sphaerion Sow. in Proc. Zool. Soc. 1844. p. 2.

— — Chemn. ed. II. Helix N. 256. t. 42. f. 5. 6.

β. Saturate brunnea, apice violacea.

γ? Superne pallide fuscescens, basi saturate castanea, apertura majore. (Mus. Cuming.)

Helix sphaerion var.? Phil. Icon. III. 17. Helix t. 40. f. 2.

Habitat in insulis Leyte et Mindoro Philippinarum (Cuming).

Obs. Differt ab *H. speciosa* praecipue peristomate vix expanso.

653. *H. Roissyana* Férussac.

T. imperforata, subglobosa, crassiuscula, laevis, varie colorata, epidermide hydrophana plerumque obducta; spira obtusissima; anfr. 5 convexiusculi, ultimus ventrosus; columella declivis, strictiuscula, plana; apertura sublunaris, intus alba; perist. expansum, nigro-marginatum. Diam. maj. 37, min. 32, alt. 30 mill. (Coll. Nr. 386.)

Helix Roissyana (Helicostyla) Fér. pr. 349 ter. Hist. t. 104. f. 2. 3.

— — Desh. in Encycl. méth. II. N. 449. p. 265. *)

*) T. orbiculato-conoidea, turbiniformi, apice obtusa, laevigata, fasciis fuscis variabilibus ornata; anfr. 5—6; apertura subsemilunari; columella recta, lata, depressa, alba; labro obtuso, nigro, vix reflexo. — Diam. bas. 32 mill. (Desh. I. c.)

Helix Roissiana Sow. in Proc. Zool. Soc. 1840. p. 101.

Helicostyla Roissiana Beck ind. p. 37.

β . Var.? *Helix* . . . Fér. hist. t. 107. f. 44—43.

Habitat in insula Mindoro Philippinarum (Cuming).

Obs. Variat testa alba, epidermide flavescente obducta, varie nigricanti-fasciata, vel saturate castanea, epidermide crassa, opaca, hydrophana — vel fere tota nigra etc.

554^a *Hel. Moreleti* Pfr. in Zool. July. 118. 1848

654. *H. pulcherrima* Sowerby.

T. imperforata, subglobosa, unicolor vel coloribus variis pulchre picta, plerumque epidermide albida elegantissime reticulato-fasciata; spira parvula, obtuse conoidea, apice nitide sanguinea; anfr. $4\frac{1}{2}$ convexi, ultimus valde inflatus, ad columellam excavatus; columella obliqua, albido-callosa, superne obsolete undentata; apertura lunato-circularis, intus nitidissima; perist. simplex, expansum. — R. a. = 4 : 7. — Diam. maj. 42, min. 33, alt. 29 mill. (Coll. Nr. 387.)

Helix pulcherrima Sow. in Proc. Zool. Soc. 1840. p. 90.

— — Reeve Conch. syst. II. t. 164. f. 42. 43.

— — Pfr. Symb. II. p. 37. (exclus. var. β .)

— — Deless. recueil t. 38. f. 44. 42. 45. 46.

— — Chemn. ed. II. *Helix* N. 264. t. 45. f. 4—4.

Calocochlea pulcherrima Hartm. Gast. I. p. 463. t. 54.

Habitat in provincia Cagayan insulae Luzon (Cuming).

Obs. Varietates 44 praecipuae a Cl. Sowerby l. c. enumeratae differunt colore testae saturate castaneo, rufo, cinnamomeo, fulvo, virescente, roseo vel flavo — fasciis solitariis vel approximatis, continuis vel reticulatis — peristomate albo, roseo vel purpureo-limbato. Fascia latior peripherica epidermidis albae fere in omnibus adest.

655. *H. Norrisii* Sowerby.

T. imperforata, globoso-depressa, solida, obsolete malleata, glabra, fulvo-citrina, zonis opacis, candidis et infra suturam maculis irregularibus albis notata; spira semiglobosa; anfr. $4\frac{1}{2}$ convexi, ultimus ad columellam latam, callosam, arcuatim prolongatam excavatus; apertura lunato-subcircularis, intus lactea; perist. crassum, latissime expansum. — R. a. = 4 : 2. — Diam. maj. 42, min. 34, alt. 28 mill. (Coll. Nr. 388.)

Helix Norrisii Sow. in sched. Cuming.

— — Pfr. in Proc. Zool. Soc. 1842. p. 85.

— — Pfr. Symb. II. p. 34.

Helix Norrisii Chemn. ed. II. Helix N. 267. t. 46. f. 1. 2.

Habitat in insulis Luzon et Mindanao (Cuming).

Obs. Intermedia inter *H. pulcherrimam* et *zoniferam*, ab illa spira depressa et columella arcuata, ab altera columella excavata, nec angulata distinguenda.

/ 656. **H. zonifera** Sowerby.

T. imperforata, subglobosa, tenuis, fulva, zonis variis opacis, lutescenti-albidis ornata, obsolete angulata; anfr. 4 convexi, supremi depressi; columella plana, recta, elongata; apertura lunato-rotundata, intus nitida; perist. simplex, expansum, album, cum callo columellari angulatim junctum. — R. a. = 4 : 2. — Diam. maj. 40, min. 33, alt. 27 mill. (Coll. Nr. 389.)

Helix zonifera Sow. in sched. Cuming.

— — Pfr. in Proc. Zool. Soc. 1842. p. 85.

— — Pfr. Symb. II. p. 42.

— — Reeve Conch. syst. II. t. 465. f. 17.

— — Chemn. ed. II. Helix N. 268. t. 46. f. 3. 4.

β. Tenuissima, luteo-virens, basi unicolor, ad peripheriam fascia lata nigricante et angustiore albida, superne fasciis pluribus albis interruptis ornata.

γ. Rufo-nigricans, fasciis variis sordide albidis.

δ. Crassiuscula, cinnamomea, fasciis lutescenti-albidis.

ε. Major, fulva, fascia nigricante, albido-maculata ad suturam, et latissima, medio alba, ad peripheriam. — Diam. maj. 46, min. 37, alt. 33 mill. (Mus. Cuming.)

Habitat in insulis Philippinis, α et β Leyte, γ et δ Samar, ε Mindanao (Cuming).

Obs. Differt ab *H. pulcherrima* spira depressa, anfractu ultimo minus inflato, et columella neque excavata, neque dentata.

/ 657. **H. decipiens** Sowerby.

T. imperforata, subglobosa, tenuis, laevis, non nitens, pelucida, fulva vel sulphurea, epidermide hydrophana alba strigata et fasciata; spira subelata; anfr. 4 rotundati; columella alba, subarcuata; apertura lunato-subcircularis, intus lactea; perist. expansum. — R. a. = 4 : 2. — Diam. maj. 35, min. 28, alt. 25 mill. (Coll. Nr. 390.)

Helix decipiens Sow. in Proc. Zool. Soc. 1840. p. 96. (excl. var. plur.)

— — Pfr. Symb. II. p. 27.

— — Chemn. ed. II. Helix N. 265. t. 45. f. 5. 6.

α. Cinnamomea, albo-strigata et medio unifasciata. (Mus. Cuming.)

β. Sulphurea, albo-strigata et albo-1—2-fasciata. (Spec.)

γ. Unicolor straminea. (Spec.)

Habitat in insulis Philippinis Luzon et Capul (Cuming).

Obs. 1. Differt ab *H. pulcherrima* apertura minus transversa, subelongata, columella non excavata, perist. expanso, non reflexo, etc.

Obs. 2. Varietates nonnullae *H. mirabilis* saepe cum nostra specie confusae sunt, ex descriptione Sowerbyana emendata facile dignoscendae. (Conf. Pfr. Symb. II. p. 27.)

658. *H. dubiosa* Pfr.

T. imperforata, depresso-globosa, tenuis, obsolete malleata, fulva, fascia suturali et area columellari nigro-rufis, fasciisque plurimis epidermidis hydrophanae albidae ornata; spira subsemi-globosa; anfr. 4 convexiusculi, celeriter accrescentes; columella intrans, planulata, declivis; apertura lunato-rotundata, intus margaritacea; perist. tenue, album, late expansum, vix reflexiusculum, margine basali cum columella angulum obsoletum formante. — Diam. maj. 35, min. 28, alt. 26 mill. (Coll. Nr. 391.)

Helix dubiosa Pfr. Symb. III. p. 71.

— — Pfr. in Proc. Zool. Soc. 1845. p. 123.

— — Chemn. ed. II. *Helix* N. 269. t. 46. f. 5. 6.

— *decipiens* var. c et d Sow. Proc. Zool. Soc. 1840. p. 97.

— — Reeve Conch. syst. II. t. 465. f. 16.

— — var. *Deless.* recueil t. 38. f. 40.

β. Fasciis 2 negricantibus ad peripheriam.

γ. Fasciis periphericis latis, interstitio albido. (Coll. Gruner.)

Habitat in insula Samar Philippinarum (Cuming).

659. *H. luzonica* Sowerby.

T. imperforata, conico-globosa, crassiuscula, oblique striata, rufa, apice sanguinea, epidermide liberea fere omnino tecta, medio fascia lata, albida ornata; spira conoidea; anfr. 5—5½ convexiusculi; columella obliqua, dilatata, tuberculosa; apertura lunato-circularis, intus lactea; perist. incrassatum, late reflexum, albo vel purpureo late limbatum. — R. a. = 5:7. — Diam. maj. 43, min. 34, alt. 30 mill. (Coll. Nr. 392.)

Helix luzonica Sow. in sched. Cuming.

— — Pfr. Symb. II. p. 32.

— — Pfr. in Proc. Zool. Soc. 1842. p. 85.

— — Reeve Conch. syst. II. t. 465. f. 20.

— — Chemn. ed. II. *Helix* N. 266. t. 45. f. 7. 9. 10.

β. Minor, unicolor, lacte castanea, non nitens, apice sanguinea: diam. maj. 39, min. 30, alt. 28 mill. (Spec.)

Helix pulcherrima var. *Cuming* in sched.

Helix pulcherrima β Pfr. Symb. II. p. 37.

— *luzonica* var. Chemn. l. c. t. 45. f. 8.

γ. Minor: diam. maj. 34, min. 26, alt. 23 mill. (Spec.)

Helix luzonica var. Chemn. l. c. t. 45. f. 44.

Habitat in insula Luzon (Cuming).

Obs. Differt ab *H. pulcherrima* testa crassa, conoidea, anfractuum lentius accrescentium numero, columellâ vix excavata et labro incrassato.

660. *H. obtusa* Pfr.

T. imperforata, subglobosa, tenuis, striis incrementi et lineis impressis concentricis obsoletis subdecussata, nitida, laete castanea; spira subelevata, obtusa; anfr. 4 convexi, ultimus inflatus; columella obliqua, acuta, alba; apertura dilatata, subauriformis, intus margaritacea; perist. simplex, expansum. — R. a. = 5 : 8 — Diam. maj. 35, min. 29, alt. 26 mill. (Mus. Cuming.)

Helix obtusa Pfr. in Proc. Zool. Soc. 1845. p. 38.

β. Alba, minor: diam. maj. 30, min. 24, alt. 20 mill. (Mus. Cum.)

Habitat in insula Luzon (Cuming).

661. *H. unica* Pfr.

T. imperforata, globosa, solidiuscula, oblique striatula, albida; sutura profunda; anfr. 5½ inflati, supremi planiusculi; columella profunde intrans, arcuata, subcanaliculata; apertura perobliqua, subcircularis, intus alba; perist. late expansum, intus fulvidum, marginibus approximatis, basali incrassato. — R. a. = 43 : 20. — Diam. maj. 38, min. 34, alt. 49 mill. (Mus. Cuming.)

Helix unica Pfr. in Proc. Zool. Soc. 1842. p. 151.

Habitat prope Samboanga insulae Mindanao (Cuming).

Obs. Forma accedit ad *H. mammillam* Fér., a qua differt testa omnino imperforata, laeviuscula etc.

662. *H. collodes* Sowerby.

T. imperforata, subsemiglobosa, tenuis, alba, epidermide fusco-lutescente, nitida induta, apice carnea; sutura distincta, rufo-marginata; anfr. 5 convexiusculi, ultimus basi subplanulatus; columella brevis, obliqua, tenuis; apertura rotundato-lunaris, intus alba; perist. expansum, subincrassatum, nigricans. — R. a. = 5 : 8. — Diam. maj. 32, min. 27, alt. 22 mill. (Coll. Nr. 393.)

Helix collodes Sow. in Proc. Zool. Soc. 1840. p. 102.

— — Pfr. Symb. II. p. 25.

— — Chemn. ed. II. *Helix* N. 676. t. 408. f. 7. 8.

Habitat in insula Tablas Philippinarum (Cuming).

— 663. **H. tephrodes Pfr.**

T. imperforata, subglobosa, solida, ponderosa, superne rufa, strigis latis epidermidis cinerea hydrophanac fere obtecla, basi straminea, rufo-fasciata; anfr. $4\frac{1}{2}$ convexi, supremi depressi, rotundati, rufescentes; columella lata, alba, subarcuata; apertura lunato-subcircularis, intus alba; perist. simplex, reflexum. — R. a. = 44 : 20. — Diam. maj. 37, min. 33, alt. 30 mill. (Mus. Cuming. et Coll. Nr. 394. jun.)

Helix tephrodes Pfr. in Proc. Zool. Soc. 1842. p. 151.

Habitat in provincia Pangasinon insulae Luzon (Cuming).

Obs. Variat zonis alternantibus latis rufis et flavidis sub epidermide strigata.

— 664. **H. Butleri Pfr.**

T. imperforata, globosa, tenuiuscula, laevis, apice obtuso alba; spira semiglobosa; sutura mediocris; anfr. $4\frac{1}{2}$ planiusculi, ultimus inflatus, pallide lutescens, lineis confertis, fuscis, interruptis ornatus; columella subrecta, lata, profunde intrans; apertura rotundato-lunaris; perist. simplex, album, margine dextro vix expanso, basali subincrassato, cum columella angulum obtusum formante. — Diam. maj. 37, min. 31, alt. 28 mill. (Mus. Cuming.)

Helix Butleri Pfr. in Proc. Zool. Soc. 1842. p. 87.

— *crispata* Fér. ? Pfr. Symb. II. p. 26.

β. Minor: diam. maj. 34, min. 26, alt. 22—23 mill. (Coll. Nr. 395.)

Helix Butleri Phil. Icon. I. 4. p. 80. t. 4. f. 12.

— — Chemn. ed. II. *Helix* N. 273. t. 47. f. 11. 12.

γ. Solida, epidermide lutescente obducta, area columellari interdum nitide nigricante.

Habitat in insula Luzon (Cuming).

665. **H. languida Pfr.**

T. imperforata, globosa, tenuiuscula, regulariter et confertim oblique striata, apice obtuso lutescens; sutura linea fusca, nitida notata; anfr. $4\frac{1}{2}$ convexiusculi, ultimus rufus, epidermide hydrophana cinerascens indutus, albo-lineolatus, basi nudus, nitidus; columella verticalis, albo-callosa; apertura subovalis; perist. . . — R. a. = 5 : 8. — Diam. et alt. 30 mill. (Mus. Cuming.)

Helix languida Pfr. in Proc. Zool. Soc. 1842. p. 150.

Habitat in insula Siquijor, ubi in foliis palmarum nonnisi 2 specimina incompleta legit Cl. Cuming.

Obs. Affinis videtur varietatibus quibusdam H. metaformis.

666. **H. rectusa** Pfr.

T. imperforata, subglobosa, apice rectusa, tenuis, laevigata, basi concentricè striolata, castaneo-fulva, albo late strigata et flammulata, epidermide hydrophana, albida, decidua partim induta, sursum pallescens, castaneo-fasciata; spira brevis; anfr. 4 convexiusculi, ultimus subangulatus, vix descendens; columella intrans, alba, superne dentato-dilatata; apertura rotundato-lunaris, intus margaritacea; perist. late expansum, reflexiusculum. — Diam. maj. 28, min. 24, alt. 20 mill. (Mus. Cuming. et Gruner.)

Helix rectusa Pfr. in Proc. Zool. Soc. 1845. p. 132.

— — *Phil. Icon.* II. 11. p. 84. t. 7. f. 2.

— — *Chemn. ed.* II. *Helix* N. 274. t. 47. f. 9. 10.

Habitat in insula Samar Philippinarum (Cuming).

667. **H. sphaerica** Sowcrby.

T. imperforata, globosa, oblique irregulariter rugulosa, flava, haud nitens, fascia nivea ad suturam, saturate rufa ad peripheriam ornata, interdum fusco-strigata; anfr. $4\frac{1}{2}$ convexiusculi, ultimus juxta aperturam constrictus; columella lata, alba, subtuberosa, area nigricante circumdata; apertura lunato-circularis, intus nitide nivea; perist. reflexum, nigro-marginatum. — R. a. = 5 : 11. — Diam. maj. 26, min. 23, alt. 18 mill. (Coll. Nr. 396.)

Helix sphaerica Sow. in Proc. Zool. Soc. 1844. p. 26.

— — *Deless. recueil* t. 38. f. 1.

— — *Chemn. ed.* II. *Helix* N. 250. t. 39. f. 3. 4.

Habitat in insulis Luzon et Zebu (Cuming).

668. **H. mandarina** Gray.

T. imperforata, turbinato-globosa, solida, striata, castanea; spira elata, conoidea, apice obtusa; anfr. $5\frac{1}{2}$ convexi, ultimus pallide cingulatus, interdum medio subangulatus; sutura profunda; apertura late rotundato-lunaris; perist. subincrassatum, margine supero vix expanso, basali et columellari dilatato, arcuato, carneo. — Diam. maj. 27, min. 23, alt. 20 mill. (Mus. Cuming.)

Helix mandarina Gray Zool. of Beech. voy. p. 143. t. 38. f. 3.

β. Spira elatiore, apertura magis rotundata: diam. maj. 25, min. $22\frac{1}{2}$, alt. 23 mill. (Mus. Cuming.)

Helix mandarina var. *Gray* Zool. of Beech. voy. t. 34. f. 2.

Habitat Loo-Choo (Gray).

669. **H. strobilus** Férussac.

T. imperforata, conico-globosa, oblique striata, nitida, nigricans, interdum cingulo lato fusco circumdata, circa columellam

area flava, rubro-cincta ornata; anfr. $5\frac{1}{2}$ convexi, ultimus basi planulatus, antice deflexus; apertura lunato-ovalis; columella lata, alba, intrans, excavata; perist. album, reflexum, margine columellari declivi. — Diam. maj. 26, min. 22, alt. 20 mill. (Coll. Nr. 397.)

Habitat in insulis Sandwich, teste Jay catal.

Obs. 1. E rarissimis! Specimina temporibus recentioribus non allata esse videntur.

Obs. 2. Conf. hoc loco H. Waltoni Reeve (Nr. 7).

672. *H. extensa* Müller.

T. imperforata, subglobosa, lincis elevatis circumdata, rugoso-malleata, sub epidermide decidua fuscescens alba; spira brevis, obtusa; anfr. 4 planulati, ultimus convexus, subcarinatus; apertura perobliqua, lunato-ovalis; columella lata, plana, leviter arcuata; perist. reflexum, tenue, margine dextro repando. — Diam. maj. 38, min. 32, alt. 28 mill. (Mus. Cuming.)

Helix extensa Müll. verm. II. p. 60. N. 254. *)

— — Lam. 18. p. 70. ed. Dh. p. 37.

— — Fér. pr. 24. Hist. t. 16. f. 1. 2?

Eurycratera extensa Beck ind. p. 46.

Habitat in insulis Moluccis? (Beck.)

673. *H. latitans* Broderip.

T. imperforata, globoso-depressa, solida, longitudinaliter striata, sulcis concentricis obsolete notata, atrorufescens, epidermide tenui, flavescens-grisca induta, medio rufo-fasciata; spira brevis, nuda; anfr. 4 convexusculi, ultimus obsolete angulatus; columella declivis, lata, plana, fusco-carnea; apertura perobliqua, lunato-ovalis, intus nitida, livida; perist. intus fusco-carneum, late expansum, tenuiusculum, vix reflexum, marginibus callo nitido junctis, supero arcuato, basali cum columellari angulum formante. — Diam. maj. 67, min. 53, alt. 44 mill. (Coll. Nr. 399.)

Helix latitans Brod. in Proc. Zool. Soc. 1844. p. 3.

— — Reeve Conch. syst. II. t. 165. f. 18.

*) T. imperforata, subglobosa, pallida, immaculata, apertura ampla. — Diam. 46 lin. — Facies H. pomatiae, at spira (anfract. superiores simul sumti) minus prominens; apertura repanda, seu extremitas anfractus magis protensa, anfractusque quatuor. Foramen labio perfecto obturatum; labrum nullum. — In Museo Spengleriano. (Müll. l. c.)

Helix latitans Deless. recueil t. 38. f. 3.

— — Chemn. ed. II. Helix N. 259. t. 43. f. 3. 4.

Habitat in insula Bohol Philippinarum (Cuming).

✓ 674. **H. cryptica** Brodcrip.

T. imperforata, globoso-depressa, solida, striata, rugis obliquis sculpta et lineis elevatis cincta, purpureo-brunnea, epidermide fuseula induta; spira brevis, nuda; anfr. 4 convexiusculi, ultimus medio angulatus, antice descendens; columella declivis, valde dilatata, carnea; apertura perobliqua, lunato-ovalis, intus argenteo-coerulescens; perist. late expansum, incrassatum, reflexum, carneo-lividum. — Diam. maj. 66, min. 53, alt. 42 mill. (Coll. Nr. 400.)

Helix cryptica Brod. in Proc. Zool. Soc. 1844. p. 22.

— — Pfr. Symb. II. p. 26.

— — Chemn. ed. II. Helix N. 258. t. 43. f. 1. 2.

Habitat in insula Samar Philippinarum (Cuming).

Obs. Differt ab *H. latitante* rugis obliquis, epidermide fuscescente, peristomate crasso, margine supero magis deflexo.

675. **H. cretata** Brodcrip.

T. imperforata, depresso-globosa, solida, sub epidermide griseo-flavida saepe obscure zonata, nitide atro-rufescens; spira subelevata, semiglobosa, strigis epidermidis variegata; anfr. 4 convexi, ultimus lineis elevatis, concentricis cinctus et irregulariter malleatus; columella declivis, strictiuscula, dilatata, plana, alba vel rubella; apertura ampla, lunato-ovalis, intus margaritacea; perist. late expansum, reflexum, margine supero arcuato, basali cum columellari angulum obtusum formante. — Diam. maj. 66, min. 54, alt. 46 mill. (Mus. Cuming.)

Helix cretata Brod. in Proc. Zool. Soc. 1844. p. 23.

Habitat in insula Leyte Philippinarum (Cuming).

Obs. Differt ab *H. latitante* et *cryptica* forma globosa, spira elatiore et sculptura.

676. **H. cognata** Férussac.

T. imperforata, depressa, solida, transverse ovata, oblique striata, obsolete granulosa, nitida, spadiceo-fulvescens, punctis rufis irregulariter aspersa; spira brevissima; anfr. 4 planiusculi, ultimus interdum medio pallide cingulatus, basi albus, inflatus, antice breviter deflexus; apertura perobliqua, transverse ovalis, intus nitida, livida; perist. album, crassum, breviter reflexum,

margine columellari dilatato, appresso, excavato. — Diam. maj. 54, min. 38, alt. 30 mill. (Coll. Saul. et Walton.)

Helix cognata (Helicogena) Fér. pr. 76. Hist. t. 44. f. 4.

— — Pfr. Symb. III. p. 72.

— — Chemn. ed. II. Helix N. 260. t. 43. f. 5. 6

Habitat in insulis Antillis? (Fér.)

Obs. Tria vidi specimina in collectionibus Londinensibus prorsus aequalia, forma ad *H. asperam* Fér. accedentia, sculptura et apertura edentula facile distinguenda.

677. *H. ponderosa* Pfr.

T. imperforata, globoso-depressa, tumida, solida, ponderosa, laeviuscula (striis incrementi et concentricis confertissimis vix conspicuis), alba, basi epidermide nitida, pallide cornea induta; anfr. $4\frac{1}{2}$ convexiusculi, ultimus subangulatus, fasciis albis hydrophanis infra angulum interdum obsolete notatus; columella recta, lata, perobliqua; apertura subauriformis, intus alba; perist. late reflexum. — R. a. = 1 : 2. — Diam. maj. 46, min. 34, alt. 27 mill. (Coll. Nr. 404.)

Helix ponderosa Pfr. in Proc. Zool. Soc. 1845. p. 38.

— — Chemn. ed. II. Helix N. 675. t. 408. f. 3. 4.

— . . . Fér. hist. t. 28 A. f. 5. 6.

Habitat in provincia Iloconensi insulae Luzon (Cuming).

Obs. Forma *H. latitanti* similis, differt magnitudine, colore et sculptura minutissima.

678. *H. lignaria* Pfr.

T. imperforata, subgloboso-depressa, solida, laevigata, castanea, fasciis variis epidermidis hydrophanae, fusco-cinereae obducta; spira vix elevata, obtusa; anfr. $4\frac{1}{2}$ vix convexiusculi, celeriter accrescentes, ultimus ad peripheriam subangulatus; columella strictiuscula, perobliqua, lata, planata, fusca; apertura rotundato-lunaris, intus albida; perist. subincrassatum, brevissime reflexum, fusco-marginatum. — Diam. maj. 45, min. 36, alt. 27 mill. (Mus. Cuming.)

Helix lignaria Pfr. in Proc. Zool. Soc. 1846. p. 111.

Habitat prope Surigao insulae Mindanao.

Obs. Differt ab *H. melanocheila* Val. spira depressa et columella obliqua, ab *H. matrueli* Sow. spira depressiore, columella non dentata, etc.

679. *H. matruelis* Sowerby.

T. imperforata, globoso-depressa, tenuiuscula, oblique striata, nigricans, epidermide fusco-cinerea hydrophana induta; area columellaris nitide lutea, fascia nigricante circumdata; spira parum

elata; sutura levis; anfr. 4, supremi complanati; columella oblique, valide (interdum obsoletius) dentata, extrorsum dilatata, brunnea; apertura subtrapezoidalis, intus livida; perist. incrassatum, expansum, brunneo-marginatum. — R. a. = 2 : 3. — Diam. maj. 38, min. 31, alt. 24 mill. (Coll. Nr. 402.)

Helix matruelis Sow. in Proc. Zool. Soc. 1841. p. 24.

— — *Deless.* recueil t. 38. f. 7.

— — *Chemn.* ed. II. Helix N. 307. t. 53. f. 8—11.

Habitat in insulis Bohol, Capul, Negros, Siquijor (Cuming).

Obs. 1. Variat colore albedo, citrino, roseo, sulphureo vel cinnamomeo, fasciis interdum nullis, plerumque 3 pallide rufis vel nigricantibus, peristomate albo aut rufo vel roseo-marginato. (Conf. var. 42 a Cl. Sowerby l. c. enumeratae.)

Obs. 2. Persimilis sequenti; differt anfractibus convexioribus, sensim aerescentibus, ultimo inflato, apertura lateraliter non dilatata, perist. vix reflexo.

✓ 686. **H. Valenciennesii Eydoux.**

T. imperforata, globoso-depressa, tenuis, diaphana, nitidula, minute striata, alba; spira parva, superne depressa; sutura linearis, superne rufo-marginata; anfr. 4 planiusculi, ultimus magnus, obsolete angulatus; columella declivis, subexcavata; apertura lunato-elliptica; perist. simplex, expansum. — R. a. = 4 : 2. — Diam. maj. 32, min. 27, alt. 18 mill. (Coll. Nr. 409.)

Helix Valenciennesii Eyd. in Guérin mag. 1838. t. 115. f. 2. -

— — *Deless.* recueil t. 38. f. 8.

— — *Chemn.* ed. II. Helix N. 304. t. 53. f. 1. 2.

Habitat in insula Capul Philippinarum (Cuming).

✓ 687. **H. flaris Valenciennes.**

T. imperforata, depresso-globosa, tenuis, striis incrementi validis notata, albida, epidermide pallide cornea, decidua instructa; spira parum elevata, obtusa; sutura linearis, albo-marginata; anfr. 4 planiusculi, ultimus obtuse angulatus; columella obliqua, margine granulosa; apertura dilatata, lunaris; perist.

nigrum, subinerassatum, parum expansum. — R. a. = 4 : 7. — Diam. maj. 37, min. 30, alt. 21 mill. (Mus. Cuming.)

Helix filaris Val. Mus. Paris. (teste Cum.)

— — Pfr. in Proc. Zool. Soc. 1845. p. 38.

β. Minor, apice nigricante, sutura rufa: diam. maj. 33, min. 27, alt. 19 mill. (Mus. Cuming.)

Habitat in insula Marinduque Philippinarum (Cuming).

Obs. 1. Intermedia inter *H. Valenciennesii* et virginem, a priore spira elevata et anfractu ultimo obtuse angulato, basi non inflato, ab altera spira majore, columella magis obliqua et perist. incrassato, nigro diversa.

Obs. 2. *H. conformis* Fér. ex icone speciebus praeecedentibus affinis videtur, tamen ex descriptione alio loco inserenda. (Conf. Nr. 777.)

688. *H. Sirena* Beck.

T. imperforata, globoso-depressa, diaphana, spiraliter minutissime et confertissime striata, pallide viridis aut straminea, fasciis rufis et saturate viridibus ornata; spira parum elevata; sutura levis; anfr. 4 convexiusculi, ultimus ad peripheriam interdum subangulatus, albido-cingulatus, antice subito deflexus; columella brevis, arcuata, macula fusca circumdata; apertura lunato-elliptica, intus fasciata; perist. simplex, late expansum, nigricans, marginibus conniventibus. — R. a. = 8 : 15. — Diam. maj. 24, min. 18½, alt. 15½ mill. (Coll. Nr. 410.)

Helix Sirena Beck in sched. Cuming.

— — Pfr. Symb. II. p. 39.

— — Chemn. ed. II. *Helix* N. 309. t. 53. f. 14—17.

β. Major, subcarinata, subtus unicolor, perist. albo: diam. maj. 26, min. 20½, alt. 14½ mill. (Spec.)

Helix Sirena Phil. Icon. I. 4. p. 78. *Helix* t. 4. f. 6.

γ. Unicolor straminea, fascia pallidiore supra carinam obtusam: dimens. sicut var. β. (Spec.)

Habitat in insula Panay Philippinarum (Cuming.)

Obs. Huic similes sunt varietates nonnullae ecarinatae *H. Hügelii* Pfr. (Conf. Nr. 785.)

* * *

689. *H. Petitiana* Orbigny. †

T. imperforata, subdepressa, ovata, crassa, exilissime transversaliter et longitudinaliter striata; spira brevis, obtusissima; anfr. 4; apertura lata; labrum margine incrassatum, reflexum; columella complanata. — Diam. 67, alt. 27 mill. (O.) — Diam. maj. 67, min. 48, alt. 34 mill. (ex ic.)

Helix Petitiana Orb. moll. cub. I. p. 144. t. 9. f. 1—3.

Habitat in insula Cuba: Jagua.

Obs. « Similis *H. auricomae* Fér., magnitudine et peristomate reflexo distinguenda. »

690. *H. sobrina* Férussac.

T. imperforata, globoso-depressa, solida, oblique striata, pallide lutea; anfr. 5 convexiusculi, ultimus ad peripheriam obtuse angulatus; apertura perobliqua, lunato-rotundata, intus alba; perist. incrassatum, reflexiusculum, marginibus callo junctis, dextro breviter arcuato, columellari dilatato, irregulariter et obsolete denticulato. — Diam. maj. 54, min. 43, alt. 30 mill. (Mus. Cuming. et Gruner.)

Helix sobrina (Helicogena) Fér. pr. 84. Hist. t. 43. f. 6.

— — Pfr. Symb. III. p. 74.

— — Chemn. ed. II. Helix N. 298. t. 52. f. 4. 2.

β. Minor: diam. maj. 44, min. 37, alt. 24 mill. (Mus. Cuming.)

Habitat in insula Cuba (Petit).

691. *H. crassilabris* Pfr.

T. imperforata, depressa, crassa, ponderosa, irregulariter striata et undique granulata, albida, lineis spiralibus, undulatis, fuscis, fasciaque unica castanea ad peripheriam ornata; spira vix elevata, distincte granulata, apice nuda, alba; anfr. 4½ planiusculi, sensim accrescentes, ultimus minutissime granulatus, medio subcarinatus, antice vix descendens; apertura obliqua, semielliptica, intus alba; perist. undique incrassato-reflexum, margine dextro subsinuoso, columellari intus obsolete plicato. — Diam. maj. 42, min. 35, alt. 22 mill. (Mus. Cuming.)

Helix crassilabris Pfr. in Proc. Zool. Soc. 1846. p. 144.

— — Phil. Icon. III. 17. Helix t. 10. f. 1.

— — Chemn. ed. II. Helix N. 299. t. 52. f. 3. 4.

Habitat in insula Cuba (Lindon).

692. *H. Cumingi* Pfr.

T. imperforata, depressa, obtuse angulata, apice obtuso violacea, oblique striata, nigricanti-rufa, epidermide rufa, superne maculis irregularibus, basi fasciis multis stramineo-cinereis ornata; anfr. 4, supremi planiusculi, ultimus subinflatus; columella recte descendens, late callosa; apertura lata, subquadrangularis; perist. late expansum, margine inferiore incrassato. — R. a. = 1 : 2. — Diam. maj. 38, min. 32, alt. 24 mill. (Coll. Nr. 444.)

Helix Cumingi Pfr. in Proc. Zool. Soc. 1842. p. 88.

β. Varietas?

Helix lima var. *notabilis* Fér. t. 46 A. f. 4. 5.

Otala asperula Beck ind. p. 36.

Habitat in insula Portorico, var. β Curaçao. (Beck.)

697. **H. incerta** Férussac.

T. imperforata, depresso-globosa, granulato-punctata, cinereo-albida, strigis obliquis et lineis concentricis plurimis fuscis, cinguloque 4 latiore nigricante ornata; anfr. 4 convexi, celeriter accrescentes, ultimus antice deflexus; apertura lunato-rotundata, intus nitide alba; perist. incrassatum, album, margine columellari introrsum acute dilatato. — Diam. maj. 22, min. 18, alt. 15 mill. (Coll. Nr. 445.)

Helix incerta (Helicostyla) Fér. hist. t. 105. f. 2.

— — Pfr. Symb. I. p. 37.

— — Chemn. ed. II. Helix N. 425. t. 71. f. 3. 4.

— *striolata* Guild. in Mus. Britt. 1

— *alutacea* Ziegl. Mus.

— *velutinoides* Ant. Verz. p. 36. (juv.)

Otala incerta Beck ind. p. 36.

Thelidomus striolata Swains. Malae. p. 330.

Habitat in insula St. Thomas.

Obs. Variat anfractu ultimo carinato.

698. **H. sarcostoma** Webb et Berthelot.

T. imperforata, subglobosa, solidula, obsolete striata et granulato-punctulata, fusca, castaneo fasciata et pallide marmorata; anfr. 5 vix convexiusculi, ultimus antice deflexus; apertura perobliqua, lunato-ovalis; perist. amplum, reflexum, subrevolutum, nitidum, carneum, marginibus approximatis, callo crassiusculo

junetis, basali saepe subdentato. — Diam. maj. 28, min. 22, alt. 18 mill. (Coll. Nr. 446.)

Helix sarcostoma Webb et Berth. syn. p. 342.

— — Orb. canar. p. 54. t. 1. f. 13. 14.

— — Chemn. ed. II. Helix N. 444. t. 70. f. 5. 6.

Habitat in saxosis insularum Canariensium Fuerteventurae et Lancerottae.

699. *H. Sauleyi* Orbigny.

T. imperforata, globoso-depressa, oblique rugulosa, undique minute malleata, albida, fusco-maculata, fasciis 5 angustis castaneis ornata; anfr. 5 convexiusculi, ultimus antice subito deflexus; apertura perobliqua, coarctata, lunato-ovalis; perist. album vel roseum, marginibus subparallelis, dextro late expanso, reflexiusculo, columellari dilatato, introrsum late tubereulato. — Diam. maj. 26, min. 21, alt. 17 mill. (Coll. Nr. 447.)

Helix Sauleyi Orb. canar. p. 56. t. 3. f. 9—11.

— — Chemn. ed. II. Helix N. 445. t. 70. f. 7. 8.

Habitat in Canaria majore, Fuerteventura.

700. *H. paradoxa* Pfr.

T. imperforata, globoso-depressa, nitida, concentricè subtilissime et confertissime striata, virescenti-flava, apice nigro-violacea, area basali saturate castanea; anfr. 5 planiusculi, ultimus irregularis, lateraliter subcompressus, prope aperturam tumidus; apertura lunato-elliptica; perist. album, acutum, late reflexum, margine supero intus callo castaneo munito, basali in tuberculum horizontale incrassato. — Diam. maj. 25, min. 20, alt. 44 mill. (Mus. Cuming.)

Helix paradoxa Pfr. in Proc. Zool. Soc. 1845. p. 39.

— — Phil. Icon. I. 7. p. 153. Helix t. 4. f. 7.

β. Albida, peristomate et apertura intus flavis. (Coll. Nr. 448.)

Helix paradoxa Chemn. ed. II. Helix N. 420. t. 71. f. 1. 2.

Habitat in provincia Albaiensi insulae Luzon (Cuming).

Obs. Aliquantulum affinis *H. Thersitae*. (Conf. N. 784.)

701. *H. constricta* Pfr.

T. imperforata, semiglobosa, nitida, concentricè minutissime striata, flavo-albida, fasciis 2 fuscis, interruptis ad peripheriam ornata; anfr. 4½ convexiusculi, ultimus basi subplanatus, antice subito descendens, constrictus; apertura intus nitide flava, lunaris; perist. acutum, album, late reflexum, margine basali subin-

crassato; area columellaris callosa, subexcavata. — Diam. maj. 23, min. 19, alt. 13 mill. (Coll. Nr. 449.)

Helix constricta Pfr. in Proc. Zool. Soc. 1845. p. 39.

— — Chemn. ed. II. Helix N. 413. t. 69. f. 21. 22.

Habitat in insula Mindoro Philippinarum (Cuming).

702. *H. alauda* Férussac.

T. imperforata, depresso-globosa, solidiuscula, nitida, albido-grisea, fulvo-coerulescente zonata et marmorata; anfr. 5 convexi, ultimus antice subito deflexus, basi circa columellam excavatus; apertura lunato-subcircularis, intus livido-fulva; perist. simplex (plerumque roscum), margine supero expanso, columellari dilatato, oblique interdum dentato. — Diam. maj. 22, min. 18, alt. 13 mill. (Coll. Nr. 420.)

Helix alauda (Helicostyla) Fér. pr. 349. Hist. t. 103. f. 2. 3.

— — Lam. 55. p. 80. ed. Dh. p. 54.

— — Wood suppl. t. 7. f. 56.

— — Orb. moll. eub. I. p. 149. t. 9. f. 8—10.

— — Chemn. ed. II. Helix N. 421. t. 71. f. 12.

— *purpuragula* Lea obs. I. p. 163. t. 19. f. 60.

Helicostyla alauda et *purpuragula* Beck ind. p. 36.

β. Alba, fasciis 2 latis castaneis ornata:

Helix alauda var. Chemn. I. c. t. 71. f. 11.

γ. Albida, cingulis 2 nigro-castaneis ornata, cingulo superiore lato, castaneo-reticulato, perist. roseo vel albo.

Helix alauda var. Fér. hist. t. 104. f. 4. 5.

— — var. *bizonalis* Grat. Bord. XI. p. 412. t. 4. f. 7.

— — var. Chemn. I. c. t. 74. f. 9. 10.

Helicostyla pudibunda Beck ind. p. 36. (Male citatur Fér. t. 104. f. 1.)

δ. Minor: diam. maj. 18, min. 15½, alt. 10 mill.

Helix alauda var. min. Chemn. I. c. t. 74. f. 7. 8.

Habitat in insula Cuba, prope San Yago de Cuba.

703. *H. Adansoni* Webb et Berthelot.

T. imperforata, depresso-globosa, solida, virenti-fulva, minutissime granulata; anfr. 5 convexiusculi, ultimus convexus, angulatus, antice inflatus, ad aperturam deflexus, constrictus; apertura subtriangulato-lunaris, intus lactea; perist. incrassatum, margine supero breviter reflexo, infero recto, late appresso, ad columellam subtuberculato. — Diam. maj. 25½, min. 21, alt. 16 mill. (Coll. Nr. 421.)

Helix Adansoni Webb et Berth. syn. p. 313.

— — Chemn. ed. II. Helix N. 416. t. 70. f. 11. 12.

- Helix Pouchet* Adans. Seneg. p. 10. t. 1. f. 2.
 — — (Helicogena) Fér. pr. 73. Hist. t. 42. p. 3.
 — — Lam. ed. Dh. 138. p. 92.
 — — Orb. canar. p. 56.

Otala pouchet Beck ind. p. 36.

Habitat in provincia Senegalensi Africae.

704. **H. consobrina Férussac.**

T. imperforata, globoso-depressa, reticulato-malleata, fusco et flavido marmorata et obsolete fasciata; anfr. $4\frac{1}{2}$ convexiusculi, ultimus magnus, ad aperturam constrictus; apertura subhorizontalis, transverse auriformis, intus nitida, coerulescens; perist. late expansum, reflexum, roscum, marginibus subparallelis, basali dilatato, late tuberculato. — Diam. maj. 23, min. 19, alt. 13 mill. (Coll. Nr. 422.)

Helix consobrina (Helicogena) Fér. pr. 72. Hist. t. 42. f. 2.

— — Webb et Berth. syn. p. 344.

— — Orb. canar. p. 54.

— *Pouchet* var. Lam. ed. Dh. p. 93.

Otala consobrina Beck ind. p. 36.

Habitat in insulis Canariis, Teneriffa (prope Sta. Cruz: Webb).

705. **H. modesta Férussac.**

T. imperforata, depresso-globosa, tenuis, minute reticulato-malleata, unicolor virenti-lutea; spira subelevata; anfr. $4\frac{1}{2}$ vix convexiusculi, ultimus antice subito deflexus, basi subgibbus; apertura perobliqua, lunato-ovalis, intus alba; perist. late expansum, reflexiusculum, album vel roseum, marginibus subconniventibus, basali strictiusculo, dilatato, planato. — Diam. maj. 18, min. 15, alt. 14 mill. (Coll. Nr. 423.)

Helix modesta (Helicogena) Fér. pr. 74. Hist. t. 42. f. 4.

— — Pfr. Symb. III. p. 72.

— — Chemn. ed. II. Helix N. 449. t. 70. f. 4. 2.

Otala modesta Beck ind. p. 36.

Habitat in insulis Canariis.

706. **H. Gaudryi Orbigny.**

T. imperforata, depresso-globosa, striata, obsolete malleata, superne fusco-violacea, maculis violaceis in zonas 4 dispositis vel maculis albidis ornata; spira brevis, obtusa; anfr. $4\frac{1}{2}$ convexiusculi, ultimus antice subito deflexus; apertura perobliqua, lunato-oblonga; perist. subincrassatum, album, marginibus subparallelis,

supero expanso, basali strictiusculo, dilatato, appresso. — Diam. maj. 20, min. 17, alt. $14\frac{1}{2}$ mill. (Coll. Nr. 424.)

Helix Gaudryi Orb. canar. p. 57. t. 3. f. 15 — 17. *)

— — Chemn. ed. II. Helix N. 417. t. 71. f. 15. 16.

Habitat in insulis Canariis, Gomera.

707. *H. advena* Webb et Berthelot.

T. imperforata, depresso-globosa, tenuis, ereberrime undulato-striata, pallide cornea, fascia lata fusca, saepe albo-maculata supra peripheriam, 2 angustioribus obsoletis subtilus notata; anfr. 4 convexiusculi, ultimus antice sensim descendens; apertura lunato-subcircularis; perist. simplex, margine supero subexpanso, columellari dilatato-appresso. — Diam. maj. 17, min. $14\frac{1}{2}$, alt. $11\frac{1}{2}$ mill. (Coll. Nr. 425.)

Helix advena Webb et Berth. syn. p. 324.

— — Orb. canar. p. 58. t. 4. f. 18 — 20.

— — Chemn. ed. II. Helix N. 418. t. 70. f. 13. 14.

Pomatia advena Beck ind. p. 44.

Habitat in insulis Canariis, Azoris, St. Vincent.

708. *H. amocna* Pfr.

T. imperforata, globoso-depressa, lincis longitudinalibus et spiralibus sub lente decussata, albida, fascia unica spadicea supra peripheriam, lineaque suturali rufa ornata; anfr. 4 vix convexiusculi, ultimus obsolete angulatus, antice deflexus, basi parum convexus; apertura transverse lunato-oblonga, intus concolor; perist. simplex, marginibus subparallelis, dextro expanso, basali antice reflexo, ad columellam dilatato, appresse reflexo. — Diam. maj. 18, min. 15, alt. $10\frac{1}{2}$ mill. (Coll. Nr. 426.)

Helix amoena Pfr. in Proc. Zool. Soc. 1845. p. 65.

— — Chemn. ed. II. Helix N. 412. t. 69. f. 19. 20.

Habitat in insula Luzon (Cuming).

Obs. Affinis varietatibus ecarinatis H. Hügli.

709. *H. crubescens* Lowe.

T. imperforata, depresso-globosa, ruguloso-striata et mal-leata, roseo-fulva, saepe fasciis interruptis ornata; spira vix elevata, obtusa; anfr. $4\frac{1}{2}$ convexiusculi, ultimus magnus, antice vix descendens; apertura lunato-subcircularis; perist. acutum, car-neum, intus sublabiatum, margine supero expansiusculo, colu-

*) T. orbiculato-convexa, imperforata, crassa, laevigata, supra fusco violacea, maculis violaceis in zonas 4 dispositis vel maculis albidis ornata; spira obtusa; anfr. 5 subdepressis; apertura ovali; perist. crasso, albo, subreflexo. — Diam. 17, alt. 8 mill. (W. et B. l. c.)

mellari subplanulato. — Diam. maj. 13, min. 11, alt. 9 mill. (Coll. Nr. 427. Spec. Loweana.)

Helix erubescens Lowe Faun. Mader. p. 40. t. 5. f. 3.

— — Chemn. ed. II. Helix N. 422. t. 71. f. 5. 6.

Habitat in insulae Maderae sylvis.

§. 54.

710. *H. Codringtoni* Gray.

T. imperforata, subdepressa, solida, striata, fusco-corneo et albido irregulariter strigata et marmorata; spira depresso-conoidea; anfr. 5 convexiusculi, ultimus linea obsoleta alba cingulatus; apertura perobliqua, semiovalis, intus nitidissima; perist. acutum, intus albo-labiatum, margine columellari breviter arcuato, basali late dilatato, prope columellam incrassato. — Diam. maj. 45, min. 38, alt. 25 mill. (Coll. Nr. 428.)

Helix Codringtoni Gray in Proc. Zool. Soc. 1834. p. 67.

— — Müll. synops. p. 8.

— — Chemn. ed. II. Helix N. 27. p. 53. t. 7. f. 1. 2.

— *Ferussaci* Crist. et Jan Mant. p. 1. (Neo Lcsc.)

— *spiriplanata* Desh. Expéd. de Morée p. 163.

— — Lam. ed. Dh. 143. p. 95.

— — Rossm. VI. p. 39. f. 369 a.

— *vermiculata* var. Cantr. Malac. p. 106.

Helicogena Codringtonii Beck ind. p. 37.

β. Major, depressior, pallide carnea, fasciis obsoletis fuscis ornata: diam. maj. 49, min. 39, alt. 25 mill. (Spec.)

γ. Flavescens, fusco-variegata et fasciis 4 nigricantibus interruptis vel maculosis ornata, plerumque minor:

Helix spiriplana var. Rossm. VI. f. 369 b.

— — Audouin p. 162. Descr. de l'Eg. t. 2. f. 4.

δ. Minor, fasciis 4 fuscis interruptis:

Helix spiriplana Fér. hist. t. 38. f. 3.

Habitat in Graecia (prope Navarin), Morea et in insulis graecis.

Obs. II. *spiriplanata* var. Fér. t. 38. f. 4 — 6 neque ad nostram speciem, neque ad veram *H. spiriplanam* Oliv. (cf. Nr. 954.) pertinere, sed forma globosa et praecipue peristomate late expanso et reflexo distincta esse videtur.

711. *H. Ehrenbergi* Roth. †

T. imperforata, globoso-depressa, transverse dilatata, calcarca, crassa, solida; anfr. 4½, ultimus ventricosus; apertura angulosa, latior quam alta; perist. rectum, superstructum, margine columellari stricto, calloso, gibbo, albo; faux fusca. — Diam. 48, alt. 43 lin. (R.)

Helix Ehrenbergii Roth diss. p. 12. t. 1. f. 15.

Helix irregularis var. *Fér.* t. 28 B. f. 8. 9?

Descript. de l'Egypte Moll. t. 2. f. 8 juv.?

Habitat ad lacum Mareotidem, ubi specimen unicum exsiccatum legit Cl. Roth.

712. *H. lactea* Müller.

T. imperforata, globoso-depressa, transverse dilatata, albida vel lutescens, unicolor vel rufo-fasciata, lacteo-atomata; anfr. $4\frac{1}{2}$ — 5, summi planulati, ultimus convexus, antice deflexus; apertura perobliqua, late lunaris; perist. incrassatum, obtusum, sublabiatum, reflexum, margine columellari stricto, calloso, gibbo; faux et peristoma castanea. — Diam. maj. 39, min. 29, alt. 23 mill. (Coll. Nr. 429. Spec. maj.) — Diam. maj. 29, min. 23, alt. 47 mill. (Spec. min.)

Helix lactea Müll. verm. II. p. 19. N. 249.

— — (Helicogena) *Fér.* pr. 78. Hist. t. 39 A. f. 7. 8. (c. anim.)
t. 45. f. 4 — 40.

— — *Lam.* 36. p. 75. ed. Dh. p. 43.

— — *Mich.* compl. p. 19. t. 44. f. 5. 6.

— — *Wagner* Reise, Atlas t. 42. f. 9 — 44.

— — *Morelet* moll. du Port. p. 68.

— *faux nigra* Chemn. IX. P. 2. p. 427. t. 430. f. 4464.

Otala atomaria Schumach. p. 491.

Helicogena lactea Beck ind. p. 37.

Lister t. 51. f. 49. t. 95. f. 96.

β. Spira elatiore:

Helix hispanica Mich., *Terv.* p. 46. t. 4. f. 7. 8.

γ. Peristomate pallido: diam. 40 — 42 lin. (Müll.)

Helix punctata Müll. verm. II. p. 24. N. 220.

— *punctatissima* Jeniss. in collect.

Habitat in Gallia meridionali, Hispania, Lusitania, Italia et Africa boreali, nec non in Teneriffa (Webb et Berth.), Montevideo (Orb. syn. p. 2.).

713. *H. irrorata* Say. †

T. imperforata, depresso-subglobosa, pallide rufa, punctis numerosissimis albis et 4 fasciis obscurioribus obsoletis ornata; anfr. 5 convexi, supremi striati; spira convexa, depressa; apertura intus livescens; perist. simplex, reflexum, margine columellari calloso. — Diam. $4\frac{1}{10}$, alt. $\frac{3}{5}$ poll. (S.)

Helix irrorata Say in Philad. journ. II. p. 370.

Habitat in Pennsylvania.

Obs. «Affinis *H. lacteae*, spira magis elata, callo columellari non angulato, apertura minus ampla.» (S.) — Nihilominus specimen fortuito introductum *H. lacteae* esse videtur; scriptores recentiores americani speciei mentionem non faciunt.

714. **H. hispanica** Partsch. †

T. imperforata, globoso-depressa, fusculo-albida, fusculo-variegata albidoque maculata, castaneo-5-fasciata; anfr. 5 celeriter aerecentes, planulati; apertura perobliqua, late rotundato-lunaris; perist. hepaticum, sublabiatum, margine exteriori reflexiusculo, interiore calloso. — Diam. maj. 30, min. 25, alt. 15 mill. (ex ic. Rossm.)

Helix hispanica Partsch in Mus. Caes. Vindob.

— — Rossm. VII. p. 15. f. 460.

— *speciosa et balearica* Zgl. Mus.

β. Minor, perist. albo: diam. maj. 24, min. 18, alt. 12½ mill.

Helix hispanica var. Rossm. X. p. 11. f. 591.

Habitat in Hispania, var. β in Pyrenaeis.

715. **H. Juilleti** Terver.

T. imperforata, subgloboso-depressa, albida, sordide fusco-5-fasciata, substriata, solida; spira convexa; anfr. 5½ sensim accrescentes, summi plani, ultimus antice valde deflexus; apertura subovato-lunaris, transversalis, perobliqua, fauce et columella castaneis; perist. simplex, intus sublabiatum, obtusum, margine columellari strictiore, calloso, gibbo. — Diam. maj. 34, min. 25, alt. 16 mill. (Coll. Nr. 430.)

Helix Juilleti Terver cat. p. 17. t. 2. f. 3. 4.

— *Wagneri* Rossm. IX. p. 3. f. 554.

— — Rossm. in Wagn. Reise p. 256. Atlas t. 12. f. 12.

Habitat prope Mascara Algeriae (Wagner).

716. **H. vermiculata** Müller.

T. imperforata, globoso-depressa, lutescens, lineolis punctisque incrassatis albis, fasciisque rufis (superis saepissime taeniatis) multimode ludens; anfr. 5 convexiusculi, ultimus antice deflexus; apertura perobliqua, late lunaris; perist. album, sublabiatum, late reflexum, margine columellari strictiusculo, calloso. — Diam. maj. 35, min. 27, alt. 21 mill. (Coll. Nr. 431.)

Helix vermiculata Müll. verm. II. p. 20. N. 249.

— — Chemn. IX. P. 2. p. 120. t. 129. f. 1448.

— — Drap. p. 96. t. 6. f. 7. 8.

— *vermiculata* var. *Cirtae Rossm.* X. p. 12. f. 592.

— — var. *Wagn.* Alg. Atl. t. 12. f. 1.

Habitat in Africa boreali: Bona, Guelma, Constantine, Bugia.

Obs. Differt ab *H. vermiculata* non solum magnitudine et forma globulosa, sed praecipue structura testae homogenea, punctis albis in *H. vermiculata* in ipsa testae substantia incrassatis, nec unquam deficientibus, in *H. constantina* nunquam existentibus. Conf. *Küster* l. c.

718. *H. Dupotetiana* Terver.

T. imperforata, subglobosa, albida, rugulis et lineis spirilibus subopaca, fusco-5-fasciata vel concolor; anfr. 5, supremi planulati, 2 ultimi convexi, ultimus antice subito valde deflexus; apertura perobliqua, late lunaris; perist. fusciculo-albidum, reflexum, acutum, sublabiatum, margine columellari strictiore, gibbo, fauceque castaneis. — Diam. maj. 34, min. 26, alt. 20 mill. (Coll. Nr. 433.)

Helix Dupotetiana Terv. cat. p. 13. t. 1. f. 4—6.

— — *Rossm.* X. p. 2. f. 553.

— — *Wagn.* Alg. Atl. t. 12. f. 7.

β . Minor, alba: diam. maj. 26, min. 24, alt. 14 mill. (Spec.)

Helix zaffarina Terv. p. 12. t. 1. f. 2. 3.

— *Dupotetiana* var. *Rossm.* IX. f. 552.

— — var. *Wagn.* Alg. Atl. t. 12. f. 6.

Helicogena zapharina Beck ind. p. 39.

Habitat in Africa boreali: Oran, Mascara; var. β circa Oran, Tremecen (Terv.), et in insulis Zaffarinis (Berthelot).

719. *H. xanthodon* Anton.

T. imperforata, subglobosa, depressula, alba, solida; spira convexa; anfr. 5 convexiusculi, sensim accrescentes; apertura rotundata, perobliqua, minuscula; perist. reflexum, albo-labiatum, margine columellari calloso, unidentato, fauceque castaneis. — Diam. maj. 22, min. 19, alt. 45 mill.

Helix xanthodon Ant. in litt. ad Rossm.

— — Rossm. IX. p. 6. f. 563.

— — Wagn. Alg. Atl. t. 42. f. 8.

Habitat in Africa boreali, circa Oran.

Obs. Differt ab *H. Dupotetianae* var. *zaffarina* anfractibus lentius accrescentibus et apertura parvula.

720. *H. arabica* Terver.

T. imperforata, globosa, albida, solida, minutissime striata, fasciis fuseis, interruptis, albo-punctatis ornata; anfr. 5 planiusculi, lente accrescentes, ultimus antice inflatus, subito deflexus; apertura angustata, intus castanea; perist. album, labiatum, marginibus subparallelis, dextro expanso, basali dilatato, gibbo, unidentato. — Diam. maj. 27, min. 22, alt. 47 mill. (Coll. Nr. 434.)

Helix arabica Terv. cat. p. 14. t. 2. f. 1. 2.

— — Rossm. in Wagn. Alg. Atl. t. 42. f. 3.

Habitat in monte Atlas: Beni-ou-Assan.

* * *

721. *H. atrolabiata* Krynicki.

T. imperforata, depresso-globosa, solida, rugoso-striata, epidermide sordide flavescens induta, nigro-trifasciata; spira exserta, apice obtusa; anfr. 5½ convexiusculi, ultimus antice valde deflexus; apertura transversim dilatata, lunaris; perist. late expansum, intus atro-brunneus, marginibus callo nigro, introrsum diffuso junctis, basali reflexo, lato, plano, medio subinerassato. — Diam. maj. 40, min. 33, alt. 22 mill. (Coll. Nr. 435.)

Helix atrolabiata Kryn. Bull. Mosc. VI. p. 425. t. 9. IX. p. 457.

— — Eichw. Fauna caspio-caucas. p. 197. t. 38. f. 4. 5.

— *sylvatica* var. *insignis* Fér. in Bull. zool. 1835. p. 24.

β. Fasciis oblitteratis.

γ. Unicolor fulvens, labro et fauce albis. (Mus. Cuming.)

Habitat in Caucaso, circa Kasan.

722. *H. vindobonensis* C. Pfr.

T. imperforata, subglobosa, costulato-striata, luteo-alba vel lutea, 5-fasciata; anfr. 5 convexiusculi, ultimus antice breviter deflexus; apertura late subangulato-lunaris; perist. late expansum,

hepaticum, marginibus approximatis, columellari strictiusculo, albo-labiato, basi replicatim adnato. — Diam. maj. 24, min. 21, alt. 17 mill. (Coll. Nr. 436.)

Helix vindobonensis C. Pfr. III. p. 15. t. 4. f. 6. 7.

— *sylvatica* var. *vindob.* Fér. pr. 54. Hist. t. 32 A. f. 6. 7.

— — var. *Lam.* ed. Dh. p. 56.

— *mutabilis* Hartm. Gast. I. p. 213.

— — var. *montana* Sturm Fauna VI. 6. i. k. l.

— — Rossm. I. p. 60. f. 7. VIII. p. 27. f. 495.

— *arvensis* Kryn. Bull. Mosc. IX. p. 159.

Cepaea vindobonensis Held in Isis 1837. p. 910.

β. Minor, globosa:

Helix sylvatica var. *alpicola* Fér. t. 30. f. 5. t. 32 A. f. 5?

— *austriaca* var. Rossm. VIII. f. 495 c. (Spec. Dresd.)

Habitat in Austria (circa Vindobonam), Styria («im Mürzthal»), provincia littorali (prope Görz!), Carniolia (Schmidt), in Saxonia (Dresdae: Rm.), Silesia (Scholtz), Albania.

Obs. Variat spira magis minusve elata, fasciis nonnullis vel omnibus obsoletis vel confluentibus (in Albania).

723. *H. nemoralis* Linn.

T. imperforata, subglobosa, striata, fasciata vel concolor; anfr. 5 convexiusculi, ultimus antice descendens; apertura late angulato-lunaris; perist. reflexum, labiatum, margine dextro arcuato, columellari illum superante, strictiusculo, dilatato, calloso; faux et perist. fusca vel nigricantia. — Diam. maj. 25, min. 21, alt. 15 mill. (Coll. Nr. 437.)

Helix nemoralis L. syst. ed. X. p. 773. ed. XII. p. 1247.

Helicogena sylvatica Beck ind. p. 38.

Cepaea sylvatica Held in Isis 1837. p. 910.

β. Minor: diam. maj. 18, min. 16, alt. 12½ mill. (Spec.)

γ. *Scalaris*? Fér. t. 32. f. 7.

Habitat in Gallia et Helvetia, var. β in Sabaudia.

Obs. Ab *H. nemorali* et *vindobonensi* jam primo aspectu differt peristomate non reflexo.

725. **H. montana** Studer.

T. imperforata, conico-globosa, leviter striata, nitidula, albida, fasciis 5 interruptis, fuscis ornata; spira conica, obtusiuscula; anfr. 5 convexi, ultimus antice deflexus; apertura rotundato-lunaris; perist. rectum, intus labiatum, marginibus subparallelis, columellari replicatim adnato, callo intus subabrupto, dentem simulante. — Diam. maj. 24, min. 19, alt. 15 mill. (Coll. Nr. 439.)

Helix montana Stud. in Coxé travels.

— — Hartm. in Sturm Fauna VI. 6. 5.

— *lucorum* Razum. hist. nat. du Jorat I. 274.

— *sylvatica* Fér. hist. t. 30. f. 9.

— — Wood suppl. t. 7. f. 5.

Tachea montana Hartm. Gast. I. p. 212. t. 81.

Habitat in Helvetia.

Obs. Differt ab *H. sylvatica* testa magis conica, anfractibus convexioribus, sutura magis impressa et callo dentiformi marginis basalis peristomatis.

726. **H. alabastrites** Michaud.

T. imperforata, depresso-globosa, subtiliter striata, nitida, alba, concolor vel fasciis 5 pallide fuscis ornata; spira convexa,

obtusa; anfr. 5 planulati, lente accrescentes, ultimus compressus, obsolete angulatus, antice subito valde deflexus; apertura fere horizontalis, angusta, lunato-ovalis; perist. intus vix labiatum, marginibus approximatis, callo tenui junctis, dextro arcuato, expanso, columellari strictiusculo, introrsum vix dilatato. — Diam. maj. 24, min. 19½, alt. 14 mill. (Coll. Nr. 440.)

Helix alabastrites et *soluta* Mich. cat. Moll. d'Alger.

— — Terv. cat. p. 18. t. 4. f. 1—3.

— — Rossm. IX. p. 4. f. 557—59.

— — Wagn. Alg. Atl. t. 12. f. 4.

— — Chemn. ed. II. Helix N. 24. p. XV et 47. t. 6. f. 4. 5.

Helicogena alabastrites Beck ind. p. 39.

Habitat in Africa boreali: Algeria, Oran etc.

Obs. Variat spira elatiore: haec 5fasciata est *H. soluta* Mich. — Var. albam in Sicilia lectam esse affirmat Cl. Terver.

727. *H. hieroglyphicula* Michaud.

T. imperforata, depressa, solida, nitida, albido-carnea, fusco-atomata, fasciis 4—5 nigro-fuscis, superioribus plerumque maculose interruptis ornata; spira convexa, obtusa; anfr. 5 plani, summi carinati, ultimus antice valde deflexus; apertura ovato-lunaris, subhorizontalis, intus castanea; perist. obtusatum, marginibus subparallelis, callo lato, nitido, castanco junctis, dextro leviter arcuato, sublabiato, columellari strictiore, calloso, gibbo, dentato fauceque castaneis. — Diam. maj. 24, min. 24, alt. 13 mill. (Coll. Nr. 444.)

Helix hieroglyphicula Mich. cat. moll. d'Alger.

— — Terv. cat. p. 17. t. 4. f. 4—6.

— — Rossm. IX. p. 3. f. 555. 56.

— — Wagn. Alg. Atl. t. 12. f. 5.

Habitat in Africa boreali: Algeria, Oran etc.

728. *H. marmorata* Férussac.

T. imperforata, globoso-depressa, lutescenti-cornea, interrupte 5-fasciata, fusculo albidoque marmorata; anfr. 5 vix convexiusculi, ultimus antice deflexus; apertura late lunaris; perist. simplex, intus roseum, marginibus conniventibus, dextro patulo, columellari appresso, subdilatato, laevigato. — Diam. maj. 20, min. 17, alt. 11 mill. (Coll. Nr. 442.)

Helix marmorata (*Helicogena*) Fér. pr. 65. Hist. t. 40. f. 8.

— — Rossm. IV. p. 10. f. 243.

— — Chemn. ed. II. Helix N. 40. t. 9. f. 1. 2.

Habitat prope Gibraltar.

729. **H. melitensis Férussac.**

T. imperforata, depresso-globosa, glabra, albida, unicolor vel maculis pallide fuscis, subseriatis nubeculata; anfr. 4 planiusculi, ultimus antice deflexus; apertura lunato-elliptica, intus livida; perist. album, reflexum, marginibus conniventibus, dextro arcuato, basali stricto, calloso. — Diam. maj. 19, min. 16, alt. 11 mill. (Coll. Nr. 443.)

Helix melitensis (Helicogena) Fér. pr. 58. Hist. t. 25. f. 11. 12.

— — Wood suppl. t. 7. f. 43.

— — Pfr. Symb. I. p. 38.

— — Cantr. Malac. p. 106. (inclus. *H. soluta* Mich. cat. f. 9. 10. et? Chemn. IX. 1191. 92.)

Habitat in insula Malta.

730. **H. circumornata Férussac. †**

T. imperforata, globoso-depressa, glabra, alba, fascia unica rufa in medio, et 3 seriebus macularum aurantio-fuscarum cingulata; anfr. 4 planulati, ultimus inflatus; apertura lunato-elliptica, intus fuscata; perist. subreflexum. — Diam. maj. 19, min. 15, alt. 11 mill. (ex ic.)

Helix circumornata (Helicogena) Fér. pr. 68. Hist. t. 41. f. 2.

— — Wood suppl. t. 7. f. 44.

— — Voigt in Cuv. Thierr. III. p. 54.

— — Chemn. ed. II. Helix N. 432. t. 72. f. 10. 11.

Helicogena circumornata Beck ind. p. 39.

Habitat . . . ?

Obs. Similis *H. carsoliana* (Nr. 753.), sed omnino imperforata videtur; praeterea differt apertura elliptica, marginibus non approximatis.

731. **H. stenostoma Pfr.**

T. imperforata, globuloso-depressa, solida, sublaevigata, nitida, alba, fascia unica fusca ad peripheriam et macularum aurantiarum seriebus 2 ornata, punctisque griseis obsolete aspersa; anfr. 4½ vix convexiusculi, ultimus ventrosus, antice abrupte deflexus; apertura subhorizontalis, elliptica; perist. labiatum, album, marginibus approximatis, supero breviter expanso, basali arcuato, appresse reflexo. — Diam. maj. 15½, min. 13, alt. 9 mill. (Mus. Cuming.)

Helix stenostoma Pfr. in Proc. Zool. Soc. 1846. p. 28.

Habitat . . . ?

Obs. Duo vidi specimina praeter magnitudinem prorsus aequalia.

732. **H. diaphana** Lamarck.

T. imperforata, subsemiglobosa, tenuis, sublaevigata, nitida, pellucida, corneo-lutescens; spira prominula, obtusa; anfr. 4 vix convexi, ultimus basi excavatus; columella profunde intrans, superne dilatata, albo-callosa; apertura lunato-subovalis; perist. simplex, margine dextro recto, columellari subdentato. — Diam. maj. $13\frac{1}{2}$, min. $11\frac{1}{2}$, alt. $8\frac{1}{2}$ mill. (Spec. Mus. Berol.)

Helix diaphana Lam. 73. p. 85. ed. Dh. p. 62.

— — (Helicostyla) Fér. pr. 319 bis. Hist. t. 104. f. 1.

— — Chemn. ed. II. Helix N. 434. t. 72. f. 15—18.

Otala diaphana Beck ind. p. 36.

Habitat in insula Teneriffa (Maugé, Lam.), Rio Janeiro? (Mus. Berol.)

Obs. Juxta *H. nivosam* Sow. (Nr. 497.) potius collocanda, etsi *H. nemoralinae* Petit peraffinis.

733. **H. nemoralina** Petit..

T. imperforata, depressa, subdiaphana, albido-rosca, tenuissime striata; spira obtusa; anfr. 4 planulati, ultimus fascia fusca, albo-marginata cinctus, antice deflexus; apertura lunato-rotundata; perist. roscum, intus labiatum, margine dextro subpatulo, columellari strictiusculo, dilatato, plano. — Diam. maj. $12\frac{3}{4}$, min. $10\frac{1}{2}$, alt. $7\frac{3}{4}$ mill. (Coll. Nr. 444.)

Helix nemoralina Petit in Guér. mag. 1836. t. 80.

— — Chemn. ed. II. Helix N. 435. t. 72. f. 19—21.

— . . . Fér. hist. t. 29 A. f. 1—3.

Habitat in montibus insulae St. Thomas.

Obs. Hoc loco conferenda *H. erubescens* Lowc. (Nr. 709.)

734. **H. chrysomela** Pfr. ~~sen~~

T. imperforata, depresso-globosa, rugoso-malleata, nitidula, alba; anfr. 5 planiusculi, ultimus subangulatus, basi planiusculus, antice breviter deflexus; apertura perobliqua, truncato-ovalis; perist. simplex, obtusum, intus aurantio-limbatum, marginibus callo aurantio, nitido, introrsum diffuso junctis, basali dilatato, planulato. — Diam. maj. 10, min. 8, alt. 6 mill. (Mus. Cuming.)

Helix chrysomela Pfr. Symb. III. p. 72. *oenostoma* Webb.

Habitat in Brasilia.

735. **H. minoricensis** Mittr. †

T. imperforata, orbiculato-convexa, glabriuscula, albida aut lutescens, superne maculis fuscis interruptis, inferne aliis fasciam fingentibus ornata; anfr. 5 convexiusculi; spira prominula, apice

fusca; labrum margine reflexum; faux pallide rosea; columella subdentata. — Diam. 7 lin. (M.)

Helix minoricensis Mitre in Ann. sc. nat. XVIII. p. 188.

— — Arch. f. Naturg. 1843. II. p. 123.

Habitat in insula Minorca.

* * *

736. *H. platychela* Menke.

T. imperforata, subglobosa, caesio-albida, unicolor vel maculose 4-fasciata, subtiliter striata; spira conoidea; anfr. $5\frac{1}{2}$ convexi, ultimus antice valde deflexus; apertura perobliqua, truncato-rotundata; perist. late expanso-reflexum, albo-sublabiatum, margine columellari calloso, gibbo. — Diam. maj. 24, min. 24, alt. 17 mill. (Coll. Nr. 445.)

Helix platychela Mke syn. ed. 2. p. 125.

— — Rossm. VII. p. 7. f. 443—445. X. p. 12. f. 593.

— *praetexta* Jan. Phil. Sicil. I. p. 129. t. 8. f. 12.

— *sicana* var. Phil. Sicil. II. p. 104.

Helicogena platychela a Beck ind. p. 39.

β? Major, fossilis:

Helix sphaeroidea Phil. Sicil. I. p. 135. t. 8. f. 19.

Habitat in Sicilia; var. β secundum Arad. et Magg. (cat. p. 67.) in littore Catanensi viva reperta est.

Obs. Variat forma magis conoidea vel depressa, nec non peristomate latiore et angustiore, forsitan in sequentem abiens?

737. *H. sicana* Férussac.

T. imperforata, conoideo-globosa, alba, rarius fusco-fasciata, substriata; anfr. $5\frac{1}{2}$ planiusculi, ultimus antice deflexus; apertura parva, perobliqua, irregulariter rotundato-lunata; perist. breviter reflexum, sub-albo-labiatum, marginibus approximatis, columellari gibbo. — Diam. maj. 24, min. 19, alt. 18 mill. (Coll. Nr. 446.)

Helix sicana Fér. hist. t. 28 B. f. 7.

— — Lam. ed. Dh. 215. p. 130.

— — Rossm. VII. p. 9. f. 446. 47. X. p. 12. f. 594. 96.

— *soluta* (Zgl.) Phil. Sicil. I. p. 129. t. 8. f. 15.

Habitat frequens in Sicilia.

§. 55.

738. *H. candidissima* Draparnaud.

T. subimperforata, globosa, solida, cretacea; anfr. 5 planiusculi, superi carinati (carina demum evanescente), ultimus antice

deflexus; apertura parva, lunata, subangulata; perist. subpatulum, hebes, intus subincrassatum, margine columellari strictiusculo, dilatato. — Diam. maj. 20, min. $17\frac{1}{2}$, alt. 13—14 mill. (Coll. Nr. 447.)

Helix candidissima Drap. p. 89. t. 5. f. 19.

— — Lam. 57. p. 84. ed. Dh. p. 52.

— — Chemn. ed. II. Helix N. 34. t. 7. f. 5. 6.

Leucochroa candidissima Beck ind. p. 17.

β. Minor: diam. maj. 16, min. $14\frac{1}{2}$, alt. 12 mill. (Spec.)

γ. Maxima: diam. maj. 25, min. $17\frac{1}{2}$, alt. 20 mill. (Spec.)

Rossm. IX. p. 5. f. 560.

Terv. cat. p. 10. t. 4. f. 9.

δ. Subcarinata: diam. maj. 20, min. 18, alt. 13 mill. (Spec.)

Helix rimosa Jan, Rossm. VI. f. 367 b.

— *candidissima* var. Fér. hist. t. 27. f. 11—13.

— *depressa* Mühlf.

ε. Minor: sutura undulata:

Helix candidissima var. Fér. hist. t. 27 A. f. 7.

Habitat in littoribus mediterraneis Galliae, Italiae, Siciliae, in insulis Mariannis (Fér. in Voy. de Freyc. Zool. p. 468.); var. γ circa Oran Algeriae, δ in Sardinia.

Obs. Conf. H. cariosa Mich. (Nr. 564.)

* * *

739. *H. Raspailii* Payraudcau.

T. obtecte perforata, orbiculato-depressa, fusco-lutea, rufo-trizona, striata, solidiuscula; anfr. $4\frac{1}{2}$ planulati, ultimus antice subdeflexus; apertura perobliqua, lunato-ovalis; perist. sordide labiatum, margine supero expanso, basali reflexo, columellari valde dilatato. — Diam. maj. 34, min. 28, alt. 17—18 mill. (Coll. Nr. 448.)

Helix Raspailii Payr. catal. p. 102. t. 5. f. 7. 8.

— — Lam. ed. Dh. 140. p. 93.

— — Rossm. VIII. p. 30. f. 505.

— — Chemn. ed. II. Helix N. 438. t. 73. f. 1—3.

Campylaea Raspailii Beck ind. p. 26.

Habitat in insula Corsica.

Obs. Species H. planospirae, Sadlerianae etc. affinis, ob umbilicum plane consolidatum hic collocanda.

740. *H. tudiculata* Binney. †

T. imperforata, orbiculato-convexa, rufo-olivacea, fascia unica castanea cineta et impressionibus squamatis undique signata;

apertura transversa; labrum albidum, subreflexum; basis convexa. — Diam. $4\frac{1}{4}$ poll. (B.)

Helix tudiculata Binn. in Bost. journ. IV. p. 360. t. 20.

Habitat in California.

Obs. «Anfr. 5 — 6 convexiusculi; apertura suborbicularis; umbilicus callo testaceo tectus». — An *H. californiensis* Lea var.? (Conf. Nr. 890.)

741. *H. alonensis* Férussac.

T. obtecte perforata, depresso-globosa, solidiuscula, albida, varie fusco-fasciata vel marmorata, striis irregularibus lineisque spiralibus subtiliter decussata; anfr. $4\frac{1}{2}$ convexiusculi, ultimus magnus, tumidus, antice breviter deflexus; apertura ampla, rotundato-lunaris; perist. simplex, intus albo-sublabiatum, marginibus subconniventibus, supero et basali vix expansis, columellari late reflexo, appresso, perforationem tegente. — R. a. = 5 : 8. — Diam. maj. 27, min. 22, alt. 16 mill. (Coll. Nr. 449.)

— — *Rossm.* VIII. p. 28. f. 497. 98.

— — *Chemn.* ed. II. *Helix* N. 439. t. 73. f. 6. 7.

Habitat in Hispania: Alicante, Valencia, Almeria.

Obs. Conf. *H. campesina* Ezq. (Nr. 947.)

742. *H. guttata* Olivier.

T. obtecte perforata, depressa, superne planiuscula, basi convexior, tenuis, costulato-striata, grisea, interrupte fusco-fasciata; anfr. $4\frac{1}{2}$ planulati, ultimus antice vix deflexus; apertura rotundato-lunaris; perist. expansum, intus sublabiatum, marginibus conniventibus, columellari dilatato, regionem umbilicalem prorsus tegente. — Diam. maj. 24, min. 18, alt. 11 mill. (Coll. Nr. 450.) — Diam. maj. 33, min. 26, alt. 19 mill. (ex ic. Fér.)

Helix guttata Oliv. voy. II. p. 334. t. 31. f. 8.

— — *Lam.* 38. p. 76. ed. Dh. p. 44.

— — (Helicogena) Fér. hist. t. 38. f. 2.

Habitat in Syria, Egypto.

743. *H. niciensis* Férussac.

T. obtecte perforata, globoso-depressa, striata, albida, maculose 5-fasciata; anfr. 5 planiusculi, ultimus antice deflexus; apertura transverse lunato-ovalis, intus lilacina; perist. intus lilacino-labiatum, margine supero patulo, basali appresse dilatato. — Diam. maj. 23, min. 19, alt. 12 mill. (Coll. Nr. 451.)

Helix niciensis (Helicogena) Fér. pr. 66. Hist. t. 39 A. f. 1. (anim.) t. 40. f. 9.

β. Unicolor: Rossm. X. f. 604.

γ. Minor: Rossm. X. f. 602.

Habitat in Gallia meridionali et prope Nizza.

744. *H. ovum reguli* Lea.

T. obtecte perforata, depressa, laevigata, albida, punctis corneis aspersa et fulvo-fasciata; spira parum elevata; anfr. 5 vix convexiusculi, ultimus antice subito deflexus, basi subplanulatus; apertura subhorizontalis, intus nitida, rubro-fuscescens vel livida, transverse lunato-oblonga; perist. albo-labiatum, undique expansum, marginibus subparallelis, callo perforationem claudente junctis, basali dilatato, subexcavato. — Diam. maj. 24, min. 16, alt. 10 mill. (Mus. Cuming.)

Helix ovum reguli Lea obs. I. p. 164. t. 19. f. 64.

— — — *Phil.* Icon. III. 17. *Helix* t. 40. f. 6.

Habitat in insula Cuba (Lindon); nec in Java (Lea).

745. *H. splendida* Draparnaud.

T. obtecte perforata, globoso-depressa, albida, laeviuscula, fasciis 5 fuscis, saepe evanescentibus vel superne confluentibus ornata; anfr. 4 — 4½ convexiusculi, celeriter accrescentes, ultimus antice subdeflexus; apertura late ovalis; perist. rectum, albo-labiatum, margine columellari dilatato foramen angustissimum obtegente. — Diam. maj. 20, min. 16, alt. 12 mill. (Coll. Nr. 452.)

β. Peristomate rosco-labiato:

Helix splendida var. *Fér.* t. 40. f. 1. 6.

— — var. *Rossm.* X. p. 13. f. 609.

γ. Minor, tenuis, rosca, pellucida, fasciis 5 subinterruptis.

Habitat in Gallia meridionali et Hispania, var. γ in Pyrenaeis.

746. *H. phacogramma* Pfr.

T. obtecte perforata, orbiculato-convexa, glabriuscula, nitida, lineis laetis castaneis superne radiata, basi castaneo-unifasciata;

anfr. $4\frac{1}{2}$ vix convexiusculi, ultimus obsolete angulatus, basi planiusculus; apertura perobliqua, rotundato-lunaris; perist. intus castaneo-labiatum, marginibus conniventibus, supero parum expanso, basali dilatato, reflexo, appresso. — Diam. maj. 45, min. $42\frac{1}{2}$, alt. $8\frac{1}{2}$ mill. (Mus. Cuming.)

Helix phaeogramma Pfr. Symb. III. p. 72.

Habitat . . . ?

747. *H. serpentina* Férussac.

T. obtecte perforata, globoso-depressa, glabriuscula, alba, scriatim fusco-maculata et signata; anfr. $4\frac{1}{2}$ convexiusculi, ultimus antice descendens; macula umbilicalis brunnea; apertura late lunaris; perist. patulum, albo-labiatum. — Diam. maj. 47, min. 45, alt. 9 mill. (Coll. Nr. 453.)

— *muralis* var. Cantr. Malac. p. 409.

Helicogena carseolana Beck ind. p. 39.

Habitat in Italia, Sicilia.

754. *H. Reinga* Gray.

T. obtecte perforata, globoso-depressa, solidula, oblique striatula, albida, fascia unica castaneâ pluribusque lineis aurantiis ornata; spira subelevata; anfr. $5\frac{1}{2}$ convexiuseculi, sensim accrescentes, ultimus subtus convexus, antee descendens; apertura perobliqua, angusta, subtriangulato-lunaris; perist. breviter expansum, intus albo-labiatum, margine columellari strictiusculo, obsolete et obtuse unidentato. — Diam. maj. 45, min. 43, alt. 40 mill. (Coll. Nr. 459.)

Helix Reinga Gray in sched. (New Zeal. t. 4. f. 44. 42. ined.)

— — Pfr. Symb. III. p. 73.

— — Chemn. ed. II. Helix N. 443. t. 73. f. 8. 9.

Habitat in Nova Seelandia.

755. *H. Dringi* Pfr.

T. obtecte perforata, depressa, tenuis, fragilis, superne confertim plicatula, albida, opaca, lineis pellucidis cingulata; spira subplanulata; anfr. $4\frac{1}{2}$ vix convexiuseculi, ultimus latere subcompressus, basi laevigatus, inflatus; apertura lunaris, concolor; perist. expansum, intus subinerassatum, margine columellari breviter arcuato, dilatato, reflexo, appresso. — Diam. maj. 43, min. 41, alt. $7\frac{1}{2}$ mill. (Mus. Cuming.)

Helix Dringi Pfr. Symb. III. p. 73.

Habitat in Australia orientali, prope «Torres-Strait» (Dring).

756. *H. calva* Lowe.

T. obtecte perforata, globoso-depressa, tenuiusecula, superne costulato-striata, basi laevigata, diaphana, corneo-albida, obsolete et anguste fusco-bifasciata; spira subsemiglobosa; anfr. 7 vix convexiuseculi, ultimus antee vix descendens; apertura lunaris; perist. tenue, subexpansum, intus albo-labiatum, margine basali plane

arcuato. — Diam. maj. $8\frac{1}{2}$, min. 8, alt. 5 mill. (Coll. Nr. 460. Spec. Lowcan.)

Helix calva Lowe Faun. Mader. p. 49. t. 5. f. 26.

Habitat in Maderae sylvis.

* * *

757. *H. albolabris* Say.

T. obtecte perforata, depresso-globosa, costulis obliquis striisque spiralibus obsoletis, confertissimis subdecussata, flava; spira parum elata; anfr. $5\frac{1}{2}$ convexiusculi; apertura rotundato-lunaris; perist. angulatim late reflexum, intus album, nitidum, callosum, ad columellam brevem, arcuatam dilatatum. — R. a. = 3 : 5. — Diam. maj. 36, min. 26, alt. 17—18 mill. (Coll. Nr. 461.)

Nec Burr.

β. Omnino eadem, accedente linea rufa supra fasciam viridem, alteraque ad suturam: Phil. Icon. I. c. f. 3.

γ. Minor, vix carinata, fascia alba ad peripheriam et linea rufa hanc non attingente, alteraque suturali ornata, basi unicolor: Phil. l. c. f. 5 sup.

δ. Minima, vix angulata, ad peripheriam non albo-fasciata, lincis 3 rufis ornata: diam. maj. $16\frac{1}{2}$, min. 14, alt. 9 mill. Phil. l. c. f. 5 inf.

Habitat in insula Luzon (Cuming). In Museo Vindobonensi jamdudum allata a Cl. de Hügel.

Obs. Species pervariabilis, ad *H. fibulam* et *Hanleyi*, nec non ad *H. amoenam* (Nr. 708.) prope accedens, ab omnibus tamen in omnibus varietatibus constanter distincta.

786. *H. Hanleyi* Pfr.

T. imperforata, depressa, lenticularis, acute carinata, tenuis, diaphana, subtilissime decussata, nitida, sulphurea, ad suturam et carinam albo-fasciata; spira parum elevata; anfr. 4 subplanulati, ultimus antice angulatim deflexus, constrictus; apertura parvula, horizontalis, elliptica; perist. simplex, undique expansum et reflexum, marginibus fere contiguis, basali strictiusculo. — Diam. maj. 49, min. 15, alt. 9 mill. (Coll. Nr. 479.)

Helix Hanleyi Pfr. in Proc. Zool. Soc. 1845. p. 65.

— — Chemn. ed. II. *Helix* N. 440. t. 69. f. 15—18.

β. Superne nigricanti-purpurea, ad suturam et carinam albido-fasciata, basi lutescenti-albida, infra carinam rufo-unifasciata.

Habitat in insula Luzon (Cuming).

Obs. Primo aspectu differt a praecedentibus apertura parvula, peristomatis marginibus fere contiguis, late reflexis.

787. *H. lugubris* Jan. †

T. subglobosa, depressiuscula, imperforata, carinata, olivaceo-brunnea, fasciis 2 fuscis perleviter zonata; apertura subovata; perist. marginatum, subreflexum, album. — Alt. 4, diam. 8 lin. Apert. diam. long. 4, transv. 5 lin. (Jan.)

Helix lugubris Jan Mantissa p. 1.

Habitat in America meridionali.

§. 58.

788. *H. Chemnitziana* Pfr.

T. imperforata, depressa, solida, superne radiatim plicato-malleata, undique granulosa, sub epidermide olivacea rufa, acute carinata; spira subelevata, obtusa; anfr. 5 plani, ultimus basi convexus; apertura subtriangularis, intus nitida, carnea; perist. carneum, margine supero subexpanso, basali reflexo, dente 4 valido munito, columellari stricto, dilatato, appresso, inaequaliter

pluridentato. — Diam. maj. 57, min. 46, alt. 26 mill. (Mus. Cuming.)

Helix Chemnitziana Pfr. in Proc. Zool. Soc. 1845. p. 43.

Habitat . . . ?

789. **H. imperator (Polydontes) Montfort.**

T. imperforata, depressa, carinata, oblique-rugosa et striata, fusca, ad carinam pallide cingulata; anfr. 5 planiusculi; apertura lunato-rotundata; perist. valde incrassatum, callosum, subreflexum, album, intus dentibus 7 inaequalibus, obtusis instructum. — Diam. maj. 52, min. 43, alt. 28 mill. (Mus. Brit.)

Helix imperator (Helicodonta) Fér. pr. 112. Hist. t. 52. f. 4.

— — Wood suppl. t. 7. f. 50.

β. Alba, dentibus aperturæ pluribus, irregularibus:

Helix imperator var. Fér. t. 52. f. 1—3.

— — var. Chemn. l. c. t. 67. f. 8.

Habitat in America meridionali (Beck).

790. **H. magica Férussac.**

T. imperforata, ovato-depressa, laevis, lutea, lineis et flammis rubris pulcherrime picta, superne cingulo nigro ornata; anfr. 5 convexiusculi; apertura ovalis; perist. late reflexum, album, callosum, 11-dentatum, marginibus callo crasso junctis. — Diam. maj. 49, min. 38, alt. 28 mill. (ex ic.)

Helix magica (Helicodonta) Fér. hist. t. 54 A. f. 7—9.

Habitat . . . ? — Num revera in terrarum orbe existens?

791. **H. cepoides Lea.**

T. imperforata, subglobosa, tenuis, glabriuscula, ad suturam irregulariter striata, rufa, basi pallidior; spira conoidea; anfr. 7 tumidi; columella brevissima, albo-callosa, unidentata; apertura late lunaris, intus alba; perist. tenue, subreflexum. — R. a. = 7:8. — Diam. maj. 50, min. 46, alt. 42—45 mill. (Coll. Nr. 480.)

Helix cepoides Lea in Philad. tr. 1841. p. 462. t. 12. f. 14.

— — Sow. in Proc. Zool. Soc. 1840. p. 88.

Cepolum Nicolsinianum Montf. p. 151. t. 38.

Pleurodonta cepa Beck ind. p. 34.

β. Minor: diam. maj. 33, min. 27, alt. 16½ mill. (Coll. Nr. 482.)

Helix cepa Fér. t. 53 A. f. 1.

Habitat in insula Haiti.

Obs. Prorsus diversam censeo speciem delineatam in Fér. hist. t. 53 A. f. 3, quae non solum dente basali, sed etiam impressione laterali carere videtur.

794. *H. lychnuchus* Müller.

T. imperforata, orbiculato-conoidea, solida, fusca, undique granulata; spira conoidea, obtusa; sutura linearis; anfr. 5 subplanulati, ultimus acute carinatus, antice subito deflexus, infra carinam profunde scrobiculatus; apertura subrhombea; perist. fuscum, incrassatum, marginibus callo crasso junctis, supero vix expanso, basali dilatato, reflexo, intus bidentato: dentibus intrantibus, antico multo validiore. — Diam. maj. 29, min. 26, alt. 15 mill. (Coll. Nr. 483.)

Helix lychnuchus Müll. verm. II. p. 84. N. 278 *).

— — (Helicodonta) Fér. pr. 126. Hist. t. 56 A. f. 2—8.

— — Chemn. ed. II. Helix N. 349. t. 62. f. 13. 14.

Carocolla lychnuchus Lam. 12. p. 98. ed. Dh. p. 147.

Pleurodonta lychnuchus Beck ind. p. 33.

Lucerna lychnuchus Swains. Malac. p. 329.

Lister t. 96. f. 97.

Habitat in insulis Martinique, Guadeloupe.

Obs. Speciem descriptam ubique in Museis nomine *H. lychnuchi* Müll. designatam vidi, nec dubito, eam veram Mülleri speciem esse, etsi synonyma non exacte quadrent. — Cl. Beck iconem Chemnitzianam *H. lucernae* ad *lychnuchum* refert, quamvis Müllerus *lucernam* ex specimine Chemnitziano descripserit. (Conf. Nr. 822.)

795. *H. granifera* Gray.

T. imperforata, orbicularis, depresso-conica, solida, pallide brunnea, granis minutis albis aspersa; spira convexa, obtusa; anfr. 5 convexusculi, ultimus acute carinatus, antice deflexus, subgibbus, basi planus, vix scrobiculatus; apertura subhorizontalis, transverse triangulari-ovalis; perist. album, incrassatum, marginibus callo albo junctis, supero expanso, reflexiusculo, basali lato, strictiusculo, dentibus 2—3 non intrantibus munito. — Diam. maj. 28, min. 23, alt. 14 mill. (Coll. Nr. 484.)

Helix granifera Gray in Proc. Zool. Soc. 1834. p. 68.

— — Müll. synops. p. 9.

*) T. imperforata, carinata, alba, trochiformi, fasciis fulvis; apertura transversa, bidentata. (List. t. 90. f. 90.) Diam. 11 lin. — Differt ab *H. lucerna* vertice, non anfractibus, depresso et fascia in superiore anfractus parte duplici, altera juxta marginem, altera juxta carinam, in inferiore infra carinam posita. (Müll. l. c.)

Helix granifera Chemn. ed. II. *Helix* N. 350. t. 62. f. 16. 17.

— *perplexa* Fér. hist. t. 56 A. f. 1. (Spec. min. detrit.)

Pleurodonta granifera Beck ind. p. 33.

Habitat vulgaris in India occidentali (Gray), in insulis Trinidad, Granada (Beck).

796. *H. sinuata* Müller.

T. imperforata, depresso-globosa, solida, undique elegantissime granulata, saturate castanea, pallide unifasciata, basi violascens; spira semiglobosa; anfr. 5 convexiusculi, ultimus carinatus, basi convexus, antice deflexus, valde constrictus et scrobiculatus; apertura horizontalis, angustissime lunaris; perist. subincrassatum, marginibus callo junctis, supero expanso, basali quadridentato: dentibus compressis, intrantibus. — Diam. maj. 26, min. 22, alt. 16 mill. (Coll. Nr. 485.)

Helix sinuata Müll. verm. II. p. 18. N. 217.

— — Chemn. IX. P. 2. p. 91. t. 126. f. 1110—12.

— — (Helicodonta) Fér. pr. 116. Hist. t. 54. f. 1.

— — Lam. 50. p. 79. ed. Dh. p. 48.

— *sinuosa* Gmel. p. 3622. N. 163.

— — Fér. pr. 117. Hist. t. 54. f. 3.

Habitat in insula Jamaica.

Obs. Rarissime occurrunt specimina aperte umbilicata.

797. *H. Bronni* Pfr.

T. imperforata, semiglobosa, striatula, sub lente punctata, nitidula, castanea, apice obtuso pallida; anfr. 5 vix convexiusculi, ultimus obsolete carinatus, basi planiusculus, granulatus, coerulescenti-albidus, infra carinam fascia 1 castanea ornatus, antice deflexus, profunde scrobiculatus; apertura subhorizontalis, elliptico-oblonga; perist. late incrassatum, marginibus callo tenui junctis, basali dilatato, reflexo, fusco-maculato, intus 4-dentato:

dentibus 2 anticis majoribus, compressis, a margine remotis. — Diam. maj. 25, min. 24, alt. 45 mill. (Coll. Nr. 486.)

Helix Bronni Pfr. in Proc. Zool. Soc. 1845. p. 131.

— — Chemn. ed. II. Helix N. 80. t. 45. f. 9. 10.

— *sinuata* var. Fér. hist. t. 54. f. 2.

Habitat in insula Jamaica (Adams).

Obs. Differt ab H. sinuata testa semiglobosa, glabriuscula, colore constante et dentibus omnibus minoribus, anticis profundioribus, approximatis, basi junctis, extus scrobiculum confluentibus formantibus.

798. *H. punctata* Born.

T. imperforata, conoideo-globosa, solida, oblique antrorsum plicatulo-striata, castanca, zona pallida circumdata; spira obtuse conoidea; anfr. 5½ carinati, ultimus teres, basi inflatus, antice subito deflexus, superne gibbus et constrictus; apertura obliqua, lunaris, ringens; perist. fusco-aurantium, crassum, marginibus callo lato, dentem magnum, obliquum emittente, junctis, supero brevi, stricto, dextro bidentato, basali dentem 4 majorem et minores nonnullos gerente. — Diam. maj. 23, min. 21, alt. 48 mill. (Coll. Nr. 487.)

Helix punctata Born test. p. 372. t. 44. f. 17. 18.

Pleurodonta Josephinae Beck ind. p. 33.

β. Unicolor lutescens vel virens, maculi basali castaneā: Fér. t. 56. f. 5—8.

Habitat in insula Guadeloupe.

810. *H. barbadensis* (Carocolla) Guilding. †

T. solida, transversim plicata, ferrugineo-fusca, fascia angusta, flavida; labiis crassis, sordido-lividis; dentibus obsoletioribus. — Junioris testa acuta, adultae solida, rotundata, adaphana. (G.)

Carocolla barbadensis Guild. in Zool. Journ. IV. p. 167.

Helix Guildingii Pfr. Symb. II. p. 81.

β. Pallida, flava.

Habitat copiosissime sub lapidibus Barbadiensibus (Guild.).

Obs. Specimina vidi nonnisi incompleta in Musaeo Britannico.

* * *

811. *H. aspera* Férussac.

T. imperforata, transverse pyriformis, solida, undique confertim et irregulariter granosa, alba; spira brevis, obtusa, strigis nonnullis rufis fulgurata; anfr. 4 planulati, rapide accrescentes, ultimus obsolete angulatus, turgidus, a latere subcompressus, antice deflexus; apertura angusta, transverse ovalis, intus nitida, fauce castaneo-fulva; perist. valde incrassatum, reflexum, marginibus callo junctis, supero repando, basali dilatato, prope colu-

mellam bidentato, aetate calloso, bisinuoso. — Diam. maj. 52, min. 36, alt. 32 mill.

Helix heteroclites Lam. 34. p. 74. ed. Dh. p. 43.

— *Lamarckii* var. Fér. t. 57. f. 2.

Habitat in insula Jamaica.

818. **H. Bainbridgci Pfr.**

T. obtecte umbilicata, depressa, subdiscoidea, solida, undique granulata, cinnamomea vel violacescens, basi pallidior; spira vix elevata, obtusa; anfr. 5 — $5\frac{1}{2}$ plani, ultimus rotundatus, ad peripheriam saepe albo-zonatus, basi convexusculus; apertura perobliqua, lunato-subtriangularis, intus nitida, carnea; perist. subincrassatum, fusco-carneum, marginibus callo junctis, supero late expanso, basali reflexo, subappresso, dente unico, valido, complanato instructo, columellari perdilatato, umbilicum medio-

crem obturante. — Diam. maj. 64, min. 50, alt. 30 mill. (Coll. Nr. 502.)

Helix Bainbridgei Pfr. in Proc. Zool. Soc. 1845. p. 44.

— — Chemn. ed. II. *Helix* N. 368. t. 63. f. 5. 6.

— *Lamarckii* var. *unident.* Fér. hist. t. 58. f. 1. 2.

Habitat in Demerara (Bainbridge).

Obs. Variat umbilico semiaperto. (Mus. Cuming.)

§19. *H. peracutissima* Adams. †

T. magna, imperforata, lenticularis, subtenuis, fusca, exile sagrinata; anfr. 5, inferi supra concavi, ultimus medio in angulum acutissimum, lamelliformem expansus, subtus convexus; apertura perdepressa, infra *H. sinuatae* Müll. similiter 4-dentata; labrum medio acute angulatum. — Div. 140°. Alt. 0,6, lat. max. 4,6, lat. min. 4,43 poll. (Ad.)

Helix peracutissima Adams in Bost. Proc. 1845. p. 15.

Habitat in insula Jamaica.

§20. *H. Martiniana* Pfr.

T. obteete perforata, discoidea, acute carinata, solida, striata et minutissime granulata, olivacco-fusca; spira depressa; anfr. 5 planulati, ultimus non descendens, basi inflatus, antice profunde serobiculatus; apertura depressa, late angulato-lunaris, intus laetea; perist. album, incrassatum, marginibus callo tenui junctis, supero expanso, basali reflexo, dentibus 2 conjunctis, columellari dilatato, dentibus 2 inaequalibus armato. — Diam. maj. 34, min. 30, alt. 14 mill. (Mus. Cuming.)

Helix Martiniana Pfr. in Proc. Zool. Soc. 1845. p. 44.

Habitat in insula Jamaica (Attanasio).

Obs. An forte eadem ac praecedens? — Variat testa subperforata. — Conf. *H. Schroeteriana* (Nr. 1045).

§21. *H. Okeniana* Pfr.

T. obteete perforata, orbicularis, utrinque convexiuscula, obtuse carinata, undique regulariter granulata; superne fusca, basi pallida; anfr. 5½ rotundato-planati, ultimus antice deflexus, basi profunde bisericulatus; apertura subhorizontalis, elliptica, coarctata; perist. carneo-fuscum, incrassatum, marginibus callo junctis, supero expanso, basali reflexo, tridentato: dentibus acquirantibus, 2 minoribus prope columellam, tertio majore superne sulcato. — Diam. maj. 37, min. 30, alt. 17 mill. (Mus. Cuming.)

Helix Okeniana Pfr. in Proc. Zool. Soc. 1845. p. 63.

Habitat in insula Jamaica: Savannah la Mar (Attanasio).

822. *H. lucerna* Müller.

T. obtecte perforata, orbicularis, glabriuseula, supra convexo-plana, fuseo-violacea vel pallide fulvescens, subtus inflata, albida, obsolete fulvo-cingulata, minutissime granulata; spira brevissima; sutura linearis, marginata; anfr. 5 planulati, ultimus convexus, obtuse earinatus, antice vix descendens; apertura late lunaris; perist. simplex, marginibus callo tenuissimo junctis, supero expanso, subincrassato, columellari brevi, dilatato, perforationem tegente, basali reflexo, calloso, bidentato: dentibus fere aequalibus, compressis, parum intrantibus. — Diam. maj. 32, min. 28, alt. 16 mill. (Coll. Nr. 503.)

Galaxias argillacea Beck ind. p. 42.

β. Minor: diam. maj. 20, min. 16, alt. 13 mill. (Spec.)

Helix argillacea var. Fér. t. 26. f. 3.

Habitat in insulis Timor et Rawak.

837. *H. cyclostomopsis* Lea. †

T. subglobosa, superne depressa, inferne inflata, longitudinaliter et minute striata, pellucida, cornea, late umbilieata; anfr. 4; spira depressa; apertura subcircularis; labrum crassum et reflexum; columella laevis, ad basin crassescens. — Diam. 0,9, long. 0,6 poll. (Lea.) — Diam. 22, alt. 14 mill. (ex ic.)

Helix cyclostomopsis Lea obs. I. p. 165. t. 19. f. 63.

Habitat . . . ?

Obs. Etsi umbilicus in diagnosi latus dicatur, tamen ex icone suspicor, speciem ab *H. argillacea* non satis diversam esse.

838. *H. campanula* Pfr.

T. umbilieata, globosa, solida, subtiliter et regulariter oblique striata, castanea; spira semiglobosa, apice obtuso pallida; anfr. $4\frac{1}{2}$ convexiusculi, ultimus antecedente vix latior, antee vix descendens, medio pallide cingulatus; apertura perobliqua, lunato-ovalis, intus livescens; perist. fuscum, subinerassatum, breviter reflexum, marginibus callo junctis, basali introrsum obsolete albo-unidentato, extrorsum dilatato, umbilicium angustum, profundum, semioccultante. — Diam. maj. 27, min. 23, alt. 21 mill. (Mus. Cuming.)

Helix campanula Pfr. in Proc. Zool. Soc. 1845. p. 65.

β. Pallide fuscescens, apice castanea, perist. albo. (Coll. com. de Seckendorff.)

Helix campanula var. Chemn. ed. II. Helix N. 694. t. 111. f. 13. 14.

Habitat . . . ?

Obs. Similis varietatibus quibusdam Bulimi brachyodontis.

839. *H. codonodes* Pfr.

T. umbilicata, globoso-eonoidea, solida, oblique striatula, lineis spiralibus confertis subtilissime sculpta, nitida, alba vel

*) T. subglobosa, perforata, diaphana, eorneo-rufescente; spira brevi, obtusa; labro margine albo, reflexo. — Diam. $40\frac{1}{2}$ lin. (Lam. l. c.)

straminea, castaneo 1—2fasciata; spira campanulata, apice obtusiuscula; anfr. $5\frac{1}{2}$ vix convexi, ultimus antice descendens, basi juxta aperturam gibboso-subconstrictus; apertura obliqua, subquadrangulati-rotundata; perist. incrassatum, reflexum, marginibus subapproximatis, callo nitido junctis, columellari intus protuberantia dentiformi munito, extus dilatato, patente, sinuoso. — Diam. maj. 20, min. 17, alt. 17 mill. (Mus. Cuming. et Coll. Nr. 514.)

Helix codonodes Pfr. in Proc. Zool. Soc. 1846. p. 112.

— — Chemn. ed. II. Helix N. 693. t. 111. f. 15. 16.

Habitat in insula Nicobarica majore (Theod. Philippi).

840. *H. Jannellei* Le Guillou. †

T. globoso-obtusata, dilute olivacea; anfr. 5 transversim tenuerugulosi (rugis undulatis), superne rotundati; sutura profunda; spira convexa, obtusa; apertura obliquissima, albida; labrum reflexum, album; labium obliquum, reflexum, umbilicum profundum occultans. — Diam. et alt. 25 mill. (G.)

Helix Jannellei Le Guill. in Revue Zool. 1842. p. 137.

Habitat in Australia septentrionali.

Obs. «Variat spira conico-obtusata, umbilico clauso. In junioribus ultimis anfractus superne subcarinatus».

841. *H. Tili* Anton. †

T. globosa, tenuis, subtiliter striata, transversim regulariter striatula, lutescenti-alba, pervio-umbilicata; anfr. 5 convexi; sutura profunda; apertura subrotunda; perist. acutum, vix reflexiusculum. — Diam. 9, alt. $5\frac{1}{2}$ lin. (A.)

Helix Tili Ant. Verzeichn. p. 34. N. 1288.

Habitat . . . ?

842. *H. leptogramma* Pfr.

T. umbilicata, globosa, tenuis, striata, lineis impressis, concentricis, confertis sculpta, carneo-albida, superne fasciis 3—4 angustis, rufis ornata; anfr. $4\frac{1}{2}$ convexiusculi, ultimus inflatus, antice breviter descendens; apertura vix obliqua, rotundato-lunaris, intus concolor; perist. album, simplex, breviter expansum, marginibus callo tenuissimo, diffuso junctis, columellari valde dilatato, albo, nitido, reflexo, umbilicum angustum semioccultante. — Diam. maj. 17, min. 14, alt. 13 mill. (Mus. Cuming.)

Helix leptogramma Pfr. in Proc. Zool. Soc. 1845. p. 127.

Habitat in Australia septentrionali «Cynet Bay».

843. **H. pachyloma Menke.** *Berlandieriana Moricand*
~~conf. H. n. 1848. pag. 115~~

T. augustissime umbilicata, conoideo-globosa, tenuiuscula, subtilissime striatula, pallide cornea; spira conoidea, vertice acutiusculo; anfr. $3\frac{1}{2}$ vix convexiusculi, ultimus ventrosus, antice constrictus, non descendens; apertura subverticalis, subtriangulato-lunaris; perist. breviter expansum, intus callosum, margine dextro cum supero brevi angulum obsoletum forinante, columellari ad umbilicem reflexo. — Diam. maj. 42, min. $40\frac{1}{2}$, alt. 9 mill. (Coll. Menke.)

Helix pachyloma Menke in Zeitschr. f. Mal. 1847. p. 32.

Habitat in Texas.

Obs. Hoe loco conferantur species in §. 54 enumeratae, interdum aperte perforatae.

*
*
*

844. **H. Mobiliana Lea. †**

T. subglobosa, rufo-cornea, nitida, perforata; spira brevis, obtusa; sutura impressa; anfr. 6 convexi; apertura lunata; labrum reflexum. (L.) — Dimens.?

Helix Mobiliana Lea in Proc. Am. phil. Soc. 1844. II. p. 82.

Habitat in America boreali, prope Mobile Alabamae.

§. 61.

845. **H. pileiformis Moricand.**

T. perforata, trochiformis, tenuis, striata, fragilis, olivaceo-fusca; spira elata, conica, acuta; anfr. 7 planati, ultimus carinatus, basi convexiusculus; apertura subquadrangularis; perist. simplex, marginibus callo tenui junctis, dextro et basali expansis, columellari dilatato, reflexo, foramen occultante. — Diam. maj. 42, min. 44, alt. $44\frac{1}{2}$ mill. (Coll. Nr. 542.)

Helix pileiformis Moric. Mém. Gen. VII. P. II. p. 420. t. 2. f. 2.

— — *Lam.* ed. Dh. 224. p. 134.

— — *Chemn.* ed. II. *Helix* N. 345. t. 55. f. 9. 40.

Geotrochus pileiformis Beck ind. p. 47.

Bulimus pileiformis Pfr. Symb. II. p. 420.

Habitat in Brasilia: Illheos (Moric.).

Obs. Ex affinitate cum *Bul. opalino* Sow. aliisque speciebus *H. pileiformem* antea *Bulinis* adnumeraveram.

846. **H. pileus Müller.**

T. perforata, coniformis, laevigata, alba, rufo varie fasciata; spira elongata, acutiuscula; anfr. 6 planiusculi, ultimus obsolete angulatus, basi planulatus, castaneus; columella brevis, obliqua;

apertura lunato-ovalis, intus concolor; perist. simplex, late expansum, album, margine supero antrorsum subarcuato, basali reflexo, columellari dilatato, reflexo, perforationem fere occultante. — R. a. = 3 : 7. — Diam. maj. 25, min. 22, alt. 25 mill. (Coll. Nr. 513.)

*

848. *H. Sagraiana* Orbigny.

T. anguste umbilicata, subtrochiformis, liris permultis, concentricis, acute elevatis cincta, solidiuscula, albida; spira conoi-

dea; anfr. $6\frac{1}{2}$ vix convexiusculi, ultimus subcarinatus, basi convexiusculus, eirea umbilicium subcompressus; apertura obliqua, lunaris; perist. breviter reflexum, margine columellari dilatato, tuberculato-sinuato. — Diam. maj. 32, min. 27, alt. 19 mill. (Coll. Nr. 514. Spec. californ.)

Helix Sagraiana Orb. moll. cub. I. p. 143. t. 7. f. 4—6. *)

— — Chemn. ed. II. *Helix* N. 342. t. 55. f. 1. 2.

Habitat in insulae Cubae regionibus intimis (Orb.), California (Sowerby).

849. *H. labium* Férussac.

T. anguste umbilicata, conoidea, oblique striatula, nitida, tenuis, pallide fulva, rufo-unicingulata; spira late conoidea, apice acuta; anfr. 6 convexiusculi, ultimus depressiusculus, basi subplanus; columella brevis, obliqua; apertura angulato-lunaris, intus albida, fascia pellucida; perist. tenue, latissime expansum, reflexum, album, latere dextro angulatum, margine columellari umbilicium semioeculante. — Diam. maj. 38, min. 34, alt. 23 mill. (Coll. Nr. 515.)

Helix labium (Helicigona) Fér. hist. t. 64. f. 6.

— — Pfr. Symb. III. p. 75.

— — Chemn. ed. II. *Helix* N. 343. t. 55. f. 3. 4.

Habitat in insula Mindanao Philippinarum. (Mus. Cuming.)

850. *H. Pennantiana* Pfr.

T. anguste umbilicata, orbiculato-conoidea, acute carinata, tenuis, striatula, irregulariter et leviter malleata, unicolor carnea, apice rufesens; anfr. $5\frac{1}{2}$ vix convexiusculi, ultimus antice vix descendens, basi planiusculus; apertura perobliqua, angulato-lunaris, intus alba; perist. roseum, late expansum, margine basali reflexo, columellari brevi, striatusculo, umbilicum fere tegente. — Diam. maj. 37, min. 30, alt. 20 mill. (Mus. Cuming.)

Helix Pennantiana Pfr. in Proc. Zool. Soc. 1843. p. 67.

Habitat . . . ?

Obs. Differt ab *H. labio* testa malleata et acute carinata, et apertura depressa.

851. *H. grata* (Carocolla) Michelin.

T. anguste umbilicata, trochiformis, tenuis, striata, eitrina, epidermide fulva faseiatim obducta; spira conica, acuta; anfr. 5

*) T. conico-depressa, perforata, tenuis, transversaliter sulcata; spira subelevata, conica; anfr. 7 minime carinati; apertura semilunaris; labrum margine reflexum; columella incrassata, tuberculato-sinuata. (Orb. l. c.) — Diam. maj. 28, min. 25, alt. 20 mill. (ex ic.)

planiusculi, ultimus acute carinatus, basi convexiusculus; columella oblique descendens, dilatata; apertura subrhombea; perist. simplex, late expansum, margine columellari dilatato, arcuatim reflexo, umbilicum occultante, nec obtegente. — Diam. maj. 28, min. 23, alt. 18 mill. (Mus. Cuming.)

Carocolla grata Mich. in Guér. mag. 1831. t. 9.

Habitat . . . ?

Obs. II. multizonae similis, umbilico majore distincta.

855. *H. Poeyi* Petit.

T. anguste umbilicata, orbiculato-convexa, tenuis, confertim costulato-striata, badia, epidermide decidua, subvelutina; anfr. 5 planiusculi, ultimus carinatus, antee deflexus; columella brevis, verticalis; apertura subangulato-lunaris; perist. simplex, margine supero expanso, basali reflexo, columellari valde dilatato, foramen semioccultante. — Diam. maj. 26, min. 24, alt. 16 mill. (Coll. Nr. 516.)

Helix Poeyi Petit in Guérin mag. 1836. t. 74.

— — *Orb.* moll. cub. I. p. 150. t. 5. f. 11—13.

— — *Chemn.* ed. II. *Helix* N. 314. t. 55. f. 5. 6.

— *staminea* Menke in litt. olim.

Habitat in insulae Cubae regionibus interioribus.

856. *H. Blainvillei* Le Guillou. †

T. pyramidata, trochiformis, umbilicata, albido-lutescens; anfr. 7—8 tenue striati, depresso-convexi, linea fusco-rufa inferne picti, ultimus earinatus, subtus plano-convexiusculus, striis obsoletis concentricis interdum notatus; apertura subquadrata, reflexa, albida, antierius subangulata; columella violascens, umbilicium concolorem, profundum non occultans. — Diam. 19—21, alt. 23—25 mill. (G.)

Helix Blainvillei Le Guill. in Revue zool. 1842. p. 140.

Habitat in insula Arrow.

857. *H. Arrowensis* Le Guillou. †

T. trochiformis, carinata, subumbilicata, alba, hyalina; anfr. 5 convexiusculi, basi depressi, substriati, ultimus earina acuta instructus, subtus convexo-depressus; spira conica, supra obtusa; apertura subsemiovata, margine reflexa; labium latius, umbilicium suboccultans. — Diam. 17, alt. 12 mill. (G.)

Helix Arrowensis Le Guill. in Revue zool. 1842. p. 139.

Habitat in insula Arrow.

858. *H. reflexiuscula* Pfr. †

T. trochoidea, earinata, vix umbilicata, hyalina, subvitrea; anfr. 6 subconvexi, basi depressi, tenue striati, ultimus earina

acuta, sursum reflexiuscula instructus, subtus convexo-depressus; apertura sublanccolata, antierius acuta, basi rotundata, subreflexa, versus umbilicam oblique rectiuscula. — Diam. 15, alt. 10 mill. (G.)

Helix hyalina Le Guill. in Revue zool. 1842. p. 139. Nec Fér.

— *reflexiuscula* Pfr. Symb. II. p. 98.

Habitat in insulis Salomon.

859. *H. Tritoniensis* Le Guillou. †

T. trochoidea, subumbilicata, albido-fulva, substriata; anfr. 5—6 convexiusculi, ultimus rotundatus, subtus convexus; spira conico-depressa; apertura angusta; labrum subreflexum; umbilicus minimus, punctiformis. — Diam. 9, alt. 7½ mill. (G.)

Helix Tritoniensis Le Guill. in Revue zool. 1842. p. 138.

Habitat in Nova Guinea, ad Triton-Bay.

860. *H. albula* Le Guillou. †

T. discoidea, albula, umbilicata, acute carinata, supra conico-depressa, subacuta, tenuiter striata, subtus depresso-convexa, crebre striata; anfr. 5½ depresso-convexi, ultimus carinatus: carina rufescente; apertura suboblunga, antierius acuta, basi depresso-recta; perist. superne subreflexum, subtus et antierius lamina lata, reflexa, acuta; umbilicus profundus, infundibuliformis. — Diam. 27, alt. 16 mill. (G.)

Helix albula Le Guill. in Revue zool. 1842. p. 139.

Habitat in insula Ternate.

861. *H. ternatana* Le Guillou. †

T. orbiculato-subconoidea, umbilicata, rufa, tenuiter striata; anfr. 7 subconvexi, ultimus margine carinatus: carina albida; infima facies depresso-convexiuscula; umbilicus profundus, margine effuso; spira conico-depressa, obtusa; apertura obliqua, subquadrata, marginata, alba, subreflexa, basi incrassata. — Diam. 22, alt. 12 mill. (G.)

Helix Ternatana Le Guill. in Revue zool. 1842. p. 138.

Habitat in insula Ternate.

§. 62.

862. *H. Ghiesbreghti* Nyst.

T. umbilicata, orbiculato-convexa, striata, epidermide pilosa induta, brunnea, zonis nigricantibus et luteis ornata; anfr. 5½ convexiusculi, ultimus magnus, rotundatus, circa umbilicam mediocrem subcompressus; apertura lunato-rotundata; perist. expansum, album, breviter reflexum, marginibus conniventibus,

columellari dilatato. — Diam. maj. 63, min. 53, alt. 37 mill. (Mus. Cuming. et Gruner. Coll. Nr. 517. Spec. juv.)

Helix Ghiesbreghtii Nyst in Bull. Brux. VIII. 1844. p. 343. f. 2.

— — Chemn. ed. II. Helix N. 317. t. 56. f. 1. 2.

β. Fulva, superne rufo-zonata: diam. maj. 57, min. 45, alt. 33 mill.

Habitat in Mexico: prope Chiapa (Nyst), in America centrali (Mus. Cuming).

863. *H. Hogoleuensis* Le Guillou. †

T. orbiculato-conoidea, crassiuscula, umbilicata, sub epidermide castanea rufescens, subtus convexo-depressa; anfr. 5 supra depresso-declives, longitudinaliter rugosi, saepius eleganter ac crebre striati, supremi pallidi, obtuse planulati, infimus in junioribus subangulatus, in adultis sulcis irregularibus 2 cinctus; apertura pallide fulva, fascia rufa angusta saepius in medio decurrente: labrum margine valde incrassatum, superne oblique productum, subangulosum, inferne et intus sinuatum; umbilicus angustus, profundus, extus in canali continuatus, angulo externo cinctus. — Diam. 49, alt. 28 mill. (G.)

Helix Hogoleuensis Le Guill. in Revue zool. 1845. p. 187.

β. Anfractibus inferioribus basi fascia castanea, angusta et saltem intus perspicua pictis. — Diam. 38, alt. 20 mill.

γ. Testa sub epidermide lutescente alba, fascia extus et intus carente. — Diam. 39, alt. 20 mill.

Habitat frequentissima in insulis Hogoleu Carolinarum.

864. *H. eximia* Pfr.

T. umbilicata, depresso-globosa, oblique rugosa et confertissime granulosa, olivaceo-cornea, fasciis 5 fusco-viridibus ornata; anfr. 4½ convexiusculi, rapide accrescentes, ultimus permagnus, circa aream umbilicarem fuscam compresso-inflatus; apertura lunato-ovalis, intus margaritacea, lilacina; perist. simplex, anguste reflexum, umbilicum angustum semitegens. — Diam. maj. 44, min. 32, alt. 26 mill. (Mus. Cuming. et Coll. Nr. 518. Spec. juv.)

Helix eximia Pfr. in Phil. Icon. I. 7. p. 153. t. 5. f. 6.

— — Pfr. in Proc. Zool. Soc. 1845. p. 41.

— — Chemn. ed. II. Helix N. 336. t. 60. f. 23. 24.

Habitat in America centrali, prope Veracruz prov. Honduras.

865. *H. Ineci* Pfr.

T. umbilicata, depresso-globosa, solidula, striata, sub epidermide pallide fulva alba, fasciis angustis castaneis cingulata; spira elevata, acutiuscula; anfr. 7 vix convexiusculi, ultimus circa

umbilicium medioerem, pervium subcompressus; columella arcuata; apertura perobliqua, lunato-ovalis; perist. album, tenue, intus sublabiatum, margine dextro vix expanso, basali reflexo, columellari in laminam triangularem dilatato, umbilicum semitigente. — Diam. maj. 38, min. 32, alt. 28 mill. (Coll. Nr. 519.)

Helix Incei Pfr. in Proc. Zool. Soc. 1845. p. 126.

— — *Phil. Icon.* II. 11. p. 83. *Helix* t. 7. f. 3. *T. 10. f. 3.*

— — *Chemn. ed. II.* *Helix* N. 325. t. 58. f. 4—3.

β. Minor, epidermide castanea, fasciis indistinctis, anfractu ultimo basi flavo. — Diam. maj. 32, min. 27, alt. 24 mill. (Mus. Cuming.)

Habitat in Australia septentrionali (Ince).

866. *H. cicatricosa* Müller.

T. sinistrorsa, umbilicata, depresso-globosa, tenuiuscula, irregulariter rugosa et cicatricosa, fulvicanti-flava, lineis et fasciis rufis varie ornata; anfr. $5\frac{1}{2}$, ultimi 2 inflati, supremi planulati, ultimus ad peripheriam angulatus, ad umbilicum medioerem, pervium compressus; apertura lunaris, intus margaritacea; perist. expansum, subincrassatum, marginibus callo tenui junctis, columellari breviter areolato, lato expanso, umbilicium semitigente. — Diam. maj. 40, min. 32, alt. 23 mill. (Coll. Nr. 520.)

Helix cicatricosa Müll. verm. II. p. 42. N. 242.

— — *Chemn.* IX. P. 1. p. 4. Vign. f. A. t. 109. f. 923.

— — *Chemn. ed. II.* *Helix* N. 64. t. 12. f. 1. 2. 7—9.

— *cicatrosa* Lam. ed. Dh. 132. p. 89.

— *senegalensis* *Chemn.* IX. P. 1. p. 85. t. 109. f. 917. 18.

— — *Lam.* 31. p. 74. ed. Dh. p. 42.

— — (*Helicella*) *Fér.* pr. 489. Hist. t. 78. f. 1. 2.

— *chinensis* *Voigt* in Cuv. *Thierr.* III. p. 61.

Ariophanta cicatricosa Beck ind. p. 3.

Kämmerer t. 11. f. 6.

Habitat in China: Woosung. — Nec in prov. Senegalensi.

867. *H. monochroa* Sowerby.

T. umbilicata, semiglobosa, tenuiuscula, pallide brunnea, interdum rufo varie fasciata, minute rugulosa; spira medioeris; anfr. $4\frac{1}{2}$ convexiusculi, ultimus rufo-bifasciatus; umbilicus medioeris, pervius; apertura perobliqua, lunato-ovalis, intus laetea; perist. extus fuscum, subincrassatum, reflexum, marginibus callo tenui junctis, columellari crasso, lato expanso, umbilicum semitigente. — R. a. = 3 : 5. — Diam. maj. 50, min. 40, alt. 30 mill. (Coll. Nr. 521.)

Helix monochroa Sow. in Proc. Zool. Soc. 1841. p. 1.

Helix monochroa Pfr. Symb. H. p. 34.

— — Chemn. ed. II. *Helix* N. 324. t. 57. f. 1—3.

Habitat in insula Tablas Philippinarum (Cuming).

868. *H. mercatoria* Gray.

T. umbilicata, turbinato-depressa, solida, costulato-striata, fulva, zona unica rufa, utrinque pallide marginata circumdata; spira elevata, obtusiuscula; anfr. $6\frac{1}{2}$ convexiusculi, ultimus obsolete angulatus, basi inflatus; umbilicus angustissimus, vix pervius; apertura lunaris; perist. inerassatum, breviter reflexum. — Diam. maj. 38, min. 34, alt. 25 mill. (Mus. Brit.)

Helix mercatoria Gray in Mus. Brit.

— — Pfr. in Zeitschr. f. Malak. 1845. p. 154.

Habitat in China.

869. *H. Sauliac* Pfr.

T. umbilicata, globoso-depressa, solidiuscula, oblique striata, fulvida, medio fascia unica, alba, utrinque rufo-marginata ornata; spira brevis, obtusa; anfr. 4 vix convexiusculi, ultimus basi subplanatus, antice subito deflexus, circa umbilicum angustum, pervium rufus; apertura perobliqua, lunato-ovalis; perist. breviter reflexum, marginibus conniventibus, callo tenui junctis, columellari castaneo, valde dilatato, umbilicum fere occultante. — Diam. maj. 32, min. 27, alt. 20 mill. (Mus. Cuming. et Saul.)

Helix Sauliae Pfr. in Proc. Zool. Soc. 1845. p. 72.

Habitat . . . ?

870. *H. chlorozona* Gratcloup. †

T. orbiculato-subconoidea, subtus convexa, late umbilicata, nitida, subdiaphana, rufo-castanea, oblique tenuiter striata; anfr. 4—5; umbilicus pervius; apertura ovata; labrum subreflexum, marginatim luteo-albescens. — Diam. 30, alt. 48 mill. (Gr.)

Helix chlorozona Grat. in Act. Bord. XI. p. 409. t. 1. f. 4.

Habitat in insula Madagascar (Duisabo).

Obs. «Differt ab *H. Nuttalliana* zonarum dispositione, apertura non rotundata, spira conoidea, anfractuum numero.»

871. *H. lucana* Müller.

T. aperte umbilicata, depresso-globosa, subpellucida, nitida, superne lutco-fulvescens, subtus et in suturis alba; anfr. 5, supremi lente accrescentes, planulati, ultimus magnus, convexus; apertura lunato-rotundata; perist. crassum, reflexum, marginibus

conniventibus, callo junctis. — Diam. maj. 30, min. 25, alt. 22 mill. (Coll. Nr. 522.)

Helix lucana Müll. verm. II. p. 75. N. 270.

— — Chemn. IX. P. 2. p. 124. t. 130. f. 1155.

— — Jonas in Wieg. Arch. 1839. I. p. 338. t. 9. f. 1. 2.

— — Chemn. ed. II. Helix N. 339. t. 60. f. 1. 2.

— *Lucana* Gmel. p. 3636. N. 78.

— — Wood ind. t. 34. f. 86.

Galaxias lucana Beck ind. p. 42.

β? Peristomate aurantiaeo:

Helix Fér. hist. t. 10 B. f. 3—5.

Habitat in Africa australi ad fluvium Elephantum! Tranquebar (Chemn.).

572. *H. Alexandri* (Dorcasia) Gray.

T. rimato-perforata, depressa, pallide fulva vel albida, superne minute costulato-striata, basi laevigata; spira vix elevata; anfr. 5 convexi, ultimus inflatus, antice subito perdeflexus, basi devians, rimam umbilicarem formans; apertura perobliqua, subcircularis; perist. continuum, undique expansum, reflexum. — Diam. maj. 32, min. 25, alt. 14 mill. (Mus. Brit.)

Dorcasia Alexandri Gray in Mus. Brit.

Helix Alexandri Pfr. in Zeitschr. f. Malak. 1845. p. 87. adnot.

Habitat circa Damarha Africae meridionalis (Alexander).

573. *H. prunum* Férussac.

T. umbilicata, subdepresso-globosa, fulva vel rufa, nitida, oblique striata, obsolete granulata; spira brevis; anfr. 6 planuli, ultimus ventrosus, basi inflatus, antice parum descendens; apertura lunato-subcircularis, intus nitida, rubescens; perist. album, breviter expansum, margine columellari superne dilatato, umbilicum angustum semioeculante. — Diam. maj. 30, min. 25, alt. 19 mill. (Coll. Walton.)

Helix prunum (Helicogena) Fér. pr. 34. Hist. t. 26. f. 7. 8.

— — Wood suppl. t. 7. f. 38.

— — Pfr. Symb. III. p. 75.

— — Gray New Zeal. t. 1. f. 2.

— — Chemn. ed. II. Helix N. 446. t. 74. f. 11—13.

— *argillacea* Gray in Griff. anim. kingd. t. 28. f. 2.

Arianta prunum Beck ind. p. 41.

β. Magis conica, interdum linea saturatiore circumdata: diam. maj. 28, min. 23, alt. 20 mill. (Coll. Walton.)

Helix prunum var. Fér. t. 26. f. 9.

Habitat in Australia.

874. **H. pelodes Pfr.**

T. umbilicata, subdepresso-globosa, tenuiuscula, striata et minute granulata, rubello-fusca; spira brevis, obtusiuscula; anfr. 6 convexiusculi, ultimus inflatus, antice breviter descendens; umbilicus mediocris, pervius; apertura lunato-circularis, intus margaritacea; perist. expansum, saturate carneum, margine columellari per dilatato, fornicatum reflexo. — Diam. maj. 34, min. 25, alt. 20 mill. (Coll. Nr. 523.)

Helix pelodes Pfr. in Proc. Zool. Soc. 1845. p. 126.

— — *Chemn.* ed. II. *Helix* N. 327. t. 58. f. 6. 7.

Habitat in littore septentrionali Australiae.

Obs. Differt ab *H. argillacea* (Nr. 836.) magnitudine, forma depressiore, testa granulata, umbilico latiore et peristomate non reflexo.

875. **H. Bonplandii Lamarck.**

T. anguste umbilicata, orbiculato-convexa, rufa, nigro obsolete bicingulata, striis incrementi et spiralibus tenuissimis subdecussata; anfr. $4\frac{1}{2}$ — 5 convexiusculi; apertura transverse ovalis, intus fusco-violacea; perist. simplex, margine dextro patulo, basali subincrassato, ad columellam reflexo, umbilicum fere tegente. — Diam. maj. 35, min. $28\frac{1}{2}$, alt. 20 mill. (Coll. Nr. 524. Spec. max.) Diam. maj. 29, min. 24, alt. $15\frac{1}{2}$ mill. (Spec. min.)

— *Helix Bonplandii Lam.* 26. p. 72. ed. Dh. p. 40.

— — *Fér. hist.* t. 46 A. f. 2.

— — *Deless. recueil* t. 26. f. 9.

— — *Orb. moll. cub.* I. p. 148. t. 7. f. 10 — 12.

— — *Chemn.* ed. II. *Helix* N. 337. t. 60. f. 3 — 6.

Habitat in insula Cuba, ubi in vicinia urbium Havana et Matanzas, praecipue in truncis Oreodoxae regiae, legi.

876. **H. supertexta Pfr.**

T. anguste umbilicata, orbiculato-conoidea, solidiuscula, striis incrementi et lincis impressis concentricis subdecussata, rufescenti-fulva, medio rufo-unifasciata, epidermide hydrophana radiatum induta; sutura profunda, crenulata; anfr. 5 convexi; apertura lunato-ovalis, intus fusca; perist. album, margine supero expanso, basali iucrassato, reflexo, umbilicum angustum semitegente. — Diam. maj. 24, min. 20, alt. 13 mill. (Coll. Nr. 525.)

Helix supertexta Pfr. in Zeitschr. f. Malak. 1845. p. 153.

— — *Chemn.* ed. II. *Helix* N. 338. t. 60. f. 7. 8.

Habitat in insula Cuba, ubi ad Punta Maya prope Matanzas rarissimam legit Dr. Gundlach.

Obs. Similis *H. Bonplandii*; differt magnitudine, epidermide, anfractibus convexioribus, minus ecleriter accrescentibus.

877. **H. bigonia Férussac.**

T. umbilicata, depresso-conoidea, tenuis, oblique striatula, fulvido-alba, fasciis rufis ornata, basi planulata; sutura linearis; spira late conoidea; anfr. $4\frac{1}{2}$ planiusculi, ultimus basi angulatus; umbilicus angustus, pervius; apertura horizontalis, elliptica; perist. simplex, margine supero expanso, basali late reflexo. — R. a. = 3 : 4. — Diam. maj. 23, min. 19, alt. 13 mill. (Coll. Nr. 526.)

Helix bigonia (Helicella) Fér. hist. t. 70. f. 2.

— — Lam. ed. Dh. 170. p. 108.

— — Phil. Icon. I. 4. p. 78. Helix t. 4. f. 7.

— — Chemn. ed. II. Helix N. 329. t. 58. f. 13. 14.

— *Samarensis* Pfr. in Proc. Zool. Soc. 1842. p. 87.

Planispira bigonia Beck ind. p. 30.

Habitat in insula Samar Philippinarum (Cuming).

877^a. **H. pedestris Gould. †**

T. rudis, depresso-globosa, late perforata, lutco-cornea, ad apicem virens, striis incrementalibus conspicuis inaequalibus et striis minutissimis confertis volventibus decussata; anfr. $5\frac{1}{2}$ convexiusculi, ultimus ventricosus, prope aperturam deflexus; apertura obliqua, transversa, rotundato-lunaris; perist. reflexum, album, ad basin dilatatum, juxta columellam sinuatum. — Lat. $\frac{7}{8}$, alt. $\frac{1}{2}$ poll. (G.)

Helix pedestris Gould 1846. Exped. shells p. 18.

Habitat in Nova Hollandia (New South Wales).

Obs. «Forma et aspectus H. zaletae; subius H. profundae similior».

878. **H. Recluziana Le Guillou. †**

T. orbicularis, supra convexo-depressa, rufo-fusca, subtus albida; anfr. 5 leviter ac crebre striati, convexo-depressi, ultimus rotundatus, fascia alba, linea rufa superne marginata circumcinctus; apertura subrotunda, reflexa, fusco-tincta; columella dilatata, intus truncata et obtuse unidentata; umbilicus consolidatus, rufescens. — Diam. 26—27, alt. 17—20 mill. (G.)

Helix Recluziana Le Guill. in Revue zool. 1842. p. 137.

Habitat . . . ?

879. **H. dichroa Pfr.**

T. umbilicata, globoso-depressa, tenuis, oblique striata, lineis confertis sub lente decussata, pallide cornea, diaphana, cingulis permultis, opacis, albis, interruptis ornata; anfr. 6 convexiusculi, ultimus antice deflexus, basi convexus; umbilicus angustus; apertura lunato-circularis, intus concolor; perist. tenue, marginibus conniventibus, supero expansiusculo, basali brevissime reflexo,

columellari dilatato, nitido, fornicatim reflexo. — Diam. maj. $4\frac{1}{2}$, min. $4\frac{1}{2}$, alt. $10\frac{1}{2}$ mill. (Coll. Nr. 527.)

Helix dichroa Pfr. Symb. III. p. 76.

— — Chemn. ed. II. Helix N. 684. t. 109. f. 16. 17.

Habitat . . . ?

880. *H. tenuicostata* Dunker.

T. perforata, depresso-globosa, solidula, oblique costulato-striata, alba, rufo-multifasciata; spira elevata, late conica; anfr. $4\frac{1}{2}$ convexiuseuli, sensim accrescentes, ultimus antice deflexus; apertura lunato-ovalis; perist. acutum, intus sublabiatum, margine dextro subexpanso, columellari reflexo, appresse dilatato, foramen fere tegente. — Diam. maj. 43, min. 44, alt. 8 mill. (Coll. Nr. 528.)

Helix tenuicostata Dkr. in Phil. Icon. II. 9. p. 6. t. 6. f. 43.

— — Chemn. ed. II. Helix N. 683. t. 109. f. 14. 15.

Habitat in republica mexicana?

Obs. Similis *H. gilvae*; differt spira elevatiuscula, perforatione angustissima, fere tecta, margine peristomatis basali subappresso, anfractibus lentius crescentibus. — Num forte *H. Troscheli* varietatibus adnumeranda? (Conf. Nr. 630.)

881. *H. gilva* Férussac.

T. umbilicata, globoso-depressa, tenuis, striis obliquis, confertis corrugata, earneo-albida, fasciis angustis nigricantibus vel fuseis cingulata; spira parum elevata, interdum obtusissima; anfr. $4\frac{1}{2}$ planiuseuli, celeriter accrescentes; apertura rotundato-lunata; perist. simplex, acutum, margine dextro patulo, columellari late reflexo, roseo, intus nigro-purpurascens. — Diam. maj. 43, min. $4\frac{1}{2}$, alt. 10 mill. (Coll. Nr. 529.)

Helix gilvus (Helicogena) Fér. pr. 36. Hist. t. 24 B. f. 4.

— *gilva* Orb. moll. cub. I. p. 457. t. 8. f. 9. 15.

— — Pfr. in Zeitschr. f. Malak. 1845. p. 23.

— — Chemn. ed. II. Helix N. 342. t. 60. f. 9. 10.

— *corrugata* Pfr. Symb. I. p. 44.

β . Fusca, fascia 1 albida, nigro-marginata ad peripheriam, altera ad suturam, perist. castaneo.

Helix gilva var. Chemn. ed. II. Helix t. 60. f. 11. 12.

Habitat in insula Cuba, var. β prope Holguin in parte septentrionali Cubae.

882. *H. sordida* Pfr.

T. perforata, globoso-depressa, striis incrementi rugosa, epidermide sordide cornea induta, obtuse carinata; spira depressa; anfr. $4\frac{1}{2}$ vix convexiuseuli, ultimus subtus inflatus; umbilicus

angustissimus, non pervius; apertura lunato-rotundata; perist. simplex, reflexiusculum. — Diam. maj. 44½, min. 40, alt. 7 mill. (Coll. Nr. 530.)

Helix sordida Pfr. Symb. II. p. 39.

— — Chemn. ed. II. Helix N. 344. t. 60. f. 49. 20.

Habitat in India orientali, prope Pondichery (teste Guérin).

883. *H. fasciola* Draparnaud. †

T. anguste umbilicata, subdepressa, tenuis, diaphana, cornea, albida; anfr. 5½ planiusculi, ultimus vix subcarinatus, linea rufa cinctus; apertura non rotundata, triangularis; perist. album, incrassatum, subangulatum. (Dr.) — Diam. maj. 45, min. 42, alt. 9 mill. (ex ic. Drap.)

Helix fasciola Drap. p. 440. t. 6. f. 22—24.

— *fasciola* Fér. pr. 252. Hist. t. 69 A. f. 4?

— — Lam. ed. Dh. 422. p. 84?

Habitat...? Accepit Drap. ex Rochelles, sed in Gallia indigena non est.

Obs. An forte varietas sequentis?

884. *H. similis* Férussac.

T. anguste umbilicata, subdepresso-globosa, minute striata, diaphana, pallide cornea, unicolor vel rufo-unizonata; spira magis minusve elata; anfr. 5 convexiusculi; apertura rotundato-lunaris; perist. album, reflexum, margine columellari subdilatato. — Diam. maj. 45½, min. 44, alt. 9—11 mill. (Coll. Nr. 534.)

Helix similis (Helicogena) Fér. pr. 262. Hist. t. 25 B. f. 4. 4. t. 27 A. f. 3.

Bradybaena similis Beck ind. p. 48.

β. Solidula, anfractu ultimo saepe angulato: diam. maj. 44, min. 42, alt. 8½ mill. (Spec. javan.)

— *Helix addita* Fér. pr. add. p. 74. Hist. t. 25 B. f. 2. 3.

γ. Major: diam. 49, alt. 42 mill. (ex ic.)

Helix similis var. Fér. hist. t. 27 A. f. 4. 2.

δ. Minima: diam. maj. 44, min. 42, alt. 40 mill. (Spec.)

ε. Cornea unicolor, peristomate rubello. (Mus. Cuming.)

Habitat in Brasilia circa Rio Janeiro frequens; in insulis Bourbon et Cuba (Rang); Java (Winter!); ins. Seychell.: Malé, Praslin (Dufo p. 498.); Bengalia et China: Macao (Cantor, Lea); var. δ in ins. Mauriti (Barclay).

884^a. **H. flavescens Mus. Berol.**

T. perforata, depresso-globosa, tenuis, laevigata, opaca, pallide flavescens, lineis spiralibus et strigis pellucidis variegata, cingulo 1 lacte castaneo ornata; spira brevis, obtusiuscula; sutura levis, plicatula; anfr. $4\frac{1}{2}$ vix convexiusculi, ultimus antice descendens, subconstrictus; apertura obliqua, rotundato-lunaris; perist. album, breviter expansum, margine basali strictiusculo, columellari superne perditato, perforationem suboccultante. — Diam. maj. 12, min. 10, alt. 8 mill. (Mus. Berol.)

Helix flavescens M. B. Chemn. ed. II. Helix N. 704. t. 112. f. 14. 15.

Habitat in Mexico; prope Papantla legit Deppe.

Obs. Species intermedia inter H. similem et griseolam, ab utraque umbilico angustissimo, etc. diversa.

885. **H. griseola Pfr.**

T. umbilicata, depresso-globosa, oblique striatula, nitidula, grisea, cingulis pallide fulvis, albo-marginatis circumdata; spira brevis; anfr. $4—4\frac{1}{2}$ vix convexiusculi; umbilicus angustissimus; apertura lunaris; perist. simplex, album, reflexiusculum, margine columellari subexpanso. — Diam. maj. 10, min. $8\frac{2}{3}$, alt. 6 mill. (Coll. Nr. 532.)

Helix griseola Pfr. Symb. I. p. 41.

— — Chemn. ed. II. Helix N. 344. t. 60. f. 17. 18.

Bradybaena pisum Beck ind. p. 18. (Ant. in litt.)

β. Pallide cornea, fascia 1 fulva, utrinque albo-marginata; spira magis elata; apertura rotundato-lunari. — Diam. maj. 10, min. $8\frac{2}{3}$, alt. $7\frac{1}{2}$ mill. (Spec.)

Habitat in republica mexicana, prope Veracruz (Hegewisch); var. β in America centrali.

§. 63.

886. **H. stenophala Menkc.**

T. umbilicata, globoso-depressa, subtiliter striata, lutescens, castaneo-trifasciata: fasciis lateralibus dilatatis et dilutis; anfr. $5\frac{1}{2}$ convexiusculi, ultimus inflatus, antice vix descendens; apertura late lunaris; perist. reflexiusculum, albo-labiatum, marginibus distantibus, columellari dilatato, reflexo, umbilicum angustum semioccultante. — Diam. maj. 31, min. 26, alt. 19 mill. (Coll. Nr. 533.)

Helix stenophala Mke syn. ed. II. p. 126.

— — Rossm. VII. p. 14. f. 458.

Helix stenomphala Chemn. ed. II. Helix N. 486. t. 80. f. 44. 42.

Campylaea stenomphala Beck ind. p. 25.

Habitat in Croatia.

SS7. *H. banatica* Partsch.

T. aperte umbilicata, globoso-depressa, minutissime deussata, opaca, olivaceo-fuscula, rufo-unifasciata; anfr. $5\frac{1}{2}$ planiusculi, ultimus non descendens, earinatus: carina antice evanescente; apertura oblique late lunaris; perist. acutum, albo-labiatum, margine dextro expanso, columellari dilatato, reflexo. — Diam. maj. 30, min. 26, alt. $45\frac{1}{2}$ mill. (Coll. Nr. 534.)

Helix banatica Partsch in Mus. Caes. Vindob.

— — Rossm. VII. p. 44. f. 457.

— — Chemn. ed. II. Helix N. 488. t. 80. f. 45. 46.

— *praetexta* Zgl. olim.

Habitat in Banatu Hungariae.

* * *

SS8. *H. fidelis* Gray.

T. umbilicata, orbiculato-conoidea, ruguloso-striata, superne albida, fusco-nebulosa, basi planulata castanea, infra peripheriam pallide unifasciata; anfr. 7 planiusculi; umbilicus medioeris, pervius; apertura obliqua, lunaris, intus lactea, fasciata; perist. superne expansum, basi incrassatum, subreflexum, margine columellari dilatato. — Diam. maj. 34, min. 30, alt. 20 mill. (Coll. Nr. 535.)

Helix fidelis Gray in Proc. Zool. Soc. 1834. p. 67.

— — Müll. synops. p. 8.

— — Chemn. ed. II. Helix N. 320. t. 57. f. 42. 43.

— *Nuttalliana* Lea obs. II. p. 88. t. 23. f. 74.

— — Binn. in Bost. journ. III. p. 369. t. 42.

Habitat in America boreali: Fort Vancouver, Oregon.

SS9. *H. Dupetithouarsii* Deshayes.

T. umbilicata, orbiculato-convexa, laevigata vel substriata, saturate castanea, superne pallidior, nigricanti-rufo cingulata; spira conoideo-obtusa; anfr. 7—8 angusti, convexiusculi, ultimus inflatus; apertura ovato-semilunaris, intus alba, fasciata; perist. simplex, brevissime reflexum, margine columellari arcuato, superne dilatato-reflexo, umbilicum medioerem non occultante. — Diam. maj. 29, min. 25, alt. 47 mill. (Mus. Cuming.)

Helix Dupetithouarsii Desh. in Revue zool. 1839. p. 360.

— — Guérin mag. 1844. t. 30.

— — Chemn. ed. II. Helix N. 349.

β. Major, superne fulvescens, fasciis saturationibus obsoletis, infra peripheriam subangulosam anfractus ultimi castanea; anfr. 5. — Diam. maj. 33, min. 28, alt. 11 mill. (Mus. Grun. et Coll. Nr. 536.)

Helix Dupetithouarsii var. Chemn. l. c. t. 56. f. 3—5.

Habitat in California.

Obs. Differt ab H. fidei testa magis globosa, anfract. angustis, ultimo inflato, etc. — Var. β H. bipartitae valde affinis videtur.

890. *H. californiensis* Lea.

T. anguste umbilicata, depresso-globosa, tenuis, rugulosa, granulata, fulva, luteo-maculata; spira subturbinata; anfr. 6—7 convexiusculi, ultimus supra peripheriam fascia uniea angusta, rufa cinctus, basi inflatus; apertura lunato-rotundata, intus alba, unifasciata; perist. intus albo-labiatum, reflexiuseulum, margine columellari dilatato, reflexo, umbilicum semioccultante. — Diam. maj. 28, min. 23, alt. 19 mill. (Coll. Nr. 537.)

Helix californiensis Lea obs. II. p. 99. t. 23. f. 79.

— — Chemn. ed. II. N. 324. t. 57. f. 14. 15.

β. Spira majore, depressiore:

Helix Nickliniana Lea obs. II. p. 100. t. 23. f. 84.

Habitat in California, prope «Columbia-River».

Obs. Variat praeterea umbilico magis minusve oblecto. — Conf. H. tudiculata Binn. (Nr. 740.)

890^a. *H. gulosa* Gould. †

T. globulosa, erassa, rudis, subperforata, obsolete earinata, pallide castanea, colore saturatiori nubilata et interdum fasciata; anfr. 6 rotundati, striati, ultimus amplissimus, obsolete costato-earinatus; sutura profunda; apertura magna, rotundata, fauce livida; labrum modice reflexum, albidum, prope columellam latius, umbilicum rimatum tegens. Lat. $1\frac{1}{10}$, alt. $\frac{1}{5}$, apert. $\frac{3}{5}$ poll. (G.)

Helix gulosa Gould 1846. Exped. shells p. 17.

Habitat in Nova Hollandia (New South Wales).

Obs. «Altitudine anfractus ultimi insignis. Forma H. californianae, textura H. albolabris, color H. badiae.»

891. *H. arbustorum* Linn.

T. subobtecte perforata, depresso-globosa, tenuis, concentricae minutissime striata, longitudinaliter, praesertim ad suturam, ruguloso-striatula, fusea, stramineo conspersa, plerumque rufo-unifasciata; spira magis minusve elevata; anfr. 6 convexi, ultimus antice vix descens; apertura lunato-rotundata; perist. eandide labiatum, margine supero expanso, basali reflexo, ad umbilicum dilatato. — Diam. maj. 24, min. 20, alt. 16 mill. (Coll. Nr. 538. Spec. typ.)

Helix arbustorum L. syst. ed. X. p. 774. N. 596. ed. XII. p. 1245.

Habitat in insula Ceylon, in Malabar, Coromandel.

896. **H. deflexa Pfr.**

T. anguste umbilicata, depresso-globosa, solidiuscula, oblique striata, albida, fusco obsolete cingulata et maculata; spira brevis; anfr. $4\frac{1}{2}$ planiusculi, ultimus antice valde deflexus, basi planulatus; apertura lunato-ovalis, coarctata; perist. expansum, marginibus approximatis, callo junctis, columellari intus recto, acuto, dilatato, excavato, perforationem angustam fere tegente. — Diam. maj. 22, min. $18\frac{1}{3}$, alt. 13 mill. (Coll. Nr. 543.)

Helix deflexa Pfr. in Zeitschr. f. Malak. 1845. p. 153.

— — *Chemn.* ed. II. *Helix* N. 340. t. 60. f. 21. 22.

Habitat in insula Cuba (Petit de la Saussaie).

897. **H. columbiana** Lea.

T. umbilicata, globoso-depressa, tenuis, luteo-cornea, striata, pilis brevibus, rigidis obsita; spira elevatiuscula; anfr. 6 convexi, ultimus antice vix deflexus, ad aperturam constrictus; apertura rotundato-lunaris; perist. late expansum, intus albo-callosum, margine columellari brevi, subverticali, dilatato, reflexo, umbilicum angustum fere occultante, basali strictiusculo. — Diam. maj. 47, min. 44, alt. 44 mill. (Coll. Nr. 544.)

Helix columbiana Lea obs. II. p. 89. t. 23. f. 73.

— — Chemn. ed. II. Helix N. 334. t. 58. f. 10—12.

Habitat in America boreali: Fort Vancouver (Lea), California, Nootka Sund (Hinds).

Obs. Variat magnitudine. Specim. minorum diam. maj. 45, min. 42½, alt. 9 mill.

897^a. **H. labiosa** Gould. †

T. depresso-conica, subtus convexa, arcte umbilicata, luteo-cornea, pilis sericeis quincuncialiter dispositis undique villosa; anfr. 6 convexi, ultimus immodice crescens et pone labrum valde contractus; apertura angusta, lunata; labrum album, late revolutum; faux livida. — Lat. 7/10, alt. 4/10 poll. (G.)

Helix labiosa Gould 1846. Exped. shells p. 16.

Habitat ad Astoria, Oregon.

Obs. Ab auctore comparatur cum *H. palliata*, nec non cum *H. columbiana* Lea, illi incognita. Hanc eandem speciem esse suspicor.

* * *

898. **H. desertorum** Forskal.

T. subobtecte umbilicata, subglobosa, depressiuscula, longitudinaliter striata aut laeviuscula, varie colorata et zonata; anfr. 4½ convexiusculi; apertura angulata (margine columellari in angulum descendente); faux fusca; perist. simplex vel reflexum. — Dimens. variab., plerumque diam. maj. 30, min. 26, alt. 20 mill. (Coll. Nr. 545.)

Tridopsis thyroides Beck ind. p. 23.

Lister t. 94. f. 94.

β? Dente in pariete aperturali nullo: diam. maj. 18, min. 16, alt. 12 mill. (Spec.)

Helix thyroides var. Fér. hist. t. 50 A. f. 6.

Habitat in America boreali: Ohio, Missouri, Carolina, etc.

Obs. Var. β (?) a pluribus auctoribus pro *H. Mitchelliana* Lea habetur, et sub hoc nomine ex America mittitur; sed haec imperforata dicitur. (Conf. Nr. 760.)

901. *H. trizonalis* Grateloup. †

T. crassiuscula, orbiculato-convexa, subglobosa, perforata, eleganter sulcato-plicatula, supra fulvo-zonata, infra candida, plicis longitudinalibus obliquis symmetrice dispositis; anfr. 4 — 5 convexi, ultimus trizonatus, postice eieatosus; apertura oblique ovata, intus bidentata; perist. subcontinuum, margine albo, subreflexo; columella incrassata. — Alt. 14 — 15, diam. 20 mill. (Gr.)

Helix trizonalis Grat. in Act. Bord. XI. p. 404. t. 1. f. 8.

Habitat in insula Cuba (Laterrade).

902. **H. porcellana Grateloup. †**

T. orbiculato-depressa, umbilicata, nitidissima, diaphana, supra flavicans, subtus candida; spira retusa; anfr. 5 convexi, ultimus basi convexus, superne fasciis 2 laete fulvescentibus ornatus; umbilicus excavatus; apertura subovata, basi fortiter bidentata, extus scrobiculata; labrum margine reflexum, album. — Alt. 9, diam. 15 mill. (Gr.)

Helix porcellana Grat. Bord. XI. p. 440. t. 1. f. 5. 6.

Habitat in insula Cuba.

§. 65.

903. **H. Pouzolzi Deshayes.**

T. aperte umbilicata, orbiculato-convexiuscula, striata, superne spiraliter lineata, olivaceo-fuscescens, fusco-trizona: zona media angusta; anfr. 6 planiusculi, ultimus antice dellexus; apertura late lunaris; perist. reflexum, incrassatum, albidum vel sordide carneum. — Diam. maj. 47, min. 40, alt. 24 mill. (Coll. Nr. 547.)

Helix Pouzolzi Desh. in Guér. mag. 1831. t. 30.

— . . . Fér. hist. t. 69 G. f. 3. 4.

Campylaea Pouzolzi Beck ind. p. 26.

β. Unifasciata.

γ. Unicolor:

Helix brenoensis Mühlf. Mus.

— *Pouzolzi* var. Chemn. l. c. t. 14. f. 3. 4.

— . . . Fér. hist. t. 69 G. f. 1. 2.

δ. Minor: diam. maj. 34, min. 29, alt. 20 mill.

Helix montenegrina Zgl.

— *macarana* Mühlf.

— *Pouzolzi* var. Rossm. VII. p. 15. f. 459.

Habitat in Dalmatia! Corsica? (*Pouzolzi*); var. β in Albania, δ in republica Montenegrina.

904. **H. Savignyana Ehrenberg. †**

T. late umbilicata, orbiculata, convexiuscula, transversim densius, longitudinaliter rarius subtilissime striata, olivacea

griseo-flavescente fasciata; labrum reflexum. — Lat. 21, alt. 11 lin. (E.)

Helix Savigniana Ehrenb. Symb. phys.

— *Pouzolzi* var.? (Beck.)

An Sav. descr. de l'Egypte t. 2. f. 20? (Ehr.)

Habitat ad lacum Mareotidem prope Alexandriam.

Obs. Cl. auctor speciem *H. algerae* et verticillo affinem dicit; ab his autem peristomate reflexo valde differt. Figura laudata Savigniana evidenter non ad hanc, sed ad *H. algeram* pertinet.

905. *H. Sadleriana* Ziegler.

T. late et aperte umbilicata, orbiculato-depressa, superne pilis brevissimis, rigidis dense obsita, tenuis, diaphana, lutescenti-cornea, rufo-unifasciata, in albida vitta utrinque fasciis dilutissimis terminata; anfr. 5 planulati; apertura rotundato-lunaris; perist. reflexum, albo-labiatum, marginibus distantibus. — Diam. maj. 30, min. 25, alt. 14 mill. (Coll. Nr. 548.)

Helix Sadleriana Zgl. Mus.

— — Rossm. VIII. p. 29. f. 502.

— — Chemn. ed. II. *Helix* N. 109. t. 18. f. 23. 24.

Habitat in Croatia, prope Fiumel

Obs. 1. Simillima *H. planospirae*. Differt testa pilosa, spira elatiore et peristomatis margine supero magis areuato.

Obs. 2. Huic persimilis *H. Raspailii* Payr., ob umbilicum plane consolidatum alio loco quaerenda. (Conf. Nr. 739.)

906. *H. planospira* Lamarck.

T. aperte umbilicata, orbiculato-depressa, nuda, nitida, cornea, in albida vitta rufo-unifasciata, superius fascia altera rufa, diluta; anfr. 5½ planulati, ultimus antice breviter deflexus; apertura rotundato-lunaris; perist. reflexum, albo-labiatum, marginibus remotis. — Diam. maj. 30, min. 25, alt. 13 mill. (Coll. Nr. 549.)

Helix planospira Lam. 48. p. 78. ed. Dh. p. 48.

— — Chemn. ed. II. Helix N. 477. t. 79. f. 17. 18.

— *Feburiana* var. Cantr. Malac. p. 114.

Campylaea hirta Beck ind. p. 26.

Corneola hirta Held in Isis 1837. p. 912.

Habitat in Illyria et Croatia. (Prope Fiume ipse legi!)

910. **H. diluta Pfr.**

T. umbilicata, depressa, orbicularis, tenuis, pellucida, flavo-cornea, fasciis 3 ornata: media saturate rufa, supera et infera latiore dilutis; anfr. 4 planiusculi; umbilicus angustus, pervius; apertura perobliqua, lunaris; perist. simplex, margine columellari expanso, carneo. — Diam. maj. 22, min. $17\frac{1}{2}$, alt. 11 mill. (Coll. Nr. 553.)

Helix diluta Pfr. Symb. II. p. 27.

— — Phil. Icon. I. 4. p. 80. t. 4. f. 11.

— — Chemn. ed. II. Helix N. 484. t. 80. f. 7. 8.

Habitat in Peruvia: Cusco. (Mus. Paris.)

911. **H. pyrenaica Draparnaud.**

T. anguste umbilicata, orbiculato-depressa, superne planiuscula, tenuis, pellucida, olivaceo-cornea; anfr. 5 subplanulati, ultimus non descendens; apertura lunaris; perist. acutum, reflexum, candido-labiatum, margine columellari dilatato. — Diam. maj. 19, min. 16, alt. 8—9 mill. (Coll. Nr. 554.)

Helix pyrenaica Drap. p. 111. t. 13. f. 7.

— — (Helicella) Fér. pr. 170. Hist. t. 69. f. 5.

— — Lam. ed. Dh. 124. p. 85.

— — Rossm. IV. p. 2. f. 218.

— — Chemn. ed. II. Helix N. 106. t. 18. f. 21. 22. t. 19. f. 16. 17.

Campylaea pyrenaica Beck ind. p. 26.

Corneola pyrenaica Held in Isis 1837. p. 912.

Habitat in montibus Pyrenacis.

912. *H. pyrrhizona* Philippi.

T. umbilicata, depressa, tenuis, subdiaphana, corneo-albida, superne confertim costulato-striata, basi tenuiter striata; spira parum elevata, apice non obtusata; anfr. $5\frac{1}{2}$ convexiusculi, ultimus ad peripheriam rufo-unizonatus, teretiusculus, antice vix descendens; umbilicus mediocris, pervius; apertura subverticalis, lunaris; perist. vix expansiusculum, intus labio crasso, albo, marginem non attingente, ad basin tuberculum indistinctum formante, munitum. — Diam. maj. 14, min. 13, alt. 8 mill. (Coll. Nr. 555.)

Helix pyrrhizona Phil. Icon. II. 9. p. 2. Helix t. 6. f. 4.

— — Chemn. ed. II. Helix N. 478. t. 79. f. 7—9.

Habitat in China (Largilliert).

913. *H. frigida* Jan.

T. aperte umbilicata, orbiculato-depressa, planospira, solida, cinereo-albida; anfr. 5 convexi, ultimus circa umbilicum medio-crem subcompressus, antice vix descendens; apertura rotundato-lunaris, intus fuscula; perist. albo-labiatum, marginibus distantibus, columellari reflexiusculo. — Diam. maj. 21, min. 19, alt. 9 mill. (Coll. Nr. 556.)

Helix frigida Crist. et Jan. catal. Mantissa p. 2.

— — Rossm. III. p. 5. f. 157.

— . . . Fér. hist. t. 69 F. f. 19. 20.

Campylaea Fontenillii Beck ind. p. 25.

Habitat in Gallia. (Grande Chartreuse, Isère: Mich.)

— 915. **H. carascalensis Férussac.**

T. anguste umbilieata, globoso-depressa, striata, lutescens, corneo-variegata et subfasciolata; spira convexiuscula; anfr. $5\frac{1}{2}$ convexiusculi; apertura transverse rotundato-lunaris; perist. patulum, acutum, intus leviter labiatum, margine columellari late reflexo. — Diam. maj. 15, min. 13, alt. $8\frac{1}{2}$ mill. (Coll. Nr. 558.)

Helix carascalensis (Helicella) Fér. pr. 158. Hist. t. 67. f. 4.

— — Mich. compl. p. 29. t. 14. f. 23.

— — Lam. ed. Dh. 120. p. 83.

— — Rossm. IX. p. 7. f. 570.

— — Chemn. ed. II. Helix N. 497. t. 82. f. 4—3.

Campylaea carascalensis Beck ind. p. 24.

Habitat in Arragonia (Fér.), Pyrenaeis (Mieh.).

916. **H. virgulata Sowerby. †**

T. mediocriter umbilieata, suborbicularis, depressiuscula, lineis incrementi subprofunde striata, lacte brunnea, leviter carinata, ad carinam castaneo-cingulata; spira subconica; anfr. 3 convexiusculi; apertura lata, lunaris, intus brunneo-fasciata; perist. intus incrassatum, leviter patulum. — Diam. maj. 19, alt. 12 mill. (ex ic.)

Helix virgulata Sow. in Zool. of Beech. voy. p. 144. t. 38. f. 9.

Habitat . . . ?

§. 66.

— 917. **H. campesina Ezquerria.**

T. umbilieata, subgloboso-depressa, striis incrementi distinctis et lineis profunde impressis spiralibus confertim reticulata, griseo-carnea, fusco obsolete fasciata et maculata; spira brevis, obtusa; anfr. $4\frac{1}{2}$ vix convexiusculi, ultimus inflatus, antice subito deflexus, basi juxta umbilicem mediocrem non pervium subcompressus; apertura perobliqua, lunato-ovalis; perist. acutum, intus sublabiatum, marginibus approximatis, supero expanso, basali valde reflexo, columellari dilatato, patente, umbilicem semioecultante. — Diam. maj. 39, min. 32, alt. 19 mill. (Coll. Nr. 559.)

Helix campesina Ezq. (teste Bronn catal. 1845.)

— — Pfr. Symb. III. p. 76.

— — Chemn. ed. II. Helix N. 444. t. 49. f. 14. 15.

Habitat in Hispania.

Obs. Habitu persimilis H. alonensi Fér. (Conf. Nr. 744.) Differt umbilico aperto, sculptura distinctiore, apertura magis deflexa, peristomatis marginibus valde approximatis, basali angulatum reflexo, libero. — Similis H. spiriplanae Oliv. (Nr. 954.), sculptura, marginibus non junctis etc. diversa.

— 918. **H. Hoffmanni Partsch.**

T. subobteete umbilicata, depresso-globosa, tenera, hispida, lutescens, uni-vel obsolete trifasciata; anfr. 5 convexiusculi, ultimus antice valde deflexus; apertura perobliqua, rotundato-ovalis; perist. latum, reflexum, sublabiatum, marginibus conniventibus, basali dilatato, calloso. — Diam. maj. 34, min. 26, alt. 48 mill. (Coll. Nr. 560.)

Helix Hoffmanni Partsch in Mus. Caes. Vindob.

— — Rossm. IV. p. 4. f. 224.

— — Chemn. ed. II. *Helix* N. 487. t. 80. f. 5. 6.

— *monozona* Zgl. Mus.

Campylaea Hoffmanni Beck ind. p. 26.

Corneola Hoffmanni Held in Isis 1837. p. 942.

Habitat circa Cattaro Dalmatiae.

— 919. **H. insolida Ziegler.**

T. umbilicata, globoso-depressa, nuda, corneo-lutescens, anguste 3-fasciata, striata; anfr. 5 convexi, ultimus antice subito deflexus; apertura obliqua, transverse ovalis; perist. reflexum, sublabiatum, marginibus conniventibus, subconnexis, columellari basi dilatato, tuberculifero. — Diam. maj. 32, min. 26, alt. 47 mill. (Coll. Nr. 564.)

Helix insolida Zgl. Mus. Rossm. VIII. p. 34. f. 506.

— — Chemn. ed. II. *Helix* N. 475. t. 79. f. 24—23.

— *praetextata* Parr.

Habitat in Albania.

Obs. Differt ab *H. Hoffmanni* testa nuda, umbilico latiore, tuberculo marginis basalis aperturae exquisito.

— 920. **H. trizona Ziegler.**

T. umbilicata, orbiculato-convexiuscula, lutescenti-albida, castaneo-trizonata; anfr. 5 — 5½ subplanulati, ultimus antice deflexus; apertura perobliqua, rotundato-ovalis; perist. subsimplex, marginibus conniventibus, supero expanso, basali reflexo, columellari dilatato. — Diam. maj. 30, min. 26, alt. 45 mill. (Coll. Nr. 562.)

Helix trizona Zgl. Mus. Rossm. II. p. 4. f. 87.

— — Desh. in Fér. hist. p. 23.

— *tricincta* Mf. Mus.

Campylaea trizona Beck ind. p. 25.

Cingulifera trizona Held in Isis 1837. p. 944.

β . Minor, arctius spirata: diam. maj. 22, min. 19, alt. 11 mill. (Spec.)

Helix rumelica Zgl. Mus. Rossm. VIII. p. 30. f. 504.

— *rhodopea* et *Sanderiana* Friv.

— *trizona* var. Chemn. ed. II. Helix t. 79. f. 13. 14.

Habitat in alpinis Mehadiae Banatus, var. β in Rumelia.

921. *H. trigrammephora* Orbigny.

T. umbilicata, orbiculato-convexiuscula, striatula, nitida, flavo-albida, lineis 3 castaneis ornata; spira brevis, obtusa; anfr. 5 convexiusculi, ultimus antice descendens; apertura rotundato-lunaris; perist. subsimplex, album, marginibus conniventibus, supero expanso, basali reflexo, columellari dilatato, umbilicum mediocrem non occultante. — Diam. maj. 25, min. 24, alt. 13 mill. (Coll. Nr. 563.)

Helix trigrammephora (Cochlodon) Orb. synops. p. 22.

— — — Orb. voy. p. 242. t. 25. f. 9—11.

— — — Chemn. ed. II. Helix N. 473. t. 79. f. 1—4.

— . . . Fér. hist. t. 69 II. f. 11. 12.

Campylaea trigrammephora Beck ind. p. 27.

Habitat in Bolivia: Valle grande (Orb.).

Obs. Variat spira magis minusve elevata, nec non umbilico angustissimo, margine columellari semioblecto.

922. *H. Naxiana* Férussac.

T. umbilicata, depresso-globosa, oblique striata, fusca, albido-strigata et cingulo albo, rufo-marginato ornata; spira subelata; anfr. 5 planiusculi, ultimus antice deflexus, subconstrictus; umbilicus angustus, pervius; apertura lunato-circularis; perist. intus albo-labiatum, reflexum, marginibus approximatis. — Diam. maj. 14, min. 12, alt. 9 mill. (Mus. Cuming.)

Helix Naxiana Fér. pr. p. 68.

— — — Pfr. Symb. III. p. 77.

— *Naxientia* (Helicella) Fér. pr. 166. Hist. t. 69. f. 1.

β . Alba, cingulis 3 rufis: diam. maj. 18, min. 15½, alt. 11 mill. (Coll. Nr. 566.)

Helix Naxiana var. Chemn. ed. II. Helix N. 479. t. 79. f. 24. 25.

Habitat in insulis Naxos et Candia (Fér.), var. β prope Suda Candiae (Forbes).

923. *H. lecta* Férussac.

T. umbilicata, globoso-depressa, tenuis, oblique confertim costato-plicata, alba, unicolor vel fasciis 3 angustis, fuscis cingulata; anfr. 5 planiusculi, ultimus basi ventrosus, antice deflexus; umbilicus angustus, pervius; apertura perobliqua, subcircularis; perist. intus labiatum, album, undique breviter expansum, mar-

ginibus approximatis, callo junctis, columellari dilatato. — Diam. maj. 17, min. 15, alt. 10 mill. (Mus. Cuming. et Coll. Nr. 565. juv.)

Helix lecta (Helicella) Fér. pr. 167. Hist. t. 69. f. 2.

— — Pfr. Symb. III. p. 77.

— — Chemn. ed. H. Helix N. 447. t. 74. f. 4. 5.

Theba lecta Beck ind. p. 12.

Habitat in insula Candia (Oliv., Fér.), ins. Theodoro in sinu Khania Candiae (Forbes), var. unicolor prope Trapezuntum.

924. *H. pellita* Férussac.

T. perforata, orbiculato-convexa, subdepressa, fulvida, fascia alba utrinque rufo-marginata ornata, costulato-striata, pilis erectis, rigidis obsita; anfr. 5 convexiusculi, ultimus antice deflexus; apertura subcircularis, intus margaritacea; perist. acutum, intus albo-labiatum, marginibus approximatis, callo tenui junctis. — Diam. maj. 15, min. 14, alt. 9½ mill. (Coll. Nr. 566.)

Helix pellita (Helicella) Fér. pr. 168. Hist. t. 69. f. 3.

— — Chemn. ed. H. Helix N. 480. t. 74. f. 19. 20.

— *peltita* Lam. ed. Dh. 136. p. 91.

— — Roth diss. p. 15.

β. Minor: diam. maj. 13, min. 11, alt. 7½ mill. (Spec.)

Habitat in Morea (Dh.), ins. Rhodo (Oliv.), ins. Syra (Roth, Forbes).

* * *

925. *H. luhuana* Sowerby.

T. late umbilicata, suborbicularis, depressiuscula, lineis incrementi irregulariter rugulosa, brunnea; anfr. 6 planiusculi, ultimus rotundatus, supra medium fascia angusta nigricante cinctus, antice vix descendens, circa umbilicum infundibuliformem subcompressus; apertura lata, rotundato-lunaris; perist. intus subincrassatum, marginibus conniventibus, supero arcuato, expanso, basali breviter reflexo, columellari vix dilatato. — Diam. maj. 44, min. 35, alt. 20 mill. (Mus. Cuming.)

Helix luhuana Sow. Beech. voy. p. 440. t. 35. f. 4.

Habitat ad Loo-Choo.

O bs. Habitu persimilis H. Pouzolzi.

926. *H. Lefebvriana* Férussac.

T. umbilicata, orbiculato-depressa, planospira, tenera, pubescens, cinereo-cornea, unifasciata; anfr. 5 deplanati, ultimus antice deflexus; apertura perobliqua, rotundato-lunaris; perist. acutum, reflexum, albido-labiatum, marginibus conniventibus, curvatis. — Diam. maj. 29, min. 24, alt. 13 mill. (Coll. Nr. 567.)

Helix Lefebvriana (Helicella) Fér. pr. 171. Hist. t. 69. f. 6.

— *luganensis* Schintz. (teste Charp.)

Campylaea cingulata Beck ind. p. 25.

Cingulifera cingulata Held in Isis 1837. p. 911.

β. Unicolor, absque fascia:

Helix cingulata α Fér. hist. t. 68. f. 31

— — var. Rossm. VI. p. 39. f. 371.

γ. Minor: diam. maj. 24, min. 18, alt. 10 — 11 mill.

Helix cingulata var. Rossm. VI. f. 372.

δ. Major, marginibus subconnexis, umbilico latiore: diam. maj. 29, min. 24, alt. 13 mill.

Helix baldensis Villa disp. syst. p. 55.

— *cingulata* var. *baldensis* Rossm. X. p. 13. f. 603. 4.

ε. Lactea, bizona, fascia altera inferiore diluta, marginibus remotioribus, apertura rotundiore, minus obliqua: diam. maj. 24, min. 21, alt. 12 mill.

Helix cingulata var. *bizona* Rossm. XI. p. 1. f. 683.

ζ. Fusco-aspera, zona pallida: diam. et alt. sicut in α.

Helix colubrina Jan Mantissa p. 2.

— — Desh. in Fér. hist. p. 33. t. 69 F. f. 15—18.

— *striatula* O. Fabr. (teste Beck.)

— *cingulata* var. Rossm. VI. p. 39. f. 370.

Campylaea colubrina Beck ind. p. 25.

Habitat in Tyrolia, Illyria, var. δ in Monte Baldo, ε prope Nizza, ζ in Lombardia.

Obs. Etsi clari auctores *H. colubrinam* bonam speciem habeant, imo Cl. Porro (p. 30.) tres ejus varietates distinguat (sc. α nubilam Zgl., β fasciatam, γ albidam) characteres constantes praeter colorem eruere non potui.

— 929. **H. Schmidtii Ziegler.**

T. umbilicata, orbiculato-convexiuscula, solida, fusca, rugoso-striata, stramineo vel albido variegata; anfr. 5 — 5½ convexi, sensim accrescentes, ultimus anticè vix deflexus; umbilicus mediocris, pervius; apertura rotundato-lunaris, fauce fusca; perist. albo-labiatum, marginibus conniventibus, supèro vix expanso, basali breviter reflexo, columellari vix dilatato. — Diam. maj. 24, min. 21, alt. 12 mill. (Coll. Nr. 570.)

Helix Schmidtii Zgl. Mus. Rossm. III. p. 5. f. 156.

— — Chemn. ed. II. Helix N. 493. t. 81. f. 13 — 16.

— *colubrina* var. Desh. in *Fér.* hist. p. 33.

Campylaea Smithii Beck ind. p. 25.

Cingulifera Schmidtii Held in Isis 1837. p. 911.

Habitat in alpibus Carnioliae, ubi semper in Papavere alpino degentem detexit Cl. Schmidt.

— 930. **H. alpina Faure-Biguet.**

T. umbilicata, orbiculato-convexa, obsolete carinata, luteola, epidermide decidua fusculo-variegata, striata, lineis spiralibus subtilissimis undulatis sculpta; anfr. 5 convexi; apertura rotundato-lunaris; perist. simplex, albo-labiatum, margine supèro recto, basali breviter, columellari latius reflexo. — Diam. maj. 19, min. 16, alt. 10 mill. (Coll. Nr. 571.)

Helix alpina (Helicella) Faure-Big. *Fér.* pr. 160. Hist. t. 67. f. 3.

Campylaea alpina Beck ind. p. 24.

Cingulifera alpina Held in Isis 1837. p. 911.

β. Uzonata: diam. maj. 21, min. 18, alt. 11 mill. (Spec.)

Helix phalerata Zgl. Rossm. III. p. 6. f. 159.

— — Desh. in *Fér.* hist. p. 34. t. 69 E. f. 11. 18 — 22.

— *alpina* var. Chemn. ed. II. Helix t. 81. f. 9 — 12.

Cingulifera phalerata Held in Isis 1837. p. 911.

γ. Major, uzonata: diam. maj. 27, min. 24, alt. 14 mill. (Spec.)

Habitat in alpibus Galliae (Grande Chartreuse: Mich.), et Carinthiae (!) var. β et γ in alpibus Carinthiae et Carnioliae.

Obs. H. alpina et phalerata distingui non possunt; utraque variat spira magis minusve elevata et magnitudine. In connubio legi concolorem et phaleratam in cacumine montis Ovir prope Klagenfurt. (Conf. Pfr. in Wiegman. Arch. 1844. I. p. 220.)

— 931. **H. Preslii Schmidt.**

T. late umbilicata, suborbiculata, superne planiuscula, striata, cinereo-carnea, supra fusculo-variegata, dilutè subtrifasciata; anfr. 5 planulati, ultimus antee deflexus; apertura perobliqua, subcircularis; perist. reflexum, sublabiolum, marginibus conniventibus. — Diam. maj. 27, min. 22, alt. 40 mill. (Coll. Nr. 572.)

Helix Preslii Schmidt. Rossm. IV. p. 4. f. 225.

— — Chemn. ed. II. Helix N. 490. t. 81. f. 3. 4.

— *strigata* var. Cantr. Malac. p. 444.

— *insubrica* Desh. in Fér. hist. p. 30. *) (exclus. icon.)

Cingulifera Preslii Held in Isis 1837. p. 944.

β. Fascia media distincta, lateralibus in variegationem latam maculosam dissolutis:

Helix Preslii var. *nisoria* Rossm. VIII p. 32. f. 509.

γ. Fasciis 3 dilutis nullis, marginibus aperturæ approximatis:

Helix Preslii var. *Phil.* Sicil. II. p. 444.

Habitat in alpinis Carnioliae (Schmidt), β in Lombardia et Turcia (Friv.), γ circa Piedimonte d'Alife (Seacchi, Phil.).

Obs. 1. Ab *H. cingulata* semper differt spira plaua, anfractibus lentius accrescentibus, marginibus peristomatibus minus approximatis et striis confertioribus atque subtilioribus.

Obs. 2. Figuræ Fér. t. 69 f. f. 4—5, a Deshayesio ad *H. insubricam* editæ, *H. setipilam* exhibent; fig. Fér. t. 68. f. 3, a Deshayesio ad *setipilam* edita, est *H. cingulata* var. unicolor.

— 932. **H. tigrina Jan.**

T. late umbilicata, suborbiculata, superne planiuscula, sericina, subtiliter striata, subtus convexa, fusculo albidoque variegata; anfr. 5 planiusculi, ultimus carinatus, antee subito deflexus; apertura subcircularis; perist. intus sublabiolum, marginibus conniventibus, supero simpli, basali reflexo. — Diam. maj. 23, min. 20, alt. 9½ mill. (Coll. Nr. 573.)

Helix tigrina Crist. et Jan. catal. Mant. p. 2.

— — Rossm. IV. p. 4. f. 226.

— — Desh. in Fér. hist. p. 37. t. 69 J. f. 44—47.

— — Chemn. ed. II. Helix N. 499. t. 82. f. 9. 10.

— *strigata* var. Cantr. Malac. p. 444.

Campylaea tigrina Beck ind. p. 25.

Cingulifera tigrina Held in Isis 1837. p. 944.

Habitat in alpinis Lombardiae.

*) T. late umbilicata, orbiculato-depressa, albo-grisea pallide fusco-guttata, obscure angulata; anfract. subplanis, tenue et irregulariter striatis; apertura perobliqua, ovata; perist. albo, reflexo, marginibus subapproximatis. — Diam. 22, alt. 40 mill. (Desh. l. c.) — Conf. descriptio accuratior.

933. **H. zonata Studer.**

T. umbilicata, orbiculato-convexa, olivacea, subpellucida, fusco-unifasciata; anfr. $5\frac{1}{2}$ convexiusculi, ultimus antice descendens; apertura lunato-ovalis; perist. simplex, marginibus subconniventibus, supero expanso, basali reflexo, columellari dilatato. — Diam. maj. 21, min. 18, alt. 11 mill. (Coll. Nr. 574.)

Helix squamatina Fér. Mus.

— cornea Fér. hist. t. 67. f. 4.

— — var. Rossm. IV. p. 2. f. 219.

— — var. Chemn. l. c. t. 18. f. 11. 12.

γ . Concolor, virescenti-cornea; marginibus subconnexis:

Helix Desmoulinsii Farin. Ann. sc. nat. 1834. II. p. 121.

— — Fér. in Bull. zool. 1835. p. 41.

— *Moulinsii* Pot. et Mich. gal. I. p. 81.

— cornea var. Rossm. VIII. p. 33. f. 511.

Habitat in montosis Germaniae et Galliae meridionalis et Italiae borealis, var. γ in montibus « Albères » (Desmoul.).

Obs. An eadem: *Helicigona cornea* Risso IV. p. 66? (Conf. Nr. 1102.)

936. **H. Rossmässleri Pfr. †**

T. perforata, globoso-depressa, tenera, supra lutea, rufo-unifasciata, subtus fuscescens; anfr. $4\frac{1}{2}$ convexiusculi; apertura rotundato-lunaris; perist. reflexum, tenue, marginibus distantibus. — Alt. $3\frac{1}{2}$, long. $5\frac{1}{2}$ lin. (Rm.) Diam. maj. 12, min. $10\frac{1}{2}$, alt. $6\frac{1}{2}$ mill. (ex ic.)

Helix Rossmässleri Pfr. Symb. II. p. 98.

— advena Rossm. XI. p. 2. f. 687. Nec Webb et Berth.

Habitat in montibus Carpathis, ubi legit Frivaldsky.

Obs. « Similis H. faustinae; differt magnitudine, umbilico angusto et peristomate acuto absque labio ». (Rm.) — An huc referenda?

937. *H. Narzanensis* Krynicki. †

T. orbiculato-depressiuscula, tenuis, pellucida, transversim obsolete, longitudinaliter obsolete striata, albescenti-unicolor aut fasciis 2, supera fusca, infera alba per medium excurrentibus notata; anfr. 6 rotundato-convexi; suturae profundiusculae; spira prominula; umbilicus mediocris, profundus; apertura rotundato-lunata; perist. intus marginatum, reflexum, extremitatibus remotis. — Diam. 8, alt. $4\frac{1}{2}$ ''' (Kryn.)

Helix Narzanensis Kryn. in Bull. Mosc. IX. p. 172.

Habitat in Caucaso, ad balnea Narzanensia.

Obs. «Simillima *H. faustinae*, differt ab illa superficie longitudinaliter striata, apertura magis regulari, lunata, peristomate in adultis intus incrassato, et umbilico minus aperto».

938. *H. pratensis* Pfr.

T. umbilicata, orbiculato-convexa, ruguloso-striata, albida, fasciis 2 castaneis cincta; spira subelevata; anfr. 6 convexusculi, ultimus antice vix descendens; umbilicus mediocris, pervius; apertura rotundato-lunaris; perist. expansum, intus remote albo-labiatur, marginibus conniventibus, columellari subdilatato, patente. — Diam. maj. 17, min. 14, alt. $9\frac{1}{2}$ mill. (Coll. Nr. 577.)

Helix pratensis Pfr. in Proc. Zool. Soc. 1845. p. 132.

— — Chemn. ed. II. *Helix* N. 98. t. 17. f. 47—49.

β. Absque fasciis, anfractu ultimo fuscescenti-carneo.

Habitat ad fluvium Tortoom Rossiae asiat. in pratis humidis, Kasbeck (Krauss).

Obs. Nonne forsā varietas praecedentis, cujus descriptio nuperrime tandem mihi innotuit?

939. *H. Eichwaldi* Pfr.

T. umbilicata, depressa, ruguloso-striata, nitida, albida, punctis corneis conspersa et corneo-bifasciata; spira planiuscula; anfr. 6 vix convexusculi, ultimus antice deflexus; umbilicus latiusculus, pervius; apertura perobliqua, fere circularis; perist. expansum, intus remote et prominenter albo-labiatur, marginibus acutis fere contiguis. — Diam. maj. 18, min. 15, alt. 8 mill. (Coll. Nr. 578.)

Helix Eichwaldi Pfr. Symb. III. p. 77.

— — Chemn. ed. II. *Helix* N. 99. t. 17. f. 20—22.

Habitat in Caucaso.

940. *H. cingulella* Ziegler.

T. late umbilicata, depressa, tenuiuscula, striata, nitidula, sordide alba, livido-radiata, linea 4 fusca supra peripheriam

cincta; spira subplana; anfr. 5 depressi, ultimus superne obsolete angulatus, antice breviter descendens; apertura perobliqua, transverse ovali-subcircularis; perist. subsimplex, tenue, expansiusculum, marginibus approximatis, columellari subdilatato-patente. — Diam. maj. 46, min. 43½, alt. 7 mill. (Mus. Gruer.)

Helix cingulella Zgl. Mus. Rossm. VI. p. 40. f. 373.

— — Desh. in *Fér.* hist. p. 34. t. 69 J. f. 4—4.

— — Chemn. ed. II. *Helix* N. 498. t. 82. f. 6—8.

Cingulifera cingulella Held in *Isis* 1837. p. 911.

Habitat in alpinis Volhyniae, ubi detexit Zawadzky.

941. *H. intermedia* Férussac.

T. aperte umbilicata, depressa, suborbiculata, striata, lutescenti-albida, unicolor vel rufo-trifasciata: fasciis lateralibus interruptis; anfr. 5 planiusculi, ultimus antice deflexus; apertura subhorizontalis, ovato-rotunda; perist. reflexum, marginibus fere contiguis, basali introrsum dilatato. — Diam. maj. 46, min. 44, alt. 7 mill. (Coll. Nr. 579.)

Helix intermedia (Helicella) Fér. pr. 163. Hist. t. 68. f. 4. 2.

— *umbrica* Charpent.

Campylaea strigata Beck ind. p. 24.

Cingulifera strigata Held in Isis 1837. p. 911.

β. Paulo latius umbilicata, apertura magis rotundata:

Helix glabrata Zgl. Mus.

— *strigata* var. Rossm. IV. f. 228.

γ. Umbilico majore, superne acutius costulata, marginibus peristomatis approximatis: diam. maj. 20, min. $16\frac{1}{2}$, alt. $9\frac{1}{2}$ mill. (Spec.)

Helix corrugata Zgl. Mus.

— *strigata* β Fér. hist. t. 67. f. 8?

— — var. Rossm. IV. f. 229.

— — var. Chemn. ed. II. *Helix* t. 18. f. 21. 22.

Cingulifera corrugata Held in Isis 1837. p. 911.

δ. Fusco-labiata: Rossm. XI. p. 2. f. 684.

Habitat in Italia et Sicilia, var. δ prope Sorrentum, Capri, Paestum (Phil.).

943. *H. Ziegleri* Schmidt.

T. late umbilicata, depressa, suborbiculata, obtuse subcarinata, albedo-caesia, interrupte subtrifasciata, superne costulato-plicata; anfr. 5 planiusculi, ultimus antice subito deflexus; apertura subcircularis; perist. labiatum, marginibus fere connexis, supero expanso, basali strictiusculo, reflexo. — Diam. maj. 20, min. 18, alt. $7\frac{1}{2}$ mill. (Coll. Nr. 581.)

Helix Ziegleri Schmidt. Rossm. III. p. 4. f. 154.

— — Desh. in Fér. hist. p. 35. t. 69 J. f. 10—13.

— — Chemn. ed. II. *Helix* N. 494. t. 81. f. 17—19.

— *strigata* var. Cantr. Malac. p. 111.

Campylaea Ziegleri Beck ind. p. 24.

Cingulifera Ziegleri Held in Isis 1837. p. 911.

Habitat in alpibus Carnioliae, ubi praecipue in Paederota lutea degentem detexit Cl. Schmidt Labacensis.

944. *H. armeniaca* Pfr.

T. umbilicata, orbiculato-convexiuscula, valide plicato-striata, corneo et cinerascanti-albido variegata; spira brevissime conoidea; anfr. 6 depressi, ultimus angulatus, breviter deflexus; umbilicus mediocris, pervius; apertura perobliqua, subcircularis; perist. remote et prominule albo-labiatum, marginibus approximatis, supero recto, basali breviter reflexo. — Diam. maj. 41, min. 40, alt. $5\frac{1}{2}$ mill. (Coll. Nr. 582.)

Helix armeniaca Pfr. Symb. III. p. 77.

Helix armeniaca Chemn. ed. II. Helix N. 100. t. 17. f. 23—25.

— *Ziegleri* var. *Airunia* Siemaschko.

Habitat prope Bogasdach Armeniac; Airum in Caucaso (Dr. Siemaschko in Coll. Rossm.).

945. **H. glacialis** Thomas.

T. umbilicata, orbiculato-convexiuscula, apice obtusa, leviter carinata, lutescens, sordide variegata, superne plicato-striata, subtilissime spiraliter lineata, rufo-unifasciata; anfr. 5 convexiusculi, ultimus vix deflexus; umbilicus mediocris, pervius; apertura lunato-rotundata; perist. leviter albo-labiatus, margine supero vix expanso, basali breviter reflexo. — Diam. maj. 13, min. 11½, alt. 6½ mill. (Coll. Nr. 583.)

Helix glacialis Thom. Fér. pr. 159. Hist. t. 67. f. 2.

— — Rossm. VIII. p. 31. f. 507.

— — Desh. in Fér. hist. p. 40.

— — Chemn. ed. II. Helix N. 101. t. 17. f. 26—28. t. 18. f. 1. 2.

Campylaea glacialis Beck ind. p. 24.

Habitat in alpinis Pedemontanis.

946. **H. asperella** Pfr.

T. umbilicata, depressa, granulis minutis undique exasperata, sordide albida, fasciis rufis varie cingulata; spira vix elevata; anfr. 4 planiusculi, ultimus basi convexus, antice parum descendens, juxta umbilicum mediocrem, infundibuliformem subcompressus; apertura obliqua, lata, subcircularis; perist. undique expansum, marginibus approximatis, callo tenui junctis. — Diam. maj. 14, min. 11, alt. 6½ mill. (Coll. Nr. 584.)

Helix asperella Pfr. Symb. III. p. 78.

— — Chemn. ed. II. Helix N. 504. t. 32. f. 22—25.

— *granifera* Bens. in Mus. Cuming. — Nec Gray.

β. Duplo minor.

Habitat in India orientali, prope Bithonia in ripa Gangis (Bens.).

947. **H. Tuckeri** Pfr.

T. umbilicata, depressa, tenuis, pellucida, oblique striata, breviter et sparsim pilosa, fusco-cornea, rufo obsolete unicingulata; spira vix elata; anfr. 4 planiusculi, ultimus antice gibbus, constrictus, subito deflexus; umbilicus angustus, pervius; apertura perobliqua, subcircularis; perist. intus albidum, undique breviter reflexum, marginibus approximatis. — Diam. maj. 7, min. 6, alt. 3½ mill. (Coll. Nr. 585.)

Helix Tuckeri Pfr. Symb. III. p. 77.

Helix Tuckeri Chemn. ed. II. *Helix* N. 484. t. 79. f. 40—42.

Habitat in « Charles Hardy's island » oceani pacifici (Tucker).

Obs. Conf. *H. cyclostomata* Le Guill. (Nr. 985.)

948. *H. martigena* Férussac.

T. umbilicata, depressa, sublaevigata, flavescenti-albida; spira brevissime conoidea; anfr. 4 vix convexi, ultimus antice descendens; umbilicus angustus, pervius; apertura lunato-rotundata; perist. album, expansum, marginibus conniventibus, columellari dilatato, reflexo. — Diam. maj. $7\frac{1}{2}$, min. 6 mill. (ex ic.)

Helix martigena (Helicella) Fér. pr. 469. Hist. t. 69. f. 4.

Ochtheplula martigena Beck ind. p. 47.

Habitat in Andalusia: in campo proclii Atalatae (Fér.).

949. *H. pulchella* Müller.

T. umbilicata, subdepressa, albida, nitida, glabra; anfr. $3\frac{1}{2}$ convexusculi, ultimus antice dilatatus, non deflexus; apertura obliqua, subcircularis; perist. reflexum, candide sublabiatum, marginibus approximatis. — Diam. maj. 3, min. $2\frac{1}{2}$, alt. $4\frac{1}{2}$ mill. (Coll. Nr. 586.)

Turbo helycinus Lightf. Phil. tr. 77. p. 167. t. 3. f. 1. 4.

Circinaria pulchella β Beck ind. p. 23.

Habitat in Europae mediae terris plerisque, nec non in Russia, Caucaso.

Obs. 1. E characteribus allatis, inprimis ex formatione anfractus ultimi, quam in permultis speciminibus constantem observavi, praeter sculpturam, hanc speciem eum praecedente conjungendam esse non arbitror.

Obs. 2. Characteribus generalibus huic sectioni affinis *H. chinensis* Nr. 4053.

§. 67.

— 951. **H. spiriplana Olivier.**

T. umbilicata, suborbiculato-depressa, oblique sulcato-plicata, olivaceo-lutescens, albido-subflammulata, maculoso-subfasciata; anfr. 5, supremi planulati, carinati, ultimus rotundatus, antice subito deflexus; apertura perobliqua, transverse ovalis; perist. albo-labiatum, marginibus subcontiguis, callo elevato junctis, supero expanso, basali reflexo, columellari dilatato, umbilicum semitegente. — Diam. maj. 36, min. 30, alt. 19 mill. (Coll. Nr. 588.)

Helix spiriplana Oliv. voy. I. p. 415. t. 17. f. 7.

— — Roth diss. p. 12. t. 1. f. 10—14.

— — Rossm. XI. p. 1. f. 682.

— — Chemn. ed. II. Helix N. 112. t. 19. f. 12. 13.

Habitat in insulis Creta et Rhodo (Oliv.), in montibus Idumaeis, prope Hierosolymam frequens (Roth).

Obs. *H. spiriplana* Fér., Aud., Desh., Rossm. VI. f. 369 non est species Olivieriana, sed potius *H. Codringtoni* (Conf. Nr. 710.)

✓ 952. **H. denudata** Rossmässler.

T. aperte umbilicata, turbinato-depressa, nuda, lutescens, fusco-trifasciata; anfr. 6 convexiusculi, ultimus antice subito deflexus; apertura perobliqua, rotundata; perist. continuum, solutum, reflexum, margine basali subunidentato. — Diam. maj. 29, min. 25, alt. 16 mill. (Coll. Nr. 589.)

Helix denudata Rossm. IV. p. 3. f. 223.

— *setosa* var. Cantr. Malac. p. 115.

Corneola denudata Held in Isis 1837. p. 912.

Habitat prope Macarsca Dalmatiae.

Obs. Differt ab *H. setosa* Zgl. spira elatiore, epidermide nuda, nitida, anfractibus arctius spiratis.

✓ 953. **H. setosa** Ziegler.

T. aperte umbilicata, orbiculato-depressa, villosa, tenera, striata, lutescenti-cornea, pallide subtrifasciata; anfr. 5 convexiusculi, ultimus antice deflexus; apertura perobliqua, rotundata; perist. continuum, solutum, latum, reflexum, sublabiatum, margine basali subdentato. — Diam. maj. 30, min. 26, alt. 15 mill. (Coll. Nr. 590.)

Helix setosa Zgl. Rossm. IV. p. 3. f. 222.

Helix Portosanctana var. Lowe l. c. t. 5. f. 16.

— *Lowii* Fér. in Bull. zool. 1835. p. 89.

Habitat in insula Portosancto.

955. *H. cyclolabris* Deshayes.

T. umbilicata, depressa, striatula, obsolete granulata et sparse pilosa, albo-lutescens, fusco-unifasciata; anfr. $4\frac{1}{2}$ planulati, ultimus antice subito deflexus; apertura subcircularis; perist. sublabiatum, continuum, non solutum, margine supero late expanso, basali reflexo. — Diam. maj. 19, min. 15, alt. 9 mill. (Coll. Nr. 592.)

Helix cyclolabris Desh. in Fér. hist. p. 32.*)

— — Chemn. ed. II. Helix N. 476. t. 79. f. 15. 16.

— *zonata* *β* Fér. hist. t. 68. f. 7.

— *Heldreichii* Shuttl. in sched. Cuming.

— — Pfr. Symb. III. p. 78.

Habitat in Morea et insula Naxos (Desh.), Attica (Shuttleworth).

956. *H. ruginosa* Férussac.

T. umbilicata, depressa, plicis validis, obliquis ruginosa, albida, lineis nonnullis rufis cincta; spira vix elevata; anfr. 4 plani, ultimus superne planus, ad peripheriam subangulatus, basi inflatus, antice breviter deflexus; umbilicus mediocris, pervius; apertura subhorizontalis, lunato-ovalis; perist. tenue, album, marginibus junctis, supero breviter expanso, columellari strictiusculo, reflexo. — Diam. maj. 13, min. 11, alt. $6\frac{1}{2}$ mill. (Mus. Brit.)

Helix ruginosa (Helicella) Fér. pr. 180. Hist. t. 71. f. 4.

— — Desh. in Fér. hist. p. 38.

— — Chemn. ed. II. Helix N. 456. t. 76. f. 7—10.

Habitat in Bengalía (Leschenault, Fér.).

957. *H. fallaciosa* Férussac.

T. umbilicata, depressa, alba, unicolor vel zonis fuscis variis ornata; spira brevissima; anfr. $4\frac{1}{2}$ planiusculi, ultimus subito

* T. umbilicata, orbiculato-depressa, albo-lutescente, superne fusco-unizonata; anfractibus convexiusculis, ultimo cylindraceo; apertura ovato-rotunda, perobliqua, marginibus continuis; epidermide raripilosa. — Diam. 25, alt. 12 mill. (Desh. l. c.)

descendens; umbilicus infundibuliformis; apertura subhorizontalis, elliptica; perist. simplex, marginibus plerumque junctis, supero breviter expanso, basali angulatim reflexo. — Diam. maj. 15, min. 12, alt. 7 mill. (Coll. Nr. 593.)

Helix fallaciosa (Helicella) Fér. pr. 179. Hist. t. 71. f. 4.

— — Pfr. Symb. II. p. 27.

— — Chemn. ed. II. Helix N. 503. t. 82. f. 18—21.

Theba fallaciosa Beck ind. p. 12.

β. Minor, unicolor, alba: Fér. t. 71. f. 3.

γ. Minima, cingulis pluribus fuscis ornata: diam. maj. 11, min. 9, alt. 5 mill. (Spec.)

Helix fallaciosa Fér. t. 71. f. 2.

Habitat in India orientali: prope Coimbatore (Leschenault); in insula Ceylon (Templeton in Mus. Cuming.).

958. *H. nilagirica* Pfr.

T. late umbilicata, depressa, discoidea, striata, corneo-albida, linea unica rufa supra peripheriam cincta; spira planiuscula; anfr. 5 convexiusculi, lente accrescentes, ultimus antice abrupte deflexus; umbilicus latissimus, anfractum penultimum late monstrans, medio angustus, pervius; apertura parva, horizontalis, rotundato-ovalis; perist. continuum, album, sublabiatum, reflexum. — Diam. maj. 14½, min. 12, alt. 5½ mill. (Mus. Cuming.)

Helix nilagirica Pfr. in Proc. Zool. Soc. 1845. p. 130.

— — Phil. Icon. II. 11. p. 87. Helix t. 7. f. 11.

— — Chemn. ed. II. Helix N. 502. t. 82. f. 15—17.

Habitat in montibus «Neelgherries» Indiae orientalis.

959. *H. delibrata* Benson. †

T. depresso-plana, subtus tumida, epidermide cornea decidua; anfr. 4 transverse striati; apertura transverse rotundato-ovata; peritrema vix continuum, reflexum; umbilicus latus, anfractus plerosque exhibens. — Diam. 0,9 poll. (B.)

Helix delibratus Bens. in Journ. As. Soc. V. p. 352.

Habitat in Bengalìa.

• Obs. «Affinis *H. corneae* Drap.»

960. *H. livescens* Jan. †

T. umbilicata, depressa, solida, livida; apertura circinnata; perist. continuum, reflexum. — Alt. 3, lat. 6 lin. Aperturae diam. 3 lin. (Jan.)

Helix livescens Crist. et Jan. cat. Mantissa p. 2.

Habitat in Italia meridionali.

961. *H. coeruleans* Mühlfeldt.

T. umbilicata, depressa, subtus turgida, cocrulescenti-livida, striata; spira apice mammillata; anfr. 5 convexi, ultimus antice deflexus; umbilicus medioeris, semiobtectus; apertura perobliqua, circularis, intus fuscescens; perist. simplex, marginibus continuis, basali labiato, subreflexo. — Diam. maj. 17, min. 15, alt. 11½ mill. (Coll. Nr. 594.)

Helix coeruleans Mühlf. Mus.

Habitat in insula Madagascar.

977. *H. haematostoma* Jan. †

T. depressa, albida, vertice acutissimo; anfractus ventricosi; apertura circularis, ampla; perist. continuum, reflexum, carcum. — Alt. 8 lin., lat. 4 poll. 6 lin., apert. diam. 10 lin. (Jan.)

Helix haematostoma Jan Mantissa p. 2.

Habitat in India orientali, Bengalía.

Obs. Nonne potius *Cyclostomatis* species, involvulo affinis?

978. *H. planorbella* Lamarck. †

T. orbiculato-depressa, umbilicata, minutissime plicata, luteo-virens, fusco-subfasciata: plicis longitudinalibus obliquis, acutis; labrum margine album, reflexum. — Diam. 8 lin. (Lam.)

Helix planorbella Lam. 82. p. 88. ed. Dh. p. 66.

Campylaea planorbella Beck ind. p. 24.

Enc. méth. t. 462. f. 5. }
Hel. strigata β *Fér.* t. 67. f. 8. } ex Lam.

Habitat in insula Portorico (Maugé, Lam.), Teneriffa (Beck).

Obs. Species dubia, quam nondum vidi. Icones citatae valde inter se discrepantes ad unam eandemque speciem referri non possunt.

979. ***H. purpurostoma* Le Guillou. †**

T. orbicularis, umbilicata, supra plana, alba, pellucida; anfr. $4\frac{1}{2}$ convexiusculi, sutura profunda sat distincti, ultimus fascia nigro-purpurascente latiuscula spiram decurrente ornatus, subtus convexiusculus, albus; umbilicus profundus, mediocris, extus effusus et angulo marginatus; apertura obliquissima, rotundata; perist. breve reflexum, intus et extus roseum, strangulatum. — Diam. 20, alt. 9 mill. (G.)

Helix purpurostoma Le Guill. in Revue zool. 1842. p. 144.

Habitat ad Triton-Bay Novae Guinaeae.

980. ***H. proxima* Férussac.**

T. umbilicata, orbiculato-convexiuscula, leviter striata, nitida, alba, basi fuscescens, fusco-lineata; spira subplana; anfr. $5\frac{1}{2}$, ultimus cylindraceus, antice deflexus; apertura perobliqua, lunato-ovalis, intus fuscescens; perist. simplex, tenue, marginibus callo junctis, supero arcuato, expanso, basali strictiusculo, reflexo. — Diam. maj. 24, min. 19, alt. 11 mill. (Coll. Metcalf.)

Helix proxima (Helicella) *Fér.* pr. 178. Hist. t. 74. f. 5.

— — *Desh.* in *Fér.* hist. p. 29. *)

— — *Chemn.* ed. II. *Helix* N. 454. t. 76. f. 4—6.

Planispira proxima Beck ind. p. 30.

Habitat in Indiae orientalis provincia Coimbetor (presqu' ile au delà du Gange: Leschenault, Desh.).

981. ***H. Reeveana* Pfr.**

T. umbilicata, subdiscoidea, tenuiuscula, oblique striata, albida, zonis 3—5 rufis ornata; spira vix convexiuscula, obtusa; anfr. $4\frac{1}{2}$ —5 planiusculi, ultimus antice subito deflexus, basi concentrice et confertim striatus; umbilicus mediocris, pervius; apertura subhorizontalis, transverse ovalis; perist. subsimplex, reflexum, marginibus junctis. — Diam. maj. 30, min. 24, alt. 12 mill. (Coll. Nr. 604.)

Helix Reeveana Pfr. in Proc. Zool. Soc. 1846. p. 42.

*) T. orbiculato-depressa, albo-fuscescens, obscure striata, late umbilicata; ultimo anfractu cylindraceo; apertura ovato-rotunda; margine albo, reflexo; peristomate continuo. — Diam. 22, alt. 13 mill. (Desh. l. c.)

Helix Reeveana Chemn. ed. II. *Helix* N. 451. t. 73. f. 6 - 8.

— *Lasallii* Collect. Nec Eydoux.

Habitat in insula Zebu Philippinarum (Cuming).

982. *H. Taranaki* Gray.

T. umbilicata, depressa, solidiuscula, pallide cornea, nitidula, superne confertim costulato-striata, basi laevior; spira parum elevata; anfr. 5 convexiuseuli, ultimus latior, antice vix descendens; umbilicus medioeris, pervius; apertura transverse lunato-ovalis; perist. tenue, expansum, intus nitide album, margine basali strictiuseulo, reflexo, columellari dilatato, patente. — Diam. maj. 17, min. 14, alt. 8 mill. (Coll. Nr. 602.)

Helix Taranaki Gray New-Zeal. t. 1. f. 6. 7.

— — *Pfr.* Symb. III. p. 79.

— — *Chemn.* ed. II. *Helix* N. 452. t. 75. f. 4. 5.

Habitat in Nova Seelandia; ins. Possessionis in Torres-Strait (Ince).

983. *H. Villiersii* Orbigny.

T. umbilicata, orbiculato-depressa, tenuis, rugosa, profunde et irregulariter plicata (plicis obliquis, acutis, interruptis), fusco-cornea, lineis angustis fuscis vittata; spira vix elevata; anfr. 5 planiuseuli, subcarinati; apertura perobliqua, lunato-ovalis; perist. tenue, acutum, margine supero expanso, columellari dilatato, ad umbilicum medioerem reflexo. — Diam. maj. 23, min. 19, alt. 14 mill. (Mus. Cuming.)

Helix Villiersii Orb. canar. p. 57. t. 3. f. 12—14.

Habitat in insulis Canariis: Gomera (Orb.).

984. *H. desidens* Rang.

T. umbilicata, depressa, striata, tenuis, fusca, superne planiusecula, ad peripheriam obtuse angulata, basi convexior; anfr. $4\frac{1}{2}$ planiuseuli; umbilicus medioeris; apertura vix obliqua, rotundato-lunaris; perist. simplex, margine supero parum expanso, basali vix reflexo, ad umbilicum non dilatato. — Diam. maj. 16, min. 14, alt. $7\frac{1}{2}$ mill. (Coll. Nr. 603.)

Helix desidens Rang in Guér. mag. 1834. t. 48.

— — *Lam.* ed. Dh. 218. p. 132.

— — *Chemn.* ed. II. *Helix* N. 463. t. 77. f. 10—13.

Habitat in insulae Martinique monte « Pelée » (Rang).

985. *H. cyclostomata* Le Guillou. †

T. orbicularis, planata, umbilicata, pellucida, dilute olivacea, papillis linearibus obsita; anfr. 4 convexiuseuli, lineola fusca fasciati, sutura discreti; spira convexa, vix exserta; apertura cir-

cularis, extus tenue strangulata; perist. reflexum, tenuissimum; umbilicus infundibuliformis, profundus. — Diam. 7—8, alt. 4—4½ mill. (G.)

Helix cyclostomata Le Guill. in Revue zool. 1842. p. 141.

Habitat in insula Warrior («detroit de Torrès»: Guill.).

Obs. An forte eadem, quam Nr. 947 nomine *H. Tuckeri* descripsi?

§. 70.

986. *H. bifurcata* Deshayes.

T. umbilicata, depressa, orbicularis, leviter striata, fulva, subtus pallida, vel medio tantum pallide cingulata; anfr. 5 planulati, ultimus obsolete carinatus, antice subito deflexus; apertura depressa, transverse pyriformis, lamina elongata, compressa, erecta, intrante coarctata; perist. albidum, reflexum, marginibus callo prominente junctis, basali dentibus 2, altero depresso triangulari, altero bifurcato, instructo. — Diam. maj. 37, min. 33, alt. 15 mill. (Mus. Cuming. spec. max. et Coll. Nr. 604.)

Helix bifurcata Desh. in Guér. mag. t. 111. f. 2.

Solarium serpens Spix test. bras. t. 17. f. 2.

Helix serpens Pfr. Symb. II. p. 100.

— *Chemn.* ed. II. *Helix* N. 672. t. 107. f. 7—9.

Helix punctata Wagn. in Spix p. 23.

β. Unicolor:

Helix pellis serpentis var. Fér. hist. t. 74. f. 2.

Habitat in Brasilia, in sylvis prov. Pernambucanæ et Piaulhiensis (Spix).

Obs. Persimilis *H. heliacæ* (Nr. 966.), carina acuta, sculptura etc. distincta.

1020. *H. lanx* Férussac.

T. late umbilicata, depressa, carinata, oblique striata et rugulosa, fusca, infra carinam saturatior; anfr. 5 planiusculi, ultimus antice subdeflexus; umbilicus magnus, pervius; apertura lunato-elliptica, intus margaritacea; perist. reflexum, intus coerulescenti-album, marginibus approximatis, callo tenui junctis, dextro sinuoso, basali strictiusculo. — R. a. = 4 : 2. — Diam. maj. 53, min. 46, alt. 22 mill. (Coll. Nr. 624.)

Helix lanx (Helicigona) Fér. pr. 156. Hist. t. 65. f. 7.

— — Pfr. Symb. I. p. 41.

— — Pot. et Mich. gal. I. p. 123?

— — Chemn. ed. II. Helix N. 667. t. 106. f. 1—3.

β. Major:

Helix Radama Less. voy. de la Coq. p. 304. t. 7. f. 1.

— — Less. Cent. zool. t. 9.

Habitat in insula Madagascar.

1021. *H. Lamarei* Menke.

T. rimato-perforata, superne depressa, subtus inflata, tenuis, minutissime granulata, albida, epidermide tenui, corneo-virente induta; spira planiuscula; anfr. 4, ultimus acute carinatus, supra carinam antice evauescentem canaliculatus, subtus valde inflatus, basi compressus; umbilicus anfractum penultimum modo monstrans; apertura obliqua, subcircularis; perist. simplex, superne late expansum, subreflexum, basi breviter reflexum, marginibus approximatis, callo junctis. — Diam. maj. 34, min. 26, alt. 16 mill. (Coll. Menkean.)

Helix Lamarei Mke mss.

— — Pfr. Symb. III. p. 79.

Habitat in insula Madagascar (Lamarc-Piquot).

1022. *H. Xystera* Valenciennes.

T. umbilicata, orbicularis, depressa, acutissime carinata, tenuis, diaphana, olivaceo-fusca; sutura levissima; anfr. 4 plani, ultimus basi convexus, circa umbilicum infundibuliformem subangulatus; apertura perobliqua, depressa, irregularis; perist.

reflexum, margine supero dilatato, columellari brevi cum basali angulum obtusum formante. — R. a. = 4 : 2. — Diam. maj. 38, min. 32, alt. $44\frac{1}{2}$ mill. (Coll. Nr. 622.)

Helix Xystera Val. in Mus. Paris.

— — Pfr. Symb. I. p. 41.

— — Chemn. ed. II. Helix N. 346. t. 61. f. 4—6.

— Fér. hist. t. 62 A. f. 5—7.

— *madagascariensis* Encycl. méth. t. 462. f. 2?

— *lanx* Desh. in Enc. méth. II. p. 261. N. 438.

Carocolla madagascariensis Lam. 10. p. 98. ed. Dh. p. 447.

Lucerna lanx Swains. Malac. p. 329.

Habitat in insula Madagascar.

Obs. Hic conf. H. omphalodes Nr. 972.

1023. *H. unicolor* Pfr.

T. umbilicata, depressa, acute carinata, tenuis, fusca, superne subtiliter striata, subtus lineis nonnullis spiralibus elevatis munita; spira depresso-conoidea; anfr. 5 planiusculi, sensim accrescentes, ultimus antice non descendens, basi convexus, ad umbilicum angustum abrupte angulatus; apertura rhomboidea; perist. saturate fuscum, marginibus callo tenuissimo junctis, supero dilatato, expanso, basali ascendente, stricto, columellari brevi, dilatato, umbilicum semioccultante, cum basali angulatim juncto. — Diam. maj. 32, min. 28, alt. 16 mill. (Mus. Cuming. et Gruner.)

Helix unicolor Pfr. in Proc. Zool. Soc. 1845. p. 64.

— — Chemn. ed. II. Helix N. 345. t. 64. f. 4—3.

Habitat . . . ?

Obs. Constanter differt ab H. Xystera umbilico angusto, spira elata, anfractuum numero etc.

1024. *H. fulgurata* Sowerby.

T. umbilicata, depressa, acute carinata, lineis confertis longitudinalibus et transversis regulariter decussata, nitida, albida, lineis rufis elegantissime fulgurata; spira subplanata; anfr. 4 planuli, ultimus subtus fascia unica rufa ornatus, basi inflatus, circa umbilicum anguste infundibuliformem angulatus; apertura subtriangularis, intus nitida, livida; perist. castaneum, marginibus callo castaneo introrsum diffuso junctis, supero subexpanso, basali reflexo, cum columellari brevi, obliquo angulum obtusum formante. — Diam. maj. 37, min. 30, alt. $44\frac{1}{2}$ mill. (Spec. unic. Mus. Brit.)

Helix fulgurata Sow. in Malac. and Conch. mag. I. p. 47. c. tab.

— — Pfr. Symb. III. p. 79.

Lucerna fulgurata Swains. Malac. p. 329.

Habitat . . . ?

1025. **H. lancula** Fér.

T. umbilicata, orbicularis, depressa, oblique striata, lincis confertissimis concentricis sub lente decussata, nitide olivaceo-fusca, carinata; carina antice obsoleta; spira parum elata, pallida; anfr. 4 planati, ultimus basi planiusculus, circa umbilicum medio-crem, non pervium subangulatus; apertura perobliqua, transverse lunato-elliptica; perist. subincrassatum, breviter reflexum, coerule-lescenti-fuscum, marginibus callo introrsum diffuso atro-purpureo junctis, dextro dilatato, depresso, basali strictiusculo, cum columellari obliquo angulum obtusissimum formante. — Diam. maj. 32, min. 28, alt. 14 mill. (Mus. Brit.)

Helix lancula (Helicigona) Fér. pr. 157. Hist. t. 65. f. 4—6.

— — Pfr. Symb. III. p. 79.

— — Chemn. ed. II. Helix N. 347; t. 61. f. 12—14.

Ampeleta lancula Beck ind. p. 31.

Habitat in insula Madagascar.

Obs. Differt ab *H. fulgurata*, cui proxima, sculptura, spira elevata, basi planulata, apertura subhorizontali, umbilico non pervio.

1026. **H. Terveriana (Carocolla) Grateloup. †**

T. orbiculata, subdepressa, utrinque convexa, carinata, umbilicata, subtilissime striata, glabra, pallide viridis vel flavescens; anfr. 4; apertura subovata, paululum angusta; labrum margine reflexum, intus album; columella superne violacea; umbilicus parvulus. — Diam. 27, alt. 15 mill. (G.)

Carocolla Terveriana Grat. Bord. XI. p. 404. t. 1. f. 16.

Helix lancula Grat. ibid. p. 163.

Habitat in insula Madagascar (Duisabo, Grat.).

Obs. *H. lanculae* valde affinem dicit auctor; diversa tamen videtur.

1027. **H. parmula (Carocolla) Brodcrip.**

T. umbilicata, depressissima, discoidea, carinata, tenuis, oblique striata, pallide fulva, fasciis angustis rufis circumdata; spira vix elata; anfr. $4\frac{1}{2}$ —5 plani, ultimus ad aperturam rugosus et angulatum deflexus; carina acutissima, alba; umbilicus mediocris, pervius; apertura horizontalis, lanceolata; perist. simplex, marginibus junctis, supero expanso, basali late reflexo. — R. a. = 5:7. — Diam. maj. 43, min. 37, alt. 43 mill. (Coll. Nr. 623.)

Carocolla parmula Brod. in Proc. Zool. Soc. 1841. p. 38.

— — Reeve Conch. syst. II. t. 167. f. 7.

Helix parmula Pfr. Symb. II. p. 36.

— — Chemn. ed. II. Helix N. 668. t. 106. f. 4—6.

β. Minor, diam. 34, alt. 10 mill.

Habitat in insulis Philippinis: α Negros, β Zebu (Cuming).

1028. **H. Oxytes Benson. †**

T. ferrugineo-cornea, depressa; spira convexa, apice planato; peripheria acuta; aufr. 6, oblique subplicati, suturis non excavatis; perist. subreflexum; umbilicus latus et profundus, anfractus usque ad apicem exhibens. — Diam. 4,8 poll. (B.)

Helix Oxytes Bens. in Journ. As. Soc. V. p. 354.

Habitat in Bengalìa.

Obs. «Differt ab *H. acumine Dalmatiae* magnitudine, colore et labro subreflexo».

1029. **H. cheïri Lesson. †**

T. depressa, umbilicata, solidiuscula, oblique subrugosa, lutea, rufo-striata; anfractus ultimus late carinatus; sutura profunda; umbilicus maguus, infundibuliformis; apertura obovata, intus candida; perist. crassum, reflexum, margine glabro. — Diam. 46, alt. 8 lin. (L.)

Helix cheïri Less. voy. de la Coq. p. 308.

Habitat ad Dorey Novae Guineae.

1030. **H. horizontalis Pfr.**

T. umbilicata, depressa, solida, oblique striata, carinata, luteo-cornea, rufo-fasciata: fasciis 2 supra, 4 infra cariuam; anfr. 5 plani, ultimus superne convexus, basi planulatus, ad aperturam subito fere verticaliter deflexus; apertura horizontalis, integra, oblonga; perist. crassum, reflexum, carneum, marginibus parallelis, junctis. — R. a. = 4 : 5. — Diam. maj. 34, min. 26, alt. 14 mill. (Mus. Cuming.)

Helix horizontalis Pfr. in Proc. Zool. Soc. 1845. p. 40.

β. Major, rufescens, perist. subsinuoso: diam. maj. 40, min. 34, alt. 45 mill. (Mus. Cuming.)

Habitat in insula Bantayon Philippinarum (Cuming).

Obs. Affinis *H. Reeveanae* (Nr. 984.), umbilico angustiore, carina distincta, perist. crasso, minus expanso, marginibus parallelis diversa. Differt ab *H. Lasallii* (Nr. 990.) praeter colorem apertura vix irregulari et anfractu ultimo in toto ambitu deflexo.

1031. **H. marginata Müller.**

T. umbilicata, lenticularis, acute cariuata, oblique striata, pallide fulvescens, fasciis pluribus rufis ornata; spira parum elata; anfr. 4 planiusculi, ultimus juxta aperturam superne inflatus, valde deflexus; carina alba, usque ad apicem conspicua; umbilicus angustus, pervius; apertura horizontalis, elliptica; perist. simplex, marginibus subjunctis, supero late expanso, ba-

sali reflexo. — R. a. = 13 : 20. — Diam. maj. 25, min. 22, alt. 9 mill. (Coll. Nr. 624.)

Helix marginata Müll. verm. II. p. 41. N. 244. *)

— — Chemn. ed. II. Helix N. 472. t. 78. f. 7—9.

— *scabrosa* Fér. pr. 140 bis. Hist. t. 63. f. 1. 2.

— *Grayana* Pfr. Symb. II. p. 29.

Carocolla scabrosa Gray in Ann. of Phil. New ser. IX. p. 442.

Caracolla marginata Beck ind. p. 31.

β. Major, fasciis saturationibus, subaequalibus: diam. maj. 30, min. 25, alt. 11 mill (Spec.)

Habitat in insula Camiguing Philippinarum (Cuming).

Obs. Affinis *H. Reeveanae*, carina acuta et anfractibus planioribus distincta.

1032. *H. gallinula* Pfr.

T. umbilicata, lenticularis, acute carinata, solida, flavescenti-grisea, fasciis nonnullis rufis et epidermide hydrophana, maculas triangulares, pallidas formante, ornata; anfr. $4\frac{1}{2}$ plani, ultimus ad aperturam subito deslexus; apertura horizontalis, elliptica; perist. simplex, marginibus callo tenui junctis, basali reflexo, ad umbilicum mediocrem, pervium arcuato. — Diam. maj. 25, min. 20, alt. 9 mill. (Coll. Nr. 625.)

Helix gallinula Pfr. in Proc. Zool. Soc. 1845. p. 40.

— — Phil. Icon. I. 7. p. 153. Helix t. 5. f. 5.

β. Minor, testa basi oblique rugulosa, apertura lateraliter minus dilatata.

γ. Utrunque lineis impressis, obliquis, circa umbilicum subconcentricis notata, fasciis obsoletis.

Habitat in insulis Philippinis: α et β Luzon, γ Zebu (Cuming).

Obs. Differt ab *H. Listeri* (Nr. 1046.) magnitudine, sculptura et deficiente dente aperturae.

1033. *H. gabata* Gould. †

T. albido-cornea, supra planulata, iufra valde convexa, late et profunde umbilicata; anfr. $4\frac{1}{2}$ leviter striati, ultimus carina castanea circumdatus; apertura subquadrata; labrum album, reflexum. — Diam. $\frac{4}{5}$, alt. vix $\frac{2}{5}$ " (G.) — Diam. maj. 22, min. 19, alt. 9 mill. (ex ic.)

Helix (*Caracolla*) *gabata* Gould in Bost. journ. IV. p. 454. t. 24. f. 9.

Habitat in provincia Tavoy imperii Birmani.

*) T. subumbilicata, carinata, subdepressa, oblique striata, alba, fasciis rufis; apertura transversali. — Diam. 9 lin. — T. valde carinata, ita ut carina marginem distinctum, album formet; supra convexa, subtus planiuscula. Anfractus 4 glabri. Umbilicus pervius quidem est, at unus tantum anfractus in eo conspicitur. Apertura transversa, subtriangularis. Labrum reflexum, album. Fasciae in fauce pelluentes. (Müll. l c.)

1033^a. **H. merguiensis Philippi.**

T. umbilicata, depressa, utrinque convexa, carinata, tenuis, subtilissime granulato-striata, pilis sparsis, brevibus obsita, pallide fuscescens; carina subcompressa, linea castanea antice notata, spira parum elevata, obtusa; anfr. 4¹/₂ convexiusculi, ultimus antice deflexus, basi inflatus, circa umbilicum mediocrem, conicum, profundum subcompressus; apertura perobliqua, elliptica; perist. undique expansum, reflexiusculum, intus nitide albidum, marginibus fere contiguis, supero leviter, basali valde arcuato. — Diam. maj. 21, min. 17¹/₂, alt. 9 mill. (Coll. Nr. 626.)

Helix Merguiensis Phil. in Zeitschr. f. Mal. 1846. p. 192.

— — Chemn. ed. II. *Helix* N. 669. t. 406. f. 7—9.

Habitat ad Mergui imperii Birmani (Th. Philippi).

Obs. Differt a praecedente testa granulosa et pilosa, spira convexa, umbilico angustiore, peristom. latius reflexo, margine supero arcuato.

1034. **H. orientalis (Carocolla) Gray. †**

T. supra convexiuscula, infra convexa, umbilicata, cornea, pellucida; anfr. 7—8 acute carinati, superne dense concentrice striati; apertura lineari-lunata; perist. reflexum, album. — Axis ¹/₄, diam. ¹/₂ unc. (Gr.)

Carocolla orientalis Gray in Ann. of. Phil. 1825. IX. p. 412.

Habitat in India orientali?

§. 73.

1035. **H. labyrinth Chemnitz.**

T. umbilicata, lenticularis, rufa; anfr. 6 convexiusculi, ultimus basi constrictus, biserobiculatus; apertura subhorizontalis, auriformis, coarctata; perist. subincrassatum, breviter reflexum, sinuosum, ad carinam canaliculatum, marginibus callo alte prominente, laminam erectam latam, intrantem emittente junctis, supero arcuato, basali flexuoso, juxta canalem lamina latissima triangulari, oppositam fere attingente, et dente valido in medio instructo; lamina tertia parvula in fundo marginis superioris — Diam. maj. 44, min. 37, alt. 16 mill. (Mus. Cuming.)

Helix labyrinth Chemn. XI. p. 274. t. 208. f. 2048.

Knorr Vergnüg. V. p. 42. t. 26. f. 6. 7!

Habitat prope Panama.

1037^a. **H. leucodon** Pfr.

T. anguste umbilicata, depressa, sublenticularis, undique subtiliter granulata, saturate castanea; spira plane elevata, vertice obtuso; anfr. 5 subplanulati, ultimus carinatus, antice gibbus, ad aperturam subito deflexus, constrictus, subtus scrobiculatus; apertura perobliqua, irregulariter pyriformis; perist. tenue, album, expansum, reflexiusculum, marginibus lamina elevata, flexuosa, medio lamellam erectam, linguiformem emittente junctis, supero dente 1 parvulo, basali 2—3 (primo infra carinam acuto, secundo obtusiore, tertio huic approximato, subobsoleto) munitis. — Diam. maj. 24, min. 19, alt. 10 mill. (Coll. Philippian.)

Helix leucodon Pfr. in Zeitschr. f. Mal. 1847. p. 84.

Habitat . . . ?

1038. **H. quadridentata (Carocolla) Broderip.**

T. umbilicata, orbiculata, tenuiuscula, striata, granulata, fusca; spira depresso-conoidea; anfr. 5½ vix convexiusculi, ultimus carinatus, basi convexus, antice subito dellexus, scrobiculatus; apertura auriformis, fusca, dente lamelliformi parietis aperturalis coarctata; perist. simplex, marginibus callo funiculato junctis, supero late expanso, basali sinuoso, infra carinam dente acuto, prominente, et prope umbilicum medioerem 2 minoribus instructo. — Diam. maj. 49, min. 17, alt. 9 mill. (Mus. Cuming.)

Carocolla quadridentata Brod. in Proc. Zool. Soc. 1832. p. 30.

— — *Müll.* synops. p. 14.

Labyrinthus quadridentata Beck ind. p. 33.

Habitat in sylvis Americae centralis (Cuming).

1038^a. **H. Tamsiana** Dunker.

T. medioeriter umbilicata, depresso conica, granulata, fusca, acute carinata; spira conoidea, vertice obtusiusculo; anfr. 5 subplani, ultimus basi vix convexiusculus, antice angulatim deflexus, ad aperturam constrictus; apertura subhorizontalis, auriformis, quadridentata; perist. tenue, marginibus lamina callosa, umbilici partem tegente et medio dentem linguiformem, intrantem emittente junctis, supero expanso, unidentato, basali reflexo, dentibus 2 fere aequalibus munito. — Diam. maj. 15, min. 14, alt. 7½ mill. (Coll. Dunk.)

Helix Tamsiana Dunk. in Zeitschr. f. Mal. 1847. p. 84.

Habitat prope Porto Cabello Venezuelae. Legit Dr. Tams.

1039. **H. auriculina** Petit.

T. umbilicata, orbiculata, carinata, utrinque convexa, granulato-striata, fulva, ad carinam lutescens; anfr. 5 planulati, ultimus subito deflexus, basi scrobiculatus; apertura subhorizontalis, auriformis, ringens, plicis 3 coarctata: una lamelliformi, profunde intrante ad parietem aperturalem, secunda dentiformi et tertia furcata in margine basali; perist. album, reflexum, marginibus ad umbilicum mediocrem, pervium junctis. — Diam. maj. 24½, min. 18, alt. 10 mill. (Coll. Nr. 629.)

Helix auriculina Petit in Revue zool. 1840. p. 74.

— — Guérin mag. 1841. t. 33.

— — Chemn. ed. II. Helix N. 665. t. 105. f. 5—7.

Habitat in Guyana.

Obs. Peraffinis sequenti, nec non varietatibus nonnullis *H. bifurcata* Dh., in hanc fere omnino transiens.

1040. **H. Leprieurii** Petit.

T. umbilicata, orbiculata, conoideo-depressa, fulva, subcarinata: carina albicante; anfr. 5 vix convexiusculi, ultimus antice subito deflexus, basi scrobiculatus; umbilicus mediocris; apertura angustissima, subhorizontalis, subauriformis; perist. subincrassatum, album, marginibus lamella erecta, umbilicum semioccultante, aliamque angulatim longe intrantem emittente junctis, supero expanso, basali sinuoso, reflexo, tuberculo dentiformi et juxta carinam dente valido, geminato instructo. — Diam. maj. 24, min. 24, alt. 11 mill. (Mus. Cuming.)

Helix Leprieurii Petit in Revue zool. 1840. p. 74.

— — Guérin mag. 1841. t. 32.

Habitat in Guyana.

Obs. Differt a praecedente spira magis elevata, apertura transverse elongata, antice canaliculata et perist. sinuoso valide dentato.

* * *

1041. **H. Oreas** Koch.

T. umbilicata, depressa, angulata, striata et minutissime granulosa, castanea; spira vix elevata; anfr. 5 plaiusculi, ultimus antice rotundatus, ad aperturam constrictus, basi inflatus; apertura perobliqua, semiovalis, bidentata, intus livida; perist. album, reflexum, marginibus callo albo funiculato junctis, supero arcuato, basali strictiusculo, ambobus dente acuto separatis, dente altero in pariete aperturali illi opposito. — Diam. maj. 57, min. 46, alt. 26 mill. (Coll. Nr. 630.)

Helix Oreas Koch in Phil. Icon. I. 7. p. 151. Helix t. 5. f. 2.

Helix Oreas Chemn. ed. II. *Helix* N. 449. t. 75. f. 4—3.

Habitat in vallibus elevatis reipublicae Novae Granadae (mont. Quendeu).

Obs. Similis *H. calomorphae* Jonas (Nr. 823.) imperforatae!

1042. **H. triodonta Orbigny. †**

T. orbiculato-convexa, carinata, umbilicata, erassa, laevigata, fusco-rubescens; spira brevis, obtusa; anfr. 5; apertura subrotunda, peristomata, tridentata, albida, intus fusca; labrum erassum, reflexum. (O.) — Diam. maj. 44, min. 36, alt. 26 mill. (ex ic.)

Helix triodonta (Helicodonta) Orb. syn. p. 3.

— — Orb. voy. p. 234. t. 24. f. 1—3.

Habitat prope Guayaquil Columbiae.

1043. **H. subcastanea Pfr.**

T. umbilicata, orbiculato-convexa, subcastanea, minutissime granulata, spira subelata; anfr. $5\frac{1}{2}$ vix convexiusculi, ultimus angulatus, antice subito deflexus, basi inflatus, ad aperturam constrictus et scrobiculatus; umbilicus mediocris; apertura perobliqua, auricularis; perist. album, incrassatum, marginibus callo tenui junctis, dextro arcuato, basali strictiusculo, denticulato, ambobus dente magno intrante separatis. — Diam. maj. 47, min. 34, alt. 21 mill. (Mus. Cuming.)

Carocolla globosa Brod. in Proc. Zool. Soc. 4832. p. 30.

— — Müll. synops. p. 43.

Helix subcastanea Pfr. Symb. II. p. 403.

Habitat in sylvis insulae Tumaco-Columbiacae occidentalis (Cuming).

Obs. Nomen mutandum erat ob *H. globosam* Sow. foss.

Hel. 1043^a Hel. anomala Pfr. in Zs. 1848. pag. 119.

1044. **H. soror Férussac.**

T. umbilicata, depressa, lenticularis, acute carinata, oblique striata, granulata, violaceo-fusca, medio late albido-cingulata; anfr. $4\frac{1}{2}$ planulati, ultimus antice deflexus, basi vix convexus, antice scrobiculatus; apertura subhorizontalis, elliptica; perist. subincrassatum, marginibus callo junctis, supero sinuoso, expanso, basali reflexo, umbilicum medioerem semitegente, denticulis 4 aequaliter distantibus, lamelliformibus, intrantibus armato. — Diam. maj. 32, min. 28, alt. 11 mill. (Coll. Nr. 631.)

Helix soror (Helicodonta) Fér. pr. 118. Hist. t. 54. f. 4.

— — Pfr. Symb. III. p. 80.

— — Chemn. ed. II. *Helix* N. 469. t. 78. f. 3. 4.

Carocolla soror Wood suppl. t. 7. f. 51.

— *quadridentata* Mke cat. Malsb. p. 5.

β. Magis depressa, acutius carinata, unicolor fulvescens: diam. maj. 42, min. 37, alt. 15 mill. (ex ic.)

Helix soror var. *Fér.* t. 54 A. f. 1—3.

Habitat in insula Jamaica.

1045. *H. Schroeteriana* Pfr.

T. umbilicata, depressa, lenticularis, acute carinata, solida, obsolete granulata, luteola, utrinque late rufo-fasciata; spira sub-elevata; anfr. 5 planulati, ultimus antice deflexus, basi inflatus, antice profunde scrobiculatus; apertura subhorizontalis, elliptica; perist. incrassatum, late expansum, reflexum, fusco-carneum, marginibus callo junctis, supero leviter arcuato, basali dilatato, umbilicum angustum semitegente, intus 3—4 dentato: dentibus 2 majoribus basi junctis, 1—2 minoribus prope columellam. — Diam. maj. 31, min. 27, alt. 14 mill. (Coll. Nr. 632.)

Helix Schroeteriana Pfr. in Proc. Zool. Soc. 1845. p. 44.

— — *Phil.* Icon. II. 15. p. 185. *Helix* t. 9. f. 7.

— — *Chemn.* ed. II. *Helix* N. 468. t. 78. f. 5. 6.

Habitat . . . ?

Obs. Dentium dispositione persimilis *H. Martinianae* (Nr. 820.) et *tridentinae* (Nr. 996.), ab illa anfractu ultimo deflexo et umbilico aperto, a tridentina carina acuta facile distinguenda.

1046. *H. Listeri* (*Carocolla*) Gray.

T. umbilicata, depressa, irregularis, lenticularis, superne convexior, acute carinata, striis confertissimis obsoletis notata, albida, maculis irregularibus, brunneis, fasciisque interruptis rufis ornata; anfr. 4½ planiusculi, ultimus antice subito deflexus; umbilicus mediocris, pervius; apertura late elliptica; perist. simplex, reflexum, marginibus callo funiculato junctis, basali undentato. — R. a. = 4:7. — Diam. maj. 42, min. 32, alt. 13 mill. (Coll. Nr. 633.)

Carocolla Listeri Gray in Ann. of Phil. New series IX. p. 412.

Lister t. 66. f. 64. imperfect.

β. Spira clatiore: diam. maj. 32, min. 26, alt. 13 mill. (Spec.)

Habitat in insulis Philippinis: Negros, Luban, Luzon (Cuming).

Obs. Variat magnitudine et forma. In nonnullis anfractus ultimus basi irregulariter malleatus et juxta aperturam substrangulatus est.

1047. **H. rota (Carocolla) Brodcrip.**

T. umbilicata, superne planiuseula, basi inflata, carinata, irregulariter costata (costis basalibus validioribus, obtusis), sordide albida, fasciis angustis castaneis, 2 supra et 4 infra carinam acutam, tuberculis albis undulatam, ornata; anfr. $4\frac{1}{2}$ plani, ultimus antice subito deflexus, subtus constrictus; umbilicus mediocris, pervius; apertura lanceolata; perist. simplex, late expansum, marginibus solutis, junctis, basali unidentato. — R. a. = 2 : 3. — Diam. maj. 32, min. 26, alt. 14 mill. (Coll. Nr. 634.)

Helix rota (Carocolla) Brod. in Proc. Zool. Soc. 1841. p. 45.

— — Pfr. Symb. II. p. 38.

— — Chemn. ed. II. Helix N. 471. t. 78. f. 16—18.

Carocolla rota Reeve Conch. syst. II. t. 167. f. 1. 4.

Gallina rota Hartm. Gast. I. p. 197. t. 76.

Habitat in insula Siquijor Philippinarum (Cuming).

1048. **H. scrobiculata Pfr.**

T. umbilicata, lenticularis, tenuis, oblique rugosa, fulvido-albida, fusco-zonata, carinata, basi lineis minutissimis concentricis notata; spira parum elata, apice obtuso nitida, glabra; sutura linearis; anfr. $4\frac{1}{2}$ convexiusculi, ultimus antice angulatim deflexus, basi prope aperturam gibboso-inflatus; carina subacuta; umbilicus angustus, pervius; apertura transverse pyriformis; perist. simplex, continuum, superne expansum, basi late reflexum, unidentatum: dente obtuso, extus scrobiculum formante. — R. a. = 7 : 10. — Diam. maj. 29; min. 23, alt. 14 mill. (Coll. Nr. 635.)

Helix scrobiculata Pfr. in Proc. Zool. Soc. 1842. p. 88.

— — Pfr. Symb. II. p. 38.

— — Phil. Icon. II. 15. p. 135. Helix t. 9. f. 6.

— — Chemn. ed. II. Helix N. 470. t. 78. f. 13—15.

Habitat in insula Bohol Philippinarum (Cuming).

Obs. Affinis praecedenti, spira elatiore, carina simplice, subacuta et costis deficientibus diversa.

1049. **H. Hartwegi Pfr.**

T. umbilicata, depressa, carinata, solida, striatula, fusca; spira vix elevata; anfr. 5 planulati, ultimus basi paulo convexior, antice non descendens; umbilicus angustus, pervius; apertura perobliqua, irregulariter subquadrata; perist. album, incrassatum, breviter reflexum, marginibus callo junctis, dextro sinuoso, ba-

sali subrecto, dilatato, introrsum calloso, dente unico interposito. — Diam. maj. 23, min. 21½, alt. 12 mill. (Mus. Cuming.)

Helix Hartwegi Pfr. in Proc. Zool. Soc. 1843. p. 126.

Habitat circa « El Catamajia prope Loxa » reipublicae Aequatoris (Hartweg).

*
*
*

1050. *H. arcta* Lowe.

T. perforata, depressa, distincte et confertim costulata, pallide cornea, albo-marmorata, rufo-maculata et obsolete fasciata; spira vix convexa; anfr. 5½ planiusculi, ultimus carinatus, basi convexior, antice subito breviter deflexus; perforatio punctiformis; apertura perobliqua, lunato-circularis, dente oblique intrante, albo, calloso anfractus penultimi coarctata; perist. acutum, reflexum, intus albo-callosum, marginibus fere contiguis. — Diam. maj. 5, min. 4½, alt. 2¾ mill. (Coll. Nr. 636. Spec. Lowean.)

Helix arcta Lowe Faun. Mader. p. 42. t. 5. f. 7. (auct.)

— — Lam. ed. Dh. 206. p. 126.

— — Chemn. ed. II. Helix N. 701. t. 112. f. 5—8.

Habitat in Maderae collibus aridis maritimis.

Obs. Cl. Deshayes speciei diam. 4—5 lin. ascribit, forsán figura aucta deceptus?

§. 74.

1051. *H. Spixiana* Pfr.

T. late umbilicata, orbiculato-convexa, costulato-striata, albida aut luteo-virens; anfr. 6—7 convexusculi, lente accrescentes, ultimus non descendens; apertura vix obliqua, rotundato-lunaris; perist. brevissime reflexum, margine supero antrorsum arcuato, columellari brevi, dilatato. — Diam. maj. 34, min. 32, alt. 20 mill. (Coll. Nr. 637.)

Helix Spixiana Pfr. Symb. I. p. 40.

— — Chemn. ed. II. Helix N. 113. t. 19. f. 1—3.

— *perspectiva* Wagn. in Spix p. 24. Nee Say.

— *candida* Moric. Mém. Gen. IX. p. 43. t. 4. f. 1. Nee Gmel.

Solarium candidum Spix test. bras. t. 17. f. 3—5.

Artemon candidus Beck ind. p. 48.

β. Sculptura obsoleta, striis ad suturam modo conspicuis: diam. maj. 27, min. 24, alt. 14 mill. (Spec.)

Habitat in Brasiliae provinciis australioribus.

Obs. 1. Testae adultae saepe varicibus prominentibus, irregulariter dispositis munitae sunt, et reliquis quoque characteribus ad genus Streptaxin prope accedit.

Obs. 2. Nomen *H. candida* servari non potest ob *H. candidam* Gmel., etsi haec species valde dubia vel plane ignota sit. (Conf. Nr. 1100.)

1052. **H. Wagneri Pfr.**

T. late umbilicata, depressa, superne confertim costulata, basi laevigata, nitida, diaphana, cerco-hyalina; spira vix convexiuscula; anfr. 6 vix convexiusculi, ultimus superne subdepressus, subangulatus; apertura perobliqua, subtriangulato-lunaris; perist. nitide album, breviter reflexum, margine basali levis-sime arcuato, supero antrorsum dilatato, late prominente. — Diam. maj. 20, min. 17, alt. 9 mill. (Coll. Nr. 638.)

Helix Wagneri Pfr. Symb. I. p. 40.

— — *Chemn.* ed. II. *Helix* N. 114. t. 19. f. 4—6.

— *Coffreana* Moric. Mém. Gen. (1844.) IX. p. 44. t. 4. f. 2. 3.

Habitat in Brasilia.

1053. **H. chinensis Philippi.**

T. latissime et profunde umbilicata, striata, nitida, subpellucida, superne pallide fulvescens, basi albida, epidermide tenui fugacissima induta; spira vix elevata, apice non obtusata; anfr. 8 convexi, lente accrescentes, ultimus priores paulo superans, basi vix latior; apertura parvula, obliqua, lunato-circularis; perist. album, sublabiatum, breviter reflexum, marginibus approximatis. — Diam. maj. 25, min. 22, alt. 12 mill. (Coll. Nr. 639.)

Helix chinensis Phil. Icon. II. 9. p. 1. *Helix* t. 6. f. 1.

— — *Chemn.* ed. II. *Helix* N. 115. t. 19. f. 7. 8.

Habitat in China: insula aurea prope Nanking (Largilliert).

1054. **H. circulus Pfr.**

T. umbilicata, depressa, solida, ruguloso-striata, nitidula, alba; spira vix elevata, non obtusata; anfr. $5\frac{1}{2}$ convexi, ultimus subangulatus, non descendens; umbilicus medioeris, pervius; apertura obliqua, parvula, lunato-circularis, intus callo circulari coarctata; perist. breviter expansum, marginibus conniventibus. — Diam. maj. 19, min. 16, alt. 9 mill. (Mus. Cuming.)

Helix circulus Pfr. Symb. III. p. 76.

— — *Chemn.* ed. II. *Helix* N. 116. t. 19. f. 9—11.

Habitat . . . ?

* * *

1055. **H. polygyrata Born.**

T. latissime umbilicata, discoidea, superne planissima, subtus excavata, solida, striata, lineis minutis concentricis subdecussata, virenti-lutea, zonis latissimis nigricanti-rufis superne circumdata; anfr. 9 convexi, ultimus antice descendens, utrinque reliquis vix duplo latior; apertura perobliqua, lunato-rotundata;

perist. album, breviter reflexum, marginibus callo junctis. — Diam. maj. 46, min. 41, alt. 43 mill. (Coll. Nr. 640.)

Helix polygyrata Born test. p. 373. t. 14. f. 19. 20.

— — Chemn. IX. P. 2. p. 98. t. 127. f. 1124. 25.

— — (Helicella) Fér. pr. 494. Hist. t. 69 A. f. 7—9.

— — Desh. in Fér. hist. p. 4.

— — Moric. Mém. 3e suppl. p. 57. t. 5. f. 1—3.

— — Chemn. ed. II. Helix N. 568. t. 90. f. 1—3.

— *polygyra* Gmel. p. 3624. N. 233.

Polygyra? polygyrata Beck ind. p. 23.

Habitat in Brasilia.

Obs. Variat magnitudine. Specimina vidi paulo majora et multo minora. — Teste Moricand plicae dentiformes 3—5 in fundo anfractus ultimi, marginem nunquam attingentes, adsunt.

1056. *H. helicycloides* Orbigny. †

T. umbilicata, orbiculato-concava, depressa, tenuis, subdiaphana, griseo-flavicans, striata, subtus sublaevigata; spira convexa, apice concavo; anfr. 10; apertura obliqua, semilunaris; labrum crassum, album. — Diam. 16, alt. 5 mill. (O.)

Helix helicycloides Orb. synops. p. 6.

— — Orb. voy. p. 246. t. 28. f. 1—4.

— — Desh. in Fér. hist. p. 10. t. 69 B. f. 3.

Polygyra? helicycloides Beck ind. p. 23.

Habitat in republica Boliviana.

§. 75.

1057. *H. achatina* Gray.

T. sinistrorsa, latissime umbilicata, depressissima, discoidea, laevigata, superne rufa, albido maculata et flammata, basi pallida; spira plana, medio vix elevatiuscula; anfr. 6½ subplanulati, ultimus a latere subcompressus, antice subito deflexus; apertura subhorizontalis, oblongo-subcircularis; perist. fuscum, undique expansum et reflexum, marginibus lamina prominente, lamellam profunde intrantem emittente junctis. — Diam. maj. 34, min. 24, alt. 8½ mill. (Coll. Gray.)

Helix achatina Gray Mus.

— — Pfr. in Zeitschr. f. Mal. 1845. p. 86.

β. Minor: diam. maj. 23, min. 18, alt. 6 mill. (Coll. Nr. 641.)

Helix achatina Chemn. ed. II. Helix N. 398. t. 66. f. 28—30.

Habitat in America meridionali? (Gray.) Var. β specimina plura a Theod. Philippi prope Mergui imperii birmani lecta sunt.

1058. **H. refuga Gould.**

T. sinistrorsa, late umbilicata, subdiscoidea, superne plana, basi concava, solidula, oblique minute rugata et superne concentricè striata, alba, epidermide decidua, flavescenti-cornea induta; anfr. $6\frac{1}{2}$ angusti, centrales laevigati, nitidi, ultimus antice perdeflexus, basi subangulatus; apertura perobliqua, lunaris; perist. breviter et abrupte reflexum, albo-callosum, marginibus lamina subelevata S-formi, medio lamellam profunde intrantem emittente junctis. — Diam. maj. $17\frac{1}{2}$, min. $14\frac{2}{3}$, alt. 6 mill. (Mus. Cuming.)

Helix refuga Gould in sched. Cuming.

— — *Phil. Icon.* III. 17. p. 2. *Helix* t. 10. f. 4.

— — *Chemn. ed. II. Helix* N. 399. t. 66. f. 21 — 23.

Habitat in imperio birmano Indiae orientalis.

Obs. Praecedenti peraffinis, attamen sculptura, anfractu ultimo non compresso, apertura non horizontali, perist. abrupte reflexo distinguenda videtur.

1059. **H. Rivolii Deshayes.**

T. latissime umbilicata, oblongo-discoidea, superne plana, costato-striata, rufa, basi laevigata, nitidissima, olivacea; anfr. 5 convexiuseuli, angusti, utrinque subaequales, ultimus a latere compressus, basi inflatus, antice deflexus; apertura perobliqua, obtuse obcordata, antrorsum dilatata, subtubaeformis, intus margaritacea; perist. incrassatum, reflexum, marginibus callo albido, lamellam validam intrantem emittente junctis; fundus aperturae lamellis 3 — 4 subparallelis coarctatus. — Diam. maj. 23, min. $16\frac{1}{2}$, alt. 7 mill. (Mus. Cuming. et Coll. Nr. 641.)

Helix Rivolii Desh. in Enc. méth. II. p. 208. N. 2.

— *caribanata* Gray in Ann. of Phil. New ser. IX p. 440.

Polygyra? carabinata Beck ind. p. 23.

Habitat in insula Ceylon (Templeton in Mus. Cuming.), in India orientali, Ava (Beck).

1060. **H. pollodonta Orbigny. †**

T. umbilicata, orbiculata, depressa, crassa, regulariter striata, albida; spira subplana; anfr. 7; apertura obliqua, peristomata, ovalis, unidentata, intus continuata et primae quadrantis spirae aliis 4 dentibus connexa; labrum crassum, reflexum. — Diam. 9, alt. 3 mill. (O.)

Helix pollodonta (Helicodonta) *Orb. syn.* p. 3.

Helix pollodonta Orb. voy. p. 236. t. 23. f. 9—13.

— — Desh. in *Fér. hist.* p. 8. t. 69 C. f. 2—6.

Habitat in Boliviae provincia Lagunensi.

1061. **H. sculpturata** Gray.

T. late umbilicata, depressa, discoidea, concentricè confertim costata, interstitiis reticulato-striatis, albida; spira planulata; anfr. 5 convexiusculi, ultimus antice basi constrictus; apertura circularis, lamella intrante anfractus penultimi et 2 marginis dextri coarctata; perist. simplex, marginibus lamina porrecta callosa junctis, supcro subexpanso, basali reflexo. — Diam. maj. 8, min. 7, alt. $2\frac{1}{2}$ mill. (Mus. Brit.)

Helix sculpturata Gray in Mus. Brit.

— — Pfr. in *Zeitschr. f. Mal.* 1845. p. 86.

Habitat circa Damarha Africae meridionalis (Alexander).

§. 76.

1062. **H. heligmoidea** Orbigny.

T. latissime umbilicata, depressissima, discoidea, laevigata, luteo-cornea; spira planissima, medio subimpressa; anfr. 9 convexiusculi, utrinque aequales; apertura oblique semiovalis, sinuosa; perist. breviter reflexum, marginibus callo valido, dentiformi, triquetro junctis, supcro medio impresso, intus unidentato. — Diam. maj. 43, min. $44\frac{1}{2}$, alt. $3\frac{1}{2}$ mill. (Mus. Cuming.)

Helix heligmoidea Orb. synops. p. 2.

— *heligmoidea* Orb. voy. p. 237. t. 23. f. 4—4.

— — Desh. in *Fér. hist.* p. 5. t. 72. f. 42.

Polygyra heligmoidea Beck ind. p. 23.

Habitat in Columbiae prov. Guayaquil.

1063. **H. cereolus** Mühlfeldt.

T. late umbilicata, orbiculata, cornea, oblique costulata; spira planata; anfr. 7—8 superne angustissimi, subaequales, penultimus superne immersus, omnes basi conspicui, inaequaliter prominentes, ultimus superne carinatus; apertura reniformis; perist. simplex, angulatim reflexum, marginibus lamella dentiformi junctis. — Diam. maj. $8\frac{1}{2}$, min. $7\frac{1}{2}$, alt. 3 mill. (Coll. Nr. 642.)

Helix cereolus Mf. in Berl. Mag. VIII. 1848. p. 41. t. 2. f. 48.

Polygyra insularum Beek ind. p. 23?

β. Edentula: dente in pariete aperturali nullo.

Habitat in insula Cuba, ubi in palude horti botanici Havanensis ipse legi.

1067. **H. Dorfeuilleana** (Polygyra) Lea.

T. late umbilicata, nitida, rufo-cornea, superne brevissime conoidea, plicato-striata, inferne subinflata, laevigata; anfr. $5\frac{1}{2}$ convexiusculi, ultimus antice vix deflexus; apertura majuscula, tridentata: dente 1 lato, subquadrangulati, oblique intrante in pariete aperturali; perist. reflexum, album, dentibus 2 marginalibus intus munitum. — Diam. maj. 9, min. 8, alt. $4\frac{3}{4}$ mill. (Coll. Nr. 647.)

Polygyra Dorfeuilleana Lea obs. II. p. 107. t. 24. f. 118.

Helix Dorfeuilleana Chemn. ed. II. *Helix* N. 394. t. 65. f. 25—28.

— . . . *Fér.* hist. t. 69 D. f. 3?

Habitat in America boreali: Ohio (? Lea), Honduras (Dyson in Mus. Cuming).

Obs. Differt ab *H. texasiana*, cui similis, umbilico regulari (anfractu penultimo angusto, reliquis regularior decrescentibus, vix conspicuis), dente quadrangulati parietis aperturalis, etc.

1068. **H. cheilostropha** Orbigny. †

T. umbilicata, orbiculata, depressissima, striata, tenuis, albido-fulva; spira planissima, horizontalis; apertura triangulata, personata, tridentata; labrum crassum, reflexum. — Diam. 6, alt. 3 mill. (O.)

Helix cheilostropha (Helicodonta) Orb. syn. p. 3.

— — *Orb.* voy. p. 235. t. 23. f. 5—8.

— — *Desh.* in *Fér.* hist. p. 7. t. 69 D. f. 3.

Habitat in Boliviae prov. Santa Cruz de la Sierra.

1069. **H. diodonta Mühlfeldt.**

T. late umbilicata, discoidea, minutim granulato-striata, eorneo-fusea; anfr. $4\frac{1}{2}$ vix convexiusculi, ultimus subcarinatus, antee deflexus, ad aperturam constrictus, superne impressus; apertura subhorizontalis, panduraeformis; perist. acutum, reflexum, rubicundum, dentibus 2 oppositis in margine supero et infero munitum. — Diam. maj. $41\frac{1}{2}$, min. $9\frac{1}{3}$, alt. 4 mill. (Coll. Nr. 648.)

Helix diodonta Mf. in Mus. Caes. Vindob.

— — (*Helicodonta*) Fér. hist. t. 54 A. f. 4.

— — Rossm. I. p. 69. f. 49.

— — Lam. ed. Dh. 184. p. 446.

— — Chemn. ed. II. *Helix* N. 375. t. 64. f. 4—6.

Vortex didonta Beck ind. p. 29.

Gonostoma diodonta Held in Isis 1837. p. 945.

Habitat in Banatu prope Mehadia.

1070. **H. triaria Frivaldsky.**

T. perspective umbilicata, parva, depressa, cornea, eleganter costulata; spira convexa, obtusiuseula; anfr. 6 convexiuseuli, lente accrescentes, ultimus superne angulatus, subtus attenuatus; apertura perobliqua, sinuosa; perist. reflexum, labiatum, margine exteriore repando, intus unidentato. — Diam. maj. 5, min. $4\frac{1}{2}$, alt. $3\frac{1}{3}$ mill. (Coll. Nr. 649.)

Helix triaria (Friv.) Rossm. X. p. 13. f. 611.

— — Chemn. ed. II. *Helix* N. 396. t. 66. f. 43—46.

— Ocskayi Stentz in sched.

Habitat in Banatu Hungariae.

§. 77.

1071. **H. lusitanica Pfr.**

T. umbilicata, discoidea, fusca, suboblique confertim costulata; spira plana; anfr. $5\frac{1}{2}$, exteriores praecedentibus duplo latiores, ultimus antee non descendens; umbilicus mediocris, pervius; apertura lunaris; perist. album, angulatum reflexum, margine dextro sinuoso, columellari arcuato. — Diam. maj. 15, min. $13\frac{1}{2}$, alt. 6 mill. (Coll. Nr. 650.)

Helix lusitanica Pfr. Symb. I. p. 44.

— — Phil. Icon. I. 3. p. 50. t. 3. f. 8.

— — Morelet moll. du Port. p. 55. t. 6. f. 1.

— — Chemn. ed. II. *Helix* N. 374. t. 64. f. 40—42.

Habitat in Lusitania, prope Oporto (Fokkes), in montibus « du Gérez » (Morelet).

Obs. Hic conf. II. *circulus* Nr. 1054.

1072. **H. auridens Rang.**

T. anguste umbilicata, depressa, supra planiuscula, basi convexa, nigro-fusca, striata, pilis rigidis, brevibus, erectis, distantibus obsita; anfr. $4\frac{1}{2}$ convexi, rapide accrescentes, ultimus sensim descendens; apertura obliqua, subangulosa; perist. fusco-purpureum, reflexum, margine supero arcuato, dextro rectiusculo, intus dente aureo munito, basali subrecto, dente altero minuto, saepe deficiente, prope umbilicum instructo. — Diam. maj. $45\frac{1}{2}$, min. 13, alt. 8 mill. (Coll. Nr. 651.)

Helix auridens Rang in Guérin mag. 1834. t. 49.

— — Lam. ed. Dh. 247. p. 131.

— — Chemn. ed. II. Helix N. 373. t. 64. f. 4—3.

— . . . Fér. hist. t. 69 K. f. 8—12.

Habitat in insulae Martinique monte «Pelée».

1073. **H. tridentata Say.**

T. umbilicata, orbiculato-depressa, confertim costulato-striata, corneo-lutea vel fuscescens; spira brevissima; anfr. $5\frac{1}{2}$ convexiusculi, ultimus antice vix descendens; apertura lunaris, subtriangularis; perist. reflexum, album, intus callosum, marginibus conniventibus, callo tenui, dentem linguiformem, intrantem emittente junctis, dextro et basali unidentatis: dentibus inaequalibus, in ipso margine calli positis. — Diam. maj. 16, min. 14, alt. 8 mill. (Coll. Nr. 652.)

Helix tridentata Say in Nichols. Enc.; art. Conch.

— — (Helicodonta) Fér. pr. 105. Hist. t. 51. f. 3.

— — Wood suppl. t. 7. f. 11.

— — Lam. ed. Dh. 182. p. 115.

— — Gould report p. 173. f. 115.

— — Chemn. ed. II. Helix p. 84. N. 55. t. 10. f. 7. 8.

Tridopsis humula Rafin. (teste Fér.)

— — et *tridentata* Beck ind. p. 22.

Lister t. 92. f. 92.

β. Minor: diam. maj. 14, min. 12, alt. $6\frac{1}{3}$ mill. (Spec.)

Habitat in America boreali: Canada, Pennsylvania etc.

1074. **H. fallax Say.**

T. umbilicata, depresso-globosa, costulato-striata, corneo-lutea; spira convexa; anfr. 6 convexiusculi, ultimus antice deflexus, constrictus; apertura trisinuosa, dente parietis aperturalis magno, linguiformi, obliquo, arcuatim intrante coarctata; perist. reflexum, intus callosum, album, bidentatum: dente superiore

introrsum flexo, a margine remoto, altero subbasali. — Diam. maj. 43, min. 41, alt. $7\frac{1}{2}$ mill. (Coll. Nr. 653.)

Helix fallax Say in Philad. journ. V. p. 449.

— — Chemn. ed. II. Helix N. 376. t. 64. f. 7—9.

— *tridentata* var. Binn. in Bost. journ. III. p. 382. t. 48. f. 3.

β . Depressior: diam. 43, alt. 6 mill.

Habitat in Virginia et prope Philadelphia; var. β in Texas (coll. Menk.).

Obs. Differt a praecedente forma magis globulosa, umbilico angustiore, apertura magis coarctata et dentium inaequalium positione.

1075. *H. obvoluta* Müller.

T. umbilicata, orbiculata, utrinque plana, brunnea, opaca, pilosa; spira medio concava; anfr. 6 angusti, convexiusculi, penultimus prominulus, ultimus compressus, antice vix descendens, scrobiculatus; apertura obtuse triangularis; perist. reflexum, intus lilacinum, margine dextro et basali obtuse unidentatis. — Diam. maj. 43, min. 42, alt. 6 mill. (Coll. Nr. 654.)

Helix obvoluta Müll. verm. II. p. 27. N. 229.

Gonostoma holosericum Held in Isis 1837. p. 915.

β . Major, anfr. 5: diam. maj. 13, min. $11\frac{1}{2}$, alt. 6 mill. (Spec.)

Habitat in alpebus Helvetiae, Austriae, Styriae et Carinthiae (e. gr. in cacumine montis Ovir ad 6700' supra mare ipse legi!), in Silesia (Scholtz); var. β in fageto elevato prope Tharand Saxoniae frequens (Rm.).

1077. *H. angigyra* Ziegler.

T. umbilicata, orbiculata, superne concava, subtus plana, pallide cornea, nuda, superne minutissime punctulata et striolata; anfr. 6 convexi, ultimus compressus, antice gibbus, subito deflexus; apertura perobliqua, subtriangulato-lunaris; perist. reflexum, albido-labiatum. — Diam. maj. 11, min. 9, alt. $4\frac{1}{2}$ mill. (Coll. Nr. 656.)

Helix angigyra Zgl. Mus. Rossm. I. p. 70. f. 21*.

— — Chemn. ed. II. Helix N. 379. t. 64. f. 16—18.

— *Stentzii* Partsch in Mus. Caes. Vindob.

Vortex angigyra Beck p. 29.

Gonostoma angigyrum Held in Isis 1837. p. 915.

Trigonostoma angigyrum Hartm. Gast. I. p. 12. t. 5.

Habitat in Italia boreali et in Helvetia: ad Castagnole prope Lugano (Mousson, Htm.).

1078. *H. gyria* Roth. †

T. aperte umbilicata, orbiculata, valde depressa, supra plana, radiatim striata; spira demersa; anfr. 7 angusti, subaequales; basis convexiuscula, circa umbilicum angulata, laevis, tota nuda; apertura semilunaris; perist. reflexum; labium parvum. — Lat. $6\frac{1}{2}$, alt. $3\frac{1}{3}$ lin. (R.) — Diam. maj. 16, min. 14, alt. $6\frac{1}{2}$ mill. (ex ic.)

Helix gyria Roth diss. p. 16. t. 1. f. 17. 18.

Habitat ad Cacamò Cariae.

Obs. «Helici contortae Zgl. Rm. proxima; excellit tamen eo, quod spira non emergatur, immo recedat; quod basis minus complanata in angulum descendat; quod nullum pilorum et carinae vestigium inveniatur; denique magnitudine multo et laudatam speciem et alias affines (obvolutam, angigyram) superat.» (Roth l. c.)

1079. **H. plectostoma Benson.**

T. umbilicata, sinistrorsa, depresso-conoidea, subtus tumida, albida, epidermide cornea, decidua induta; spira exsertiuscula; anfr. 6 supra planati, radiatim plicati, lincis elevatis, confertis decussati, ultimus superne angulatus, lineis paucis elevatis infra angulum notatus; apertura lunaris, dente triangulari parietis aperturalis, saepe obsoletiore, coactata; umbilicus mediocris, subcylindricus, pervius; perist. album, breviter angulatim reflexum, marginibus callo junctis, supero antrorsum arcuato-dilatato. — Diam. maj. 9, min. 8, alt. $4\frac{2}{3}$ mill. (Coll. Nr. 657.)

Helix plectostoma Bens. in Journ. As. Soc. V. p. 354. *)

— — Pfr. Symb. III. p. 80.

— — Chemn. ed. II. Helix N. 380. t. 64. f. 19—24.

Habitat in regione septentrionali Bengaliae.

1080. **H. corcyrensis Partsch.**

T. aperte umbilicata, orbiculato-depressa, aretispira, supra costulato-striata, cornea, hispida; anfr. 7 convexiusculi, ultimus superne obtuse angulatus, subtus convexus, antice gibbus, deflexus; apertura parum obliqua, angusta, lunaris; perist. flexuosum, albo-labiatum, reflexum. — Diam. maj. 11, min. $9\frac{1}{2}$, alt. 5 mill. (Coll. Nr. 658.)

Helix corcyrensis Partsch in Mus. Caes. Vindob.

— — Desh. in Fér. hist. p. 21. t. 69 E. f. 4—5.

— — Chemn. ed. II. Helix N. 75. t. 46. f. 23. 24.

— *torsa* Zgl. olim.

— *barbata* a Fér. hist. t. 66. f. 3?

Caracollina corcyrensis Beck ind. p. 28.

β . Minor, apertura coactata, labro crassiore:

Helix girva Friv. in sched.

γ . Major, anfr. 8: diam. maj. 13, min. $11\frac{1}{3}$, alt. 6 mill. (Coll. Rocmer.)

Habitat in insula Corfu, var. β in Turcia, γ in ins. Lesina Dalmatiae.

1081. **H. canalifera Anton. †**

T. aperte umbilicata, orbiculato-convexa, dense striata, griseo-fusca; spira subelata; anfr. 6 angusti, ultimus praecedente

*) T. reversa, depresso-conoidea, subtus tumida; spira exsertiuscula; anfr. 5 supra planati, radiatim plicati, rugis transversis decussati, ultimus angulatus: angulo subtus marginato; apertura lunata, plica (ul in *H. personata*) interdum inconspicua, ultimo anfractui adhaerente; umbilicus profundus, anfractus plerosque exhibens. — Diam. 0. 35 paulo plus. — Similis *H. personatae* et *corcyrensi*. (Bens. l. c.)

vix latior, superne obtuse carinatus; apertura subcompressa, latior, quam alta; perist. reflexum, depressum, intus callosum, crassum, albidum, canali angusto cinctum. — Diam. 4, alt. 2 lin. (A.)

Helix canalifera Ant. Verz. p. 39. N. 1427.

— *ambliostoma* Parr. in sched.

Habitat in insula Corfu.

Obs. «Differt ab *H. coreyrensi* spira elatiore, carina plana, apertura angustiore et canali prope labrum». (Ant.) — An nihilominus ejus varietas?

Hel. hippocregis Pfr. *Mus. 1848. p. 119.*

1082. **H. Hindsii** Pfr.

T. anguste umbilicata, depressa, subtiliter striata, corneolutescens, diaphana, nitida; spira parum elevata; anfr. 5 planiusculi, ultimus basi convexior, antice superne deflexus, subtus constrictus; umbilicus pervius; apertura perobliqua, lunaris, ringens; perist. breviter reflexum, marginibus conniventibus, callo triangulari, dentiformi, bicruri junctis, dextro lamella subverticali, basali dentibus 2 acutis munito. — Diam. maj. 8, min. 7, alt. $\frac{1}{2}$ mill. (Coll. Nr. 659.)

Helix Hindsii Pfr. in Proc. Zool. Soc. 1845. p. 132.

— — *Chemn.* ed. II. *Helix* N. 386. t. 65. f. 7. 8.

Habitat in Mexico (Hinds), Texas (Sowerby).

Obs. Dentium formatione persimilis *H. ventrosulae* (conf. Nr. 1085.); differt magnitudine, umbilico regulari, pervio, anfractibus arctioribus, ultimo minus inflato, haud gibbo, etc.

1082'. **H. loricata** Gould. †

T. parva, depressa, flavo-viridis, arcte umbilicata, squamulis crescentiformibus undique loricata, subtus convexa; anfr. $5\frac{1}{2}$ convexiusculi, arcte voluti, ultimus superne ad peripheriam subangulatus; apertura contracta, lunata, trilobata, dente laterali, dente basali et dente columellari lamelliformi ringens; perist. album, reflexum, callo copioso conjunctum. — Lat. $\frac{1}{4}$, alt. $\frac{3}{10}$ poll. (G.)

Helix loricata Gould 1846. Exped. shells p. 17.

Habitat in California.

Obs. «Forma similis *H. inflectae*, sed minor, dentibus minus distinctis».

1083. **H. labyrinthica** Say.

T. umbilicata, conica, costulata, saturate rufa, subtus pallidior, laevigata, nitida; spira obtusa; anfr. 5—6 convexiusculi;

umbilicus angustus, pervius; apertura vix obliqua, lunaris; perist. breviter reflexum, simplex; paries aperturalis dente majusculo, lamelliformi, intrante et linea elevata, interdum obsoleta prope columellam munitus. — Diam. maj. $2\frac{1}{2}$, alt. $4\frac{2}{3}$ mill. (Coll. Nr. 660.)

Helix labyrinthica Say in Philad. journ. I. P. 1. p. 124.

— — (Helicodonta) Fér. pr. 111. Hist. t. 51 B. f. 1.

— — Binn. in Bost. journ. III. p. 393. t. 26. f. 1.

Helix Cupani Arad. et Magg. catal. p. 88.

— — *Phil. Sicil. II. p. 218.*

Habitat in Sicilia.

Obs. «Nonne status juvenilis et forte *H. apicinae*?»

1106. ***H. Deshayesii* Calcara. †**

T. minutissima, corneo-fulva, subtus late umbilicata; anfr. 4 convexiusculi, longitudinaliter elegantissime striato-costulati; labrum simplex, acutum. — Diam. $\frac{1}{5}$ liu.

Helix Deshayesii Calc. in: *Imparziale* N. 7. 1844. 15. Apr.

— — *Arad. et Magg. catal. p. 92.*

— — *Phil. Sicil. II. p. 218.*

Habitat in Sicilia; prope Palermo detexit Calcara.

Obs. An *H. pygmaeae* Drap. affinis? An ejus status juvenilis?

1107. ***H. Edgariana* (Carocolla) Lea. †**

T. supra subplana, subtus convexa, rufo-fusca, irregulariter striata, imperforata; spira brevis; suturae vix impressae; anfr. 5 planulati; apertura angustissima; columella dentem unicum longum et laminatum habens; labrum incrassatum, in medio incisum. (Lea.) — Dimens.?

Carocolla Edgariana in *Proc. Am. phil. Soc.* 1841. II. p. 34.

Habitat in America boreali: «Cumberland mountains», Tennessee.

1108. ***H. fasciata* Risso. †**

T. glabra, opaca; anfr. 6 lineis obliquis aequalibus impressis sculptis; epidermide crocea, fasciis transversis nigro-purpureo, ferrugineoque picta. — Long. 0,040.

Helicella fasciata Risso IV. p. 72. N. 158.

Habitat in Italia boreali: «Montagne d'Agel».

1109. ***H. ferruginea* Risso. †**

T. glabra, nitida; anfr. 5 sulcis aequalibus acquidistantibus sculptis, basilari ad sinistram lineolis transversis curvatis sculpto; apertura albida. — Long. 0,005. (R.)

Helicella ferruginea Risso IV. p. 72. N. 159.

Habitat circa Nizza.

1110. ***H. folliculata* Risso. †**

T. glabra, nitida, subpellucida; anfr. 6; epidermide griseo-lutescente, folliculis elevatis tecta; perist. carneo, pallido. — Long. 0,007.

Hygromia folliculata Risso IV. p. 67. N. 145.

Habitat circa Nizza in collibus et locis umbrosis.

1110*. **H. fornicata Gould. †**

T. parva, planorboidea, tenuis, dilute rufa, supra convexiuscula, infra concava, oblique ordinatim et confertim costato-striata; anfr. 4 convexi, ultimus ad peripheriam rotundatus; sutura profunda; apertura transversa, rotundato-elliptica. — Lat. $\frac{1}{4}$, alt. $\frac{1}{10}$ poll. (G.)

Helix fornicata Gould 1846. Exped. shells p. 21.

Habitat in insula Sandwich. Kauai.

Obs. Comparatur ab auctore cum *H. striatella* et *indentata*. — Umbilicus? Peristoma?

1111. **H. Gemmellarii Aradas et Maggiore. †**

T. subcompressa, longitudinaliter striata, umbilicata, alba, fulvo-fasciata, fasciis maculis fulvis saepe interruptis compositis; apertura ovata; labrum inferne reflexum, umbilicum non penitus obtegens, album intus marginatum; spira brevis, depressa; anfr. 4—5 laeviter subcarinati, superne planulati, primo excepto. — Diam. $9\frac{1}{3}$, alt. $4\frac{1}{5}$ lin. (A. et M.)

Helix Gemmellarii Arad. et Magg. catal. p. 75.

— — *Phil. Sicil.* II. p. 217.

Habitat in Sicilia, ubi unicum specimen in littore Catanensi invenit Aradas.

1111*. **H. hispida (Helicella) Risso. †**

T. glabra, nitida, pellucida; anfr. 6, striolis elevatis curvatis sculptis; epidermide cornea in spinulis elevata. — Long. 0,005. (R.)

Helicella hispida Risso IV. p. 72. N. 160.

Habitat circa Nizza.

1112. **H. hispidula Risso. †**

T. glabra, nitida, subpellucida; anfr. 5, striis transversis curvatis, basilari undulatis, sculpti; epidermis ferruginea, in spinulis elevata, fasciis transversis nigrescentibus ornata. — Long. 0,005. (R.)

Helicella hispidula Risso IV. p. 73. N. 161.

Habitat in collibus circa Nizza.

1113. **H. incisa Chemnitz. †**

Helix olivacea Risso hist. IV. p. 63. N. 436.

Habitat in vallibus umbrosis circa Nizza.

1121. **H. oregonensis Lea. †**

T. subcarinata, tenuis, laevis, rufo-fusca, ad carinam bifasciata, superne subconvexa, inferne subinflata. — Diam. 0,6, long. 0,4 poll. (L.) — Diam. 45, alt. 9 mill. (ex ic.)

Helix oregonensis Lea obs. II. p. 100. t. 23. f. 85.

Habitat prope Wailamat, Oregon.

Obs. Specimen imperfectum, vix dignoscendum.

1122. **H. Petiti Cantraine.** †

T. convexo-lenticularis, subtus convexior, subperforata, acute carinata, striata irregulariterque granulata, luteo-fulva, fusco superne inferneque unifasciata; apertura angustata, sublinearis, obliqua, lactea, intus marginata; labium dente vel callo munitum; perist. simplex; anfr. 6. — Diam. $3\frac{1}{2}$ lin. (C.)

Helix Petiti Cantr. Malac. p. 130. t. 13. f. 2. (tabula deest.)

Habitat prope Palernio. (??)

Obs. «Simillima Carocollae spinosae Lea.»

1123. **H. polita Müller.** †

T. umbilicata, subdepressa, subcarinata, striata. — Diam. $2\frac{1}{2}$ lin. (M.)

Helix polita Müll. verm. II. p. 33. N. 235.

— *striatula* Linn. N. 659? (Müll.)

Habitat in ripis torrentum Lombardiac.

Descr. Müll. «T. convexa, candidissima, glaberrima, oculo armato argute striata, facie et statura H. hispidae. Umbilicus patulus. Apertura lunata. Anfractus 5».

Obs. *Helix striatula* Gmel. (p. 3613. N. 40.) e descriptione Linnaeana H. striatulae et Mülleriana H. politae composita est.

1124. **H. Prevostiana Risso.** †

T. glabra, pellucida, nitida; anfr. 6 valde convexi, striolis obliquis subcurvatis, impressis sculpti, interstitiis tenuissimis; sutura excavata; epidermis grisea, zonis eburneis et carneis longitudinaliter picta. — Long. 0,006. (R.)

Helicella Prevostiana Risso hist. IV. p. 73. N. 162.

Habitat in collibus circa Nizza.

1125. **H. radiata Müller.** †

T. perforata, subdepressa, striata, subtus convexa, radiata. — Diam. 40 lin. (M.)

Helix radiata Müll. verm. II. p. 23. N. 224.

— *radiata* Gmel. p. 3634. N. 73. (err. typ.)

Helicogena radiata Beck ind. p. 40.

Gualt. t. 2. f. 3?

List. t. 70. f. 69.

Petiv. Gazophyl. t. 104. f. 1.

} Müll.

Gronov. zooph. 3. p. 334. n. 1544. (Gmel.)

Habitat in Gallia meridionali.

Descr. Müll. «T. crassa, striis transversis elevatis, confertis, albo et rufo variegata, ita tamen ut spira major rufa, mino-

res maximam partem albae sint. Supra subdepressa, subtus convexa, fascia in margine et alia in medio, utraque alba, abrupta. Umbilicus foramen potius dicendus, in eo enim spirae vestigia inconspicua; strigae s. radii 6—7 albi ab hoc in paginam superiorem divergentes. Apertura lunata, absque labro. Testa intus tota alba.»

Obs. Species omnino dubia, ad quam Cl. Beck H. maculosam Bornii, nec Lam. refert. Conf. seq.

1126. *H. radiata* Risso. †

T. pellucida, spira moderatim elevata; anfr. 7, sulcis obliquis curvatis aequidistantibus sculpti; epidermis fuscescens fulva. — Long. 0,004. (R.)

Helicella radiata Risso hist. IV. p. 69. N. 454.

Helix radiata L. Gm. 3634. }
— — Müll. II. 224. } Risso.

Habitat « environs du Var. »

1127. *H. rubella* Risso. †

T. glabra, nitida, subpellucida; anfr. 6, lineolis elevatis transversis, paululum curvatis sculpti; epidermis cinerascens rubra. — Long. 0,011. (R.)

Theba rubella Risso hist. IV. p. 75. N. 469.

Habitat circa Nizza.

1127^a. *H. ruida* Gould. †

T. fragilis, obconica, oblique striata, epidermide tenui subconcentrice et confertissime rugosa induta, coloribus sordide viridibus marmorata, subtus valde convexa, perforata; anfr. 4½ planulati, ultimus superne angulatus; apertura lunata; labrum acutum ad umbilicum reflexum. — Lat. ½, alt. ⅔ poll. (G.)

Helix (Nanina) *ruida* Gould 1846. Exped. shells p. 24.

Habitat in insulis Feejee.

Obs. Descriptio e speciminibus minus adultis.

1128. *H. Schwerzenbachii* Calcare. †

T. minuta, orbicularis, tenuis, pellucida, glabra, corneofulva, late umbilicata; anfr. 3 convexi, ultimus magnus, inflatus; apertura rotundata, patula; labrum simplex, acutum. Diam. ⅓ lin. — Num adulta? (C.)

Helix Schwerzenbachii Calc. Giorn. lett. N. 226.

Helix Schwerzenbachii Arad. et Magg. catal. p. 38.

— — Phil. Sicil. II. p. 248.

Habitat in Sicilia, ubi invenit Calcara prope Palermo.

1128^a. **H. scorpion Gould. †**

T. rotundata, depressa, rubro-castanea, fasciis radiantibus atro-purpureis tessellata, subtus haud convexa; spira depressa; anfr. $4\frac{1}{2}$ convexi. — Lat. $\frac{3}{5}$, alt. $\frac{2}{5}$ poll. (G.)

Helix (Nanina) *scorpion* Gould 1846. Exped. shells p. 24.

Habitat in insulis Feejee.

Obs. Descriptio teste auctore ex icone testae alicujus Cyclotomati tigrino haud dissimilis facta.

1129. **H. striatula Linn. †**

T. subcarinata, umbilicata, convexa, striata, subtus gibbior; apertura subrotundo-lunata. — T. grisea, anfractibus transverse striatis; umbilicus patulus. (L.)

Helix striatula Linn. syst. ed. X. p. 768. N. 575. ed. XII. p. 1242. N. 659.

— — Gmel. p. 3645. N. 40.

— — Dillw. descr. cat. II. p. 892. N. 42.

Habitat Algiriae (Brander, Linn.)

Obs. Hanc speciem, primum a Collard des Cherres (Bull. Bord. IV. p. 98.) aliisque eum sequentibus ad H. lenticulam Fér. relatum, a Cl. Menke (Zeitschr. f. Mal. 1844. Dez. 1845. Jan.) ad H. amandam Rossm. (Caroc. limbatam Phil.) referendam esse affirmatur; attamen dubia remanere mihi videtur.

1129^a. **H. subtilissima Gould. †**

T. minuta, fragilissima, nitidissima, lenticularis, plano-convexa, imperforata; spira planulata; anfr. 5 plani, arcte voluti, ultimus acutissime carinatus; apertura . . . (fracta). — Lat. $\frac{1}{8}$, alt. $\frac{1}{16}$ poll. (G.)

Helix subtilissima Gould 1846. Exped. shells p. 24

Habitat in insula Mauai Sandwich.

1130. **H. tenuis Gmelin. †**

T. umbilicata, pellucida, cornea, transversim striata, convexa; anfr. 6 sensim decrescentes; apertura semilunaris. — Diam. 4—5 lin. (Gm.)

Helix tenuis Gmel. p. 3644. N. 488.

Schröt. Flussconch. t. 5. f. 32. (Gmel.

Helicella tenuis Beck ind. p. 6. N. 44.

Helix succineata Quorund. (Beck.)

Habitat in Germania (Beck).

1130^a. **H. tenuistriata** Binncy. †

T. umbilicata, depressa, carinata, albido-cornea; anfr. 7 oblique striati; apertura angusta, depressa; labrum subreflexum; basis convexa. — Diam. $\frac{1}{2}$ poll. (B.)

Helix tenuistriata Binn. in Bost. journ. IV. 1. 1842.

Habitat in statu Tennessee Americae borealis.

1131. **H. Usticensis** Calcara. †

T. orbicularis, subdepressa, conica, cinerea, fusco-maculata, longitudinaliter striata, lamellosa; anfr. 5, ultimus magnus, carinatus; apertura ovato-trigona; labrum simplex, acutum. — Diam. 5—6 lin. (C.)

Helix Usticensis Calc. in Giorn. lett. N. 226. p. 53.

— — *Arad. et Magg.* catal. p. 102.

— — *Phil. Sicil.* II. p. 249.

Habitat in insula Ustica, ubi detexit Calcara.

Obs. «Carocollae scilununtinae aut H. scabriusculae affinis, sed differt umbilico et labro. An specimina juvenilia?»

1132. **H. Zancellia** Testa. †

T. minima, conica, diaphana, tenuissima, lucida, umbilicata; anfr. convexi, superiores laevigati, albidi, inferiores costulati, flavescentes; apertura rotundata; labrum simplex versus umbilicum reflexum. — Diam. $\frac{1}{4}$ lin. (T.)

Helix Zancellia Testa in Oreteo 1842. N. 6.

— — *Arad. et Magg.* catal. p. 102.

— — *Phil. Sicil.* II. p. 249.

Habitat in Sicilia, prope Palermo.

Obs. Quid sit *H. oculus capri* Linn. cd. X. N. 573. p. 768: «testa subcarinata umbilicata convexa, apertura marginata» nunquam forsitan erui poterit. Conf. Férussac prodr. p. 83.

Campylaea planospira Beck ind. p. 25. N. 15.

Habitat in Italia boreali et Gallia meridionali.

Obs. Species intermedia inter *Hel. hispanam* L. et *zonatam* Stud., nec non accedens ad *H. macrostomam* Mlf. Umbilicus multo angustior, spira magis elata, apertura minus obliqua, magis rotundata et peristoma brevius reflexum, quam in *hispana* et *macrostoma*. Ab *H. zonata* differt testa solida, depressa, marginibusque peristomatis minus convergentibus.
